Good morning, Gary:

Part F, Item 1 of Licence 2BE-WPP1116 does not prohibit the establishment and use of a camp facility (to accommodate 10-15 persons as requested in the water licence application); therefore, Advanced Explorations Inc. (AEI) would not necessarily be required to amend the licence for this type of activity. Please note, however, that if AEI is contemplating changes to the camp capacity and water requirements, an amendment would be required.

With respect to the drill program, an amendment would not be required if the areas where the drill program is carried are within the project extents included on page ii of Licence 2BE-WPP1116.

On the question of a map of "potential" camp/drill areas as they become available, it is advisable that such information be provided.

If you have further questions, please do contact me at your earliest convenience
.

Regards,

Subject: West melville field work

Hi Sean,

We are currently finalizing our plans for summer field work on the west Melville area, for which we have NWB Licence #2BE-WPP1116. Our field work as currently planned involves fly camps (approx 4 people in size) initially, with the possibility of a larger camp and potentially drilling later in the summer. However, the larger camp and drill programs, if undertaken, will be contingent on geologic results from the fly camp work, as well as the level of financing required. All of this leads to my question: do you require a map of "potential" camp/drill areas as they become known?? I would also like to confirm that such camps, etc. would NOT require a licence amendment, as we

would be operating within the Terms and Conditions of the existing licence re camp size, water taking etc.

Best regards
Gary
