Good Day Folks

I sent all the samples from this spring summer and fall soils to Dr Steven Siciliano of the University of Saskatchewan soil Toxicology program and asked them to review the soils and advise if we are able to release these soils to the City of Iqaluit to use for road construction.
The following risk assessment addresses the soils from our cell 3 (final cell).
I am forwarding this to you for review and am asking if there is anything we must do, or if there is anything we did not do before we approach the city of Iqaluit offering to release this soil to them.
Please advise
Thank you

JIM

Jim,

Attached is our risk assessment of your Cell 3 soils.

Steven Siciliano
