Subject:	Request from Licensee to Burn Untreated Wood - 3BC-BAF0919 & 3BC-DYE0919 Licence Locations
Date:	Monday, October 15, 2012 11:41:47 AM

Hi, Phyliss,

Regarding the subject request, winter weather has now arrived and rendered any actions impractical, for this calendar year. Will you please see the attached message traffic and consider granting permission for this activity to be performed sometime between June through August of 2013?

Thanks for your consideration of this request.

Regards,

Kim

Importance: High

Hi Kim,

I talked to George Gillis yesterday and winter has arrived at the sites so we won't be able to burn excess wood in 2012.

Would you please ask the NWB for permission to do the open burn during the June to August 2013 period. This will allow us to get a Fire Officer on-site at some point during the summer to supervise the burn.

Thanks very much,
Barb

Hi, Phyliss,

Pursuant to my request, please consider granting the permission for the months of September and October 2012, to account for weather delays and personnel availability.

Many thanks,

Kim

Subject: Request from Licensee to Burn Untreated Wood - 3BC-BAF0919 &
3BC-DYE0919 Licence Locations
Importance: High

Good morning, Phyllis,

I request the permission of the Nunavut Water Board for the open and controlled burning of caches of accumulated, untreated wood at the locations of Brevoort Island and Cape Dyer radar sites, during September of 2012, please.

Background information and justification of the request follows:

1. Type of wood items involved: Pallets and old crates. The wood is not treated and not painted.
2. Amount of wood involved: Approximately 5 tons at BAF-3 and a lesser amount at Cape Dyer.
3. When the burn would occur: Should permission is promptly received; burning will take place in September 2012.
4. Location of the open burn: For both locations, pits will be dug and the wood burned in the pit. Subsequently, the ash and remaining nails will be covered when the pits are filled in.
5. Rationale for open burning, (versus using the incinerator or retrograde): It will require an extraordinary amount of time and effort to gather up this amount of wood and cut it up, so that it would fit into the incinerator. Additionally, it would be challenging to break it down and bundle it for retrograde.
6. Fire safety: A Nasittuq Fire Officer will be on-site and oversee the burn to ensure that it is performed safely.

Thank you, for your consideration of this request.

Respectfully,

Kim
