| PROJECT SPECIFICS | YES | NO | COMMENT |
| Part H Section 30 of Licence NWB1NAN0206 – Is it compliant? | Y | | Appears to be acceptable as the period of January 1 st to March 1 st has no effluent movement. Table 1 and the Licence indicate that sampling activities are reported at either quarterly or annual frequency. |
| Part B Item 6 (ix) <i>Annual Report</i> – Effluent and Water quality monitoring studies | | No | This document has not been submitted for 2002. The period covered by the licence beginning October 1 st will not likely have effluent concerns. Should this aspect be postponed until submission of the 2003 report? |
| | | | It is presumed that there was industrial water use that for the period of October 1 st to December 31 st . This has not been reported (to be included in 2003 Annual report?) <u>Yes the information should be included in the Annual report once submitted.</u> |
| Part D Item 9 | ? | ? | CanZinco was suppose to submit to the NWB a report identifying each Final Discharge Point on February 4 th , 2003. Was this submitted? Certain discharge points are cited in Table 1 – are these the result of this report? <u>If you look at the 'Status Report' nothing was received identifying the FDP as required by the Licensee in accordance with D9. The NWB has identified the known sites.</u> If missing this could be a critical point, as freshet has started at Nanisivik. |
| General Comments | | | From an examination of the Licence and Table 1, CanZinco's sampling reporting appears to be in order for the first quarter period. More information will be expected with the submission of the 2 nd quarter results due on August 14 th . <u>I agree that the August 14 results should identify results from Spring Freshet.</u> |
