Subject: Licence NWB1NAN0208 – Possible Technical Meeting

Dear parties,

In its February 17, 2003 letter of response to Breakwater Resources Limited (“Breakwater”), the Nunavut Water Board (“NWB”) proposed to hold technical sessions to facilitate the review of submissions required under **Part G** of the above-cited water licence.

On January 30, 2003, the proponent, Breakwater, submitted to the NWB the following two documents for approval:

- (1) the Phase II Environmental Site Assessment (“ESA II”) required pursuant to Part G, Item 13 of the Licence; and
- (2) the Human Health and Ecological Risk Assessment (“HHERA”) required pursuant to Part G, Item 14 of the Licence.

The NWB suggests that it may be useful for interested parties to participate in a technical session to examine and discuss these two documents. The proposed time and location for this event is Friday, March 28, 2003 in Iqaluit. The time and location is thought to be appropriate as it coincides with the 7th International Symposium on Mining in the Arctic that begins on March 29.

The NWB would like interested parties to indicate, in writing, whether they support such a technical session as has been proposed, and if so, whether the date and location of the session are suitable. The scope and formality of the technical session will be determined by the degree of interest shown by parties.

The NWB requests that comments regarding this matter be submitted to the NWB Mine Reclamation Coordinator, nunavutwaterboard@nt.sympatico.ca by 5:00 pm m.s.t Friday, February 28, 2003.

Yours truly,

Patrick Duxbury, M.Sc.
Mine Reclamation Coordinator
Nunavut Water Board
