Hello Andrew,

At FOX-M, Biogenie will set up a Water Treatment System (WTS) to treat the fuel contaminated water collected from the spill of 21 Jun 2013 from a ruptured flex line. The NWB has given approval for this on-site treatment, sampling of the treated water, analysis for the water license criteria (Part D, Item 10), and for discharge (if within criteria) from an existing discharge point of a Bermed Fuel Storage Facility.

The purpose of this e-mail is to give you the minimum 10 days notice of the discharge of treated water if results are within criteria. Biogenie will use hoses to pump the treated water over to an existing discharge point.

NWB Licence # : 3BC-FOH0919, Type B
Licensee: Dept of National Defence
Location: FOX-M North Warning System radar site,
Hall Beach, Qikiqtani Region, Nunavut
Discharge point for Berm of tank W22B, at summit near PGS building
Estimated volume of discharge (treated water) if results within limits: less than 90,000 L
Receiving area: Area north of the berm

Regards,
Barb in Iqaluit

Barb Thomson
