Subject: RE: Silvermet"s Muskox Camp (2BE-MSX) -date for compliance
Date: Tuesday, April 17, 2012 9:37:50 AM

Hi Rein,

I understand you are waiting on your contractor, however, I do require a date in order for you to meet the terms of compliance. If we designate Aug 31/12 as a reasonable (and final) date by which to have conducted clean-up and compliance activities, then this meets our requirements and an Inspector can verify at the end of the season. Are you agreeable to this date?
Melissa

Dear Melissa

I am waiting for confirmation from Kikiak on their timing and will get back to you as soon as I have it.

You pointed me to Part I, Paragraph 9, which indicates that reclamation of drill holes must include removal of any casing materials and the capping of holes with a permanent seal.

There were 26 drill holes. Of these, rods and casings were removed from23. In the case of 3 holes, some rods were lost or some casing could not be removed.

In all cases, the holes were left unplugged.

Gary Vivian of Aurora Geosciences sent me the following note:

No materials left in hole means that casing and drill rods were all removed. The only time a "plug" is required is when the hole allows ground water to seep out of it and you have to cap the hole with concrete, essentially plugging the hole. No casing or rods were left to stick up above the collar.
Could you help me reconcile these comments.
Best regards
Rein

Subject: Re: Silvermet's Muskox Camp (2BE-MSX)

Dear Rein,

I have had a chance to review your proposed plan and have several comments for incorporation:

-No actual date was set to meet outstanding requirements: Would **July 31/12** be an agreeable date for completion of site cleanups (ie. item #4 of your Plan), outstanding administrative requirements (ie. annual reports) and final reporting of reclamation activities (as per Part B, item 2 iv) of the water licence?

-For item #3, you refer to the "site" -you need to be more specific: which site(s) and gps location(s) were fuel drums removed from?

-For item #5, these items are agreeable, however item (a) also needs to address the water licence under Part D, items 4-6 & 10 (ie. documented authorization from the community of Kugluktuk prior to the backhauling of any waste, etc). Please note that the Kugluktuk municipal waste dump is not considered an "approved site" for the purposes of haz waste disposal. Please ensure you specify between actual disposal locations and staging areas (ie. to await backhaul to an approved site) and provide the records of disposal accordingly.

-For item #7, in terms of drill sites and reclamation, you need to ensure Part F, item 2 and Part I, item 9 are met. As well as coordinates, please provide photographic documentation of the condition these drill sites were left in. If reclamation is required, this info is to be provided as soon as possible to the Inspector, as well as documented in your final report.

-Please ensure there is a listing for all fuel caches and drill laydown areas, complete with coordinates and description of inventory removed as well as photographic documentation of clean up (both before/after where applicable).

Best regards,
Melissa

Dear Melissa

Please find attached a letter proposing our program to complete the reclamation work. I thought it

would be easiest to send by email but I can forward an original as well if you prefer. Please let me know when you are in receipt of the letter and whether this satisfies the requirements.

Best regards

Rein
