Subject:	RE: Discharge from PWSP nos. 1, 2 and 3 at Mary River Camp and PWSP at Milne Inlet Camp - Notification
Date:	Friday, June 01, 2012 3:02:38 PM

Hi Jim,

Notice of intent to discharge received. Provided discharge criteria meet compliance criteria, there are no issues on my end of things -look forward to reviewing the results.

Thank you,
Melissa

Good Day Melissa,

In accordance with Part D, Section 10 of our Water Licence 2BB-MRY1114, we are notifying you of our intention to commence discharge from PWSP nos. 1, 2 and 3 at the Mary River Camp (MRY-4a) and from the PWSP at the Milne Inlet Camp (MRY-5a). We will be collecting effluent water samples from these locations for water licence parameters in the near future, once the melt allows. We will forward these results to you prior to discharge. If the effluent is compliant, it is our intention to commence discharge immediately (early to mid-June). It is our intention to collect frequent samples for external analyses during discharge as well as to monitor flow using an inline flow meter. We have established a rigorous system of process sampling using our in house analytical capabilities that will consist of sampling effluent for field turbidity (hourly) and COD/ammonia/total phosphorus (daily). The results of this program will allow us to shut the discharge down prior to exceeding our water licence effluent criteria.

The high intensity sampling and monitoring that is planned significantly exceeds the requirements of the water licence and will therefore result in a high level of protection for the receiving environments.

By way of this e-mail, this report is also provided to QIA under Section 6.01 of Commercial Lease No. QI0C3001.

Please let me know if you have any questions or comments.

Kind regards,

Jim Millard, M.Sc., P.Geo.
