POLARIS MINE

DECOMMISSIONING AND RECLAMATION PROGRESS REPORT

2nd QUARTER 2003

FOR THE

NUNAVUT WATER BOARD & INDIAN AND NORTHERN AFFAIRS CANADA

POLARIS MINE

DECOMMISSIONING AND RECLAMATION ACTIVITIES

QUARTERLY REPORTING – 2nd QUARTER 2003

SUBMITTED TO

THE NUNAVUT WATER BOARD

AND TO THE

DEPARTMENT OF INDIAN AND NORTHERN AFFAIRS CANADA

Date Submitted: August 28, 2003

DISTRIBUTION LIST

1. Nunavut Water Board - 2 copies
   Chief Administrative Officer
   Nunavut Water Board
   P.O. Box 119
   Gjoa Haven, NU X0B 1J0

2. Department of Indian Affairs and Northern Development – 1 copy
   Manager, Land Administration
   Department of Indian Affairs and Northern Development
   Box 100
   Iqaluit, NU X0A 0H0

3. Teck Cominco Metals Ltd. – 4 copies
   - Polaris Mine – John Knapp
   - Vancouver Office – Walter Kuit, Bob Hutchinson
   - Kimberley Office – Bruce Donald

4. Cascade Management Inc. - 1 copy
   John Lees
   Cascade Management Inc.
   Suite 203, 2225 Hanselman Court
   Saskatoon, Sask. S7L 6A8

Report Prepared by: Bruce Donald

TABLE OF CONTENTS

APPPENDICES

APPENDIX A	Executive Summary in Inuktitut
APPENDIX B	Update of Decommissioning and Reclamation Schedule
APPENDIX C	Update of Estimated Mine Decommissioning, Reclamation and Monitoring Costs
APPENDIX D	Record of Debris Placement into Little Red Dog Quarry Landfill
APPENDIX E	Placement of Metal and Hydrocarbon Contaminated Wastes Underground in the Mine
APPENDIX F	Thermistor Monitoring Data
APPENDIX G	Summary of Effluent Monitoring and Effluent Characterization
APPENDIX H	CD of Report in pdf Format

1. EXECUTIVE SUMMARY IN INUKTITUT

Refer to Appendix A for an executive summary of plans, reports and studies conducted under this licence during the period April 1, 2003 to June 30, 2003 that has been translated into Inuktitut.

2. INTRODUCTION

This is the second formal Decommissioning and Reclamation report submitted in relation to the Polaris Mine's Decommissioning and Reclamation Plan ('Closure Plan') and in compliance of the new Water Licence NWB1POL0311 issued on April 24, 2003 with and effective date of March 1, 2003.

The Polaris Closure Plan dated March 2001 received its initial conditional approved April 15, 2002. The Closure Plan was jointly conditionally approved by the Nunavut Water Board ('NWB') and the Department of Indian and Northern Affairs Canada ('INAC'). The Closure Plan has subsequently received further approvals. The approvals contain reporting requirements and this document has been prepared to consolidate all of the reporting requirements into one document. This report is being submitted to both NWB and INAC on a quarterly basis with an annual report completed by March 31st of the subsequent year.

3. STATUS OF AUTHORIZATIONS AND/OR APPROVALS

As of June 30, 2003, the status of project approvals were as follows:

1. Closure Plan
    a. The terrestrial portions of the Closure Plan were approved as of April 2002
    b. The approval of the proposal for decommissioning the Frustration Lake Freshwater System was outstanding. Under review by the NWB and INAC.
    c. The approval for the decommissioning of Garrow Lake dam by the NWB, INAC and DFO was outstanding.
    d. The application for the decommissioning of the marine dock and adjacent shoreline by the NWB, INAC and DFO was outstanding.
2. Polaris Water Licence Application
    a. Polaris Mine received it's new Water Licence NWB1POL0311 issued in April 2003 and effective as of March 1, 2003.
3. NIRB Screening of the Project
    a. The NIRB screening report for the project was reviewed by the Ministers of DFO and Indian Affairs and Northern Development ('DIAND'). On June 13th, 2003 the Ministers issued a letter stating that they were in agreement with the NIRB screening report and no further reviews of the project were required.
4. Application for an Authorization under the Fisheries Act to decommission Garrow Lake dam and to decommission the marine dock was submitted to DFO in October 2001. Approval of the application was pending at the end of the period.
5. Melt Water Disposal Authorization

a. On March 30th, 2003 Teck Cominco applied for authorization to dispose of site melt water by pumping it into the underground mine workings. On June 5, 2003 the NWB and INAC jointly approved Teck Cominco's request.

6. Landfill Operating Protocols
   a. On May 29, 2003 the NWB granted approval for the Landfill Operating Protocols submitted by Teck Cominco.

4. UNAUTHORIZED DISCHARGES AND SUMMARY OF FOLLOW UP ACTIONS

There were no unauthorized discharges of water or effluent during the 2nd Quarter of 2003.

5. PROGRESS REPORT OF STUDIES / PLANS REQUESTED

There were no reports requested by the NWB related to Polaris's Water Licence during the 2nd Quarter of 2003.

The Closure Plan requires submission of the following plans and/or reports:

1. Certified landfill cover design specifications and plans – the design work was completed at the end of the quarter but not submitted.
2. Certified design drawings and specifications for Garrow Lake Dam Decommissioning – the design work were complete at the end of the quarter but not submitted.
3. Certified specifications and design drawings for Sealing Mine Entrances – were commissioned but not complete at the end of the period.
4. Certified specifications and design drawings for Decommissioning the marine dock and adjacent shoreline – design work complete at the end of the period but not submitted.
5. Submission of Overall Schedule for the Closure Plan – Included in the March 2001 Closure Plan and an update of the schedule is attached in Appendix B of this report.

6. DECOMMISSIONING AND RECLAMATION PROGRESS REPORT

Manpower levels increased substantially during the period as the return of daylight and warmer weather permitted more outside activities. Manpower at began the period at 39 and increase steadily and by the end of the reporting period there were 126 people on site.

6.1. Earthworks

6.1.1. Dock and Shoreline

- Removal of the ship loader was completed.
- Glycol freeze pipes in dock cells 1 & 2 have been drained and removed.
- Glycol freeze pipes in dock cells 3 & 4 have been drained but the pipes remain in place.
- Excavation of clean fill above high tide level was initiated during the period in cells 1 & 2 (after removal of overlying metals contaminated fill).

6.1.2. Garrow Lake Dam

- Siphons were installed at the dam in preparation for siphoning water from Garrow Lake. There was no discharge from the lake during the period.

6.1.3. Operational Landfill

- Drilling and blasting of cover cap material in the New Quarry was undertaken during the period.
- Hauling and placing of the initial lifts of the cap material were underway at the end of the period.

6.1.4. Little Red Dog Quarry Landfill

- Refuse placement continued during the period. Refer to Section 12.1 of this report for additional information.
- Began construction of first lift of fill in LRD.

6.1.5. Exploration Waste Stockpile

- Prior to closure of the mine, Operations initiated the removal of the waste rock stockpile adjacent to the Exploration Portal. The waste pile contains metal sulphides.
- During the period delineation sampling was underway to define remaining sulphide contamination to be targeted for remediation.

6.2. Building Demolition

6.2.1. Mill / Offices / Warehouse Facilities on the Barge

- Shutdown operation of the primary powerhouse located on the barge and relocated electrical generating services to the Cat building adjacent to the barge.
- Completed bypassing of other services from the barge to facilitate demolition.
- Removal of interior structure and equipment was completed during the period.
- Removal of siding from the barge was completed during the period.
- Removal of the superstructure of the barge was partially complete at the end of the period.
- Completed draining fuel and glycol from the barge facilities.
- Cleaning of the hull fuel tanks was in progress at the end of the period.
- The contractor estimates that 75% of the barge has been demolished by the end of the period.
- Water run off diversion ditches were established and/or upgraded during the period. Melt water disposal into the mine was initiated.

6.2.2. Product Storage Building

- Approximately 60% of the siding accessible by equipment has been removed.
- Foundations have been exposed.
- Bin walls have been removed.
- Loadout pockets have been removed.
- The contractor estimates that 35% of the building demolition has been completed at the end of the period.

6.2.3. Thickener Building

- Attempts at removal of the earthen foundation indicated that additional thaw time required.
- Foundation removal is estimated to be 50% complete.

6.2.4. CRF Building

- Removed concrete floor slab.
- Remediation of hydrocarbon contaminated soils was completed.
- Demolition work in the area is now complete.

- General site grading of the area remains to be completed.

6.2.5. Accommodations Building

- No demolition as in active use.

6.2.6. Other Buildings / Structures

- Nothing to report.

6.3. Contaminated Soil Remediation

6.3.1. Marine Dock and Adjacent Foreshore

- Environmental sampling for glycol and metals contamination in the dock area was conducted during the period. No evidence of glycol contamination was found. Metals contamination was further delineated in preparation for excavation and disposal.
- Removal of metals contaminated soils in the dock area was completed during the period.
- In June, unexpected hydrocarbons (diesel fuel) were discovered in the dock cells 1 & 2. Delineation of the extent of contamination was underway at month end.

6.3.2. Fuel Bladder Storage Area

- Conducted extensive hydrocarbon delineation activities to better define boundaries of the known hydrocarbon contamination.
- The hydrocarbon contaminated soils were excavated and placed underground in the mine in accordance with the Closure Plan.
- Excavation of hydrocarbon contaminated soils was almost complete at the end of the period. Only minor quantities of soil remain to be excavated.
- Approximately 12,000 cu. m. were excavated close to originally forecast volumes.

6.3.3. Marine Foreshore – June 2002 Oil Spill

- Removal of residual hydrocarbon contaminated soils on the foreshore from the June 2002 oil spill was completed.
- Contaminated soils were placed underground in the mine.

6.4. General Site Cleanup

- Removing materials / containers from the general barge and Product Storage building in preparation for soils excavation.

6.5. Other Site Activities

- Approximately 50,000 liters of glycol and waste fuels have been incinerated to-date through the incinerator installed at the site.
- Setting up #1 & 2 foldaways as temporary shop facilities as the permanent shop located in the barge is being prepared for demolition.

7. UPDATE OF DECOMMISSIONING AND RECLAMATION SCHEDULE

Appendix B contains an updated decommissioning schedule current as of June 30, 2003. The source of the data for the schedule is primarily from our demolition contactor. There are some revisions to the near term portions of the schedule due to more detailed planning. The project is still forecast to be completed by the end of September of 2004.

8. UPDATE OF ESTIMATED MINE DECOMMISSIONING, RECLAMATION AND MONITORING COSTS

Appendix C contains the detailed estimate of Mine Closure Costs updated as of June 30, 2003 in accordance with Part B, Item 3 or Part G, Item 21 and forecasts of cost to the end of 2011.

In summary, total Mine Closure Costs to June 30, 2003 were $24,539,792. Estimated cost to complete decommissioning, reclamation and monitoring through to 2011 have increased to $53,860,906.

9. PUBLIC CONSULTATION / PARTICIPATION

No public consultation occurred during the period.

10. SUMMARY OF WORK DONE IN RESPONSE TO INSPECTION/COMPLIANCE REPORTS

There was not work required to be done in response to inspection/compliance reports.

11. FRESHWATER WATER USE

Freshwater use from Frustration Lake for all uses during the 2nd Quarter of 2003 was:

April 2003	15,855 cu. M.
May 2003	9,521 cu. M.
June 2003	3,712 cu. M.
Total 2nd Quarter	29,088 cu. M.
Total 1st Quarter	56,927 cu. M.
Total June 30 YTD	86,015 cu. M.

12. Physical Monitoring of Site

12.1. Placement of Demolition Debris into Landfills

The approval letter for Landfill protocols requires us to report with record of materials (preferably in digital form). Refer to Appendix D for a listing of demolition debris transported to LRD pit during the quarter and a drawing of disposal locations and a photographic log of the work during the period.

12.2. Placement of Metals / Hydrocarbon Contaminated Wastes Underground in the Mine

Excavation of contaminated soils in the Bladder Spill area identified in the Closure Plan was the focus of earth work activity in April and May. During the period approximately 13, 300 cu. m. of hydrocarbon contaminated soils were disposed of in the mine. The mine workings were coated with water prior to disposal of the hydrocarbon materials. In June, excavation of metals contaminated soils from the surface of the dock area was initiated. Approximately 15,200 cu. m. of metals contaminated soils were disposed of in the mine during the period. The volumes reported are approximate as they are based on truck counts. As remediation of areas

is completed, the areas will be surveyed to provide accurate volumes. Appendix E contains a series of drawings of the each mine level where materials have been placed. These drawings are dated August 22, 2003 and so indicate more recent data than the end of the period. The drawings also indicate the locations that other material types are stored in the mine workings such as tailings lines (refer to 960 Level drawing) which the Closure Plan specified would be disposed of in the mine.

12.3. Thermistors Data

12.3.1. Garrow Dam

Garrow Lake dam has three sets of thermistors that are recorded on a monthly basis. This will continue until Garrow Lake has been lowered to its original elevation. This data is reported in Appendix F.

12.3.2. Operational Landfill

The Operational Landfill currently has four thermistors in operation and actively monitored. The Closure Plan indicates that a minimum of three will be maintained to confirm that freezing of the landfill has occurred.
Refer to Appendix F for Data

12.3.3. Little Red Dog Quarry Landfill

Heavy metal pipes have been installed in the pit bottom and will remain in place during the filling of Little Red Dog Quarry. Once placing of the debris is complete and the pipes are extended to their final elevation, thermistor strings will not be installed in the pipes. No thermistor readings will be available until that time as indicated in the approved monitoring plans.

13. GARROW LAKE STRATIGRAPHIC MONITORING

There was no monitoring of Garrow Lake required in the 2nd Quarter of 2003.

14. SUMMARY OF EFFLUENT MONITORING AND EFFLUENT CHARACTERIZATION

Appendix G contains the effluent monitoring results as required in Part H in the form set out in Schedule 6 of the Metal Mining Effluent Regulations.

15. OTHER DETAILS RELATED TO WATER USE OR WASTE DISPOSAL REQUESTED

Melt water was disposed of in the underground workings during June. The disposal location is shown on the 980 Level drawing enclosed in Appendix E.

NOTE #1 - Identified potential cost adjustments to above accounts based on end of period review of manhours and materials costs to date - Not yet distributed to applicable accounts.

APPENDIX D

RECORD OF DEBRIS

PLACEMENT INTO

LITTLE RED DOG QUARRY LANDFILL

PLACEMENT OF DEBRIS INTO LRD QUARRY LANDFILL

2nd QUARTER, 2003

DRAWING OF WASTE PLACEMENT

The following drawing indicates the areas where debris was placed each month during the 2nd quarter of 2003 (April 1, 2003 to June 30, 2003). The locations represent the final placement locations and not temporary staging areas. The drawing also includes locations of debris place prior to the beginning of the quarter where the debris was placed at the same elevation in the pit.

This drawing represents the Second Lift (L2) of debris in the pit. The Second Lift of the debris is being placed into Bench 6 of LRD Quarry. The drawing indicates a different colour for each lift, year, and month that the debris was placed. For example 'L2 – 2003 – 05' represents Lift 2, for the month of May, 2003.

RECORD OF WASTE SOURCE/VOLUME & TYPE

Following the diagram are records from each month showing the source of the debris, where it was placed, the quantity and the type of debris.

VERIFICATION OF HYDROCARBON REMOVAL

Stationary and Mobile Equipment usually contain sources of hydrocarbons such as lubrication oils, fuels, greases and/or hydraulic oil. Attached to this appendix are signoff sheets indicating equipment that contained hydrocarbons were cleaned and/or drained of the hydrocarbons. After the equipment was drained and/or cleaned, they were inspected by our prime contractor, the demolition subcontractor and an owner representative. Each representative signs the inspection sheet once it has been verified that the equipment has been adequately drained. The only equipment prepared during this quarter relates to the power house facilities on the barge.

PHOTOGRAPHIC RECORD

As specified in the Closure Plan, a photographic record of debris placement is being maintained. Attached to this appendix are pictures of typical debris being placed in LRD Quarry.

The weather was too cold for the hydraulic shearers and bailer to function properly until May. Debris shown has been further processed using the bailer for siding and shearers for heavier steel prior to final burial.

The pictures are included in chronological order. Comments related to some of the pictures are as follows:

Date	Comment
2003 05 09	Secondary shearing of debris is underway
2003 05 20	The trailer mounted bailing machine is now in operation
2003 05 30	Temporary stock piles have separated out some different material types into separate piles for easier handling/cutting up prior to burial
2003 06 01	Note the pipes in the picture. These are return lines and not tailings lines. Tailings lines are being disposed of underground as per the Closure Plan.
2003 06 01	Note the large cylindrical ball mills. They are made of heavy walled steel and are difficult to cut into small pieces.
2003 06 14	The ball mills have been placed on end with one end cut off. This will allow filling of them so there are no voids caused when they are buried.
2003 06 24	Melting of snow and rain starting to cause water to pond in the quarry. This is helping to fill voids within the fill and will quickly freeze along with the landfill.

APPENDIX G

SUMMARY OF

EFFLUENT MONITORING
AND
EFFLUENT CHARACTERIZATION

Bruce J. Donald
Reclamation Manager

August 14, 2003

Prairie & Northern Region
Environment Canada
Room 200, 4999 98th Ave.
Edmonton, AB T6B 2X3

Attention: Peter Blackall, Regional Director of Environmental Protection

Dear Sir;

Re: Polaris Mine – 2003 2nd Quarter Metal Mining Effluent Regulations Report

Despite having a designated discharge location for effluent identified under Section 9 of the MMER, there was no discharge from the Garrow Lake Tailings Impoundment Area during the period April 1st to June 30th of 2003. This will be the situation through most of each year. While there is no data to report other than that there was no effluent discharge, I have completed the monitoring report as required by the regulations and have attached it to this letter.

Please note that the Final Discharge Point referred to in Section 8.1.1 'Effluent' of the 2003, 1st Quarter report was missing the location of the Final Discharge Point. The Final Discharge Point for Garrow Lake siphons is geo referenced as 75° 22' 32" N, 97° 48' 37" W.

If you have any questions regarding the quarterly report or aspects of the application of the MMER to the Polaris Mine, please feel free to contact me at any time.

Yours truly,

Bruce Donald

POLARIS MINE – MMER MONITORING REPORT

2nd QUARTER 2003

APPENDIX A

i. Information specified by Section 8.1 of Reference Method EPS 1/Rm/13

APPENDIX B

i. Information specified by Section 8.1 of Reference Method EPS 1/Rm/14

APPENDIX C

i. Concentration & monthly mean concentrations of each deleterious substance of Schedule 4
ii. pH of the effluents samples as required by subsection 12(1)
iii. Description of sample collection method
iv. Total volume of effluent deposited during each month of the quarter as per section 19
v. Mass loading of the deleterious substances set out in Schedule 4 and as per section 20

APPENDIX D

i. Results of the effluent characterization as per paragraph 15(1)(a)

APPENDIX A

Reporting Requirements for Reference Method EPS 1/RM/13

Section 8.1.1 Effluent

i. Name & location of operation generating the effluent
   - Polaris Mine, Little Cornwallis Island, Nunavut
   - Final Discharge Point for Garrow Lake is geo referenced as 75° 22' 32" N, 97° 48' 37" W.

ii. Date & time of sampling
   - No sampling conducted as there was no effluent discharge during the quarter.

iii. Type of sample
   - No sampling conducted as there was no effluent discharge during the quarter

iv. Brief description of sampling point
   - Discharge point of siphon at Garrow Lake dam

v. Sampling method
   - No sampling conducted as there was no effluent discharge during the quarter

vi. Name of person submitting samples
   - No sampling conducted as there was no effluent discharge during the quarter

Section 8.1.2 Test Facilities and Conditions

i. Test type & method
   - No testing conducted as there was no effluent discharge during the quarter

ii. Indications of deviations from requirements in Sections 2 to 7 of Method EPS 1/RM/13
   - No deviations to report as there was no testing conducted during the quarter

iii. Name and city of testing laboratory
   - No laboratory used during the quarter

iv. Percent mortality of fish in stock tank(s)
   - None to report. There were no tests conducted during the period

v. Species of test organism
   - None to report as there were no tests conducted during the period

vi. Date and time for start of definitive test
   - None to report as there were no tests conducted during the period

vii. Person(s) performing the test and verifying the results
   - No tests performed during the quarter

viii. pH, temperature, dissolved oxygen, and conductivity of unadjusted, undiluted effluent
   - No data to report as there were no tests conducted during the period

ix. Confirmation that no adjustment of sample or solution pH occurred
   - No adjustment to report as there were no tests conducted during the period

x. Indication of aeration of test solutions before introduction of fish
   - None to report as there were no tests conducted during the period

xi. Concentrations and volumes tested
   - No data to report as there were no tests conducted during the period

xii. Measurements of dissolved oxygen, pH and temperature
   - No data to report as there were no tests conducted during the period

xiii. Number of fish added to each test vessel
   - No fish added as there were no tests conducted during the period

xiv. Mean and range of fork length of control fish at end of test
   - No data to report as there were no tests conducted during the period

xv. Mean wet weight of individual control fish at end of the test
   - No data to report as there were no tests conducted during the period

xvi. Estimated loading density of fish in test solutions
   - No data to report as there were no tests conducted during the period

Reporting Requirements for Reference Method EPS 1/RM/13 - Continued

Section 8.1.3 Results

i. Number of mortalities of fish in each test solution
   - None to report. No tests conducted during the period

ii. Number of control fish showing atypical/stressed behaviour
   - None to report. No tests conducted.

iii. Mean mortality rate in solutions of effluent and control water
   - None to report. No tests conducted

iv. Estimate of 96-h LC50 in multi-concentration tests
   - No data to report. No tests conducted

v. Most recent 96-h LC50 for reference toxicity test(s)
   - No data to report. No tests conducted

APPENDIX B

Reporting Requirements for Reference Method EPS 1/RM/14

Section 8.1.1 Effluent

i. Name & location of operation generating the effluent
   - Polaris Mine, Little Cornwallis Island, Nunavut
   - Final Discharge Point for Garrow Lake is geo referenced as 75° 22' 32" N, 97° 48' 37" W.

ii. Date & time of sampling
   - No sampling conducted as there was no effluent discharge during the quarter.

iii. Type of sample
   - No sampling conducted as there was no effluent discharge during the quarter

iv. Brief description of sampling point
   - Discharge point of siphon at Garrow Lake dam

v. Sampling method
   - No sampling conducted as there was no effluent discharge during the quarter

vi. Name of person submitting samples
   - No sampling conducted as there was no effluent discharge during the quarter

Section 8.1.2 Test Facilities and Conditions

i. Test type & method
   - No testing conducted as there was no effluent discharge during the quarter

ii. Indications of deviations from requirements in Sections 2 to 7 of Method EPS 1/RM/13
   - No deviations to report as there was no testing conducted during the quarter

iii. Name and city of testing laboratory
   - No laboratory used during the quarter

iv. Species of test organism
   - None to report as there were no tests conducted during the period

v. Date and time for start of definitive test
   - None to report as there were no tests conducted during the period

vi. Person(s) performing the test and verifying the results
   - No tests performed during the quarter

vii. pH, temperature, dissolved oxygen, and conductivity of unadjusted, undiluted effluent
   - No data to report as there were no tests conducted during the period

viii. Confirmation that no adjustment of sample or solution pH occurred
   - No adjustment to report as there were no tests conducted during the period

ix. Indication of any adjustment of hardness of effluent sample
   - No adjustment to report as there were no tests conducted during the period

x. Indication of any aeration of sample
   - No indication to report as there were no tests conducted during the period

xi. Concentrations and volumes tested
   - No data to report as there were no tests conducted during the period

xii. Measurements of dissolved oxygen, pH and temperature
   - No data to report as there were no tests conducted during the period

xiii. Estimates of time to first brood, average number of neonates per brood, and percent mortality during the seven-day period prior to the test
   - No data to report as there were no tests conducted during the period

xiv. Number of neonates per test vessel and milliliters of solution per daphnid
   - No data to report as there were no tests conducted during the period

Reporting Requirements for Reference Method EPS 1/RM/14 - Continued

Section 8.1.3 Results

i. Number of dead and/or immobile daphnids in each test solution including controls
   - No data to report. No tests conducted during the period.

ii. For single-concentration test the number of daphnids dead in each of three replicate effluent solutions and in each of three replicate control solutions at end of test. Also report the mean value.
   - No data to report. No tests conducted during the period.

iii. Estimate of 48-h LC50 and 95% confidence limits in multi-concentration tests, 48-h EC50 for immobilization and 95% confidence limits, indication of statistical method on which results are based.
   - No data to report. No tests conducted during the period

iv. Most recent 48-h LC50 for reference toxicant test(s), reference chemical(s), date test initiated, historic geometric mean LC50 and warning limits.
   - No data to report. No tests conducted during the period.

All concentration in mg/L except Radium 226 which is Bq/L

Note [1] - Collection Method is either grap sample or composite sample

Note [2] - No effluent discharge to sample

MONTHLY MEAN CONCENTRATIONS OF EFFLUENT FOR MMER SCHEDULE 4

MONTH OF	MONTHLY MEAN CONCENTRATION OF DELETERIOUS SUBSTANCE[1]							
	Arsenic	Copper	Cyanide	Lead	Nickel	Zinc	TSS	Radium 226
April-03	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]
May-03	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]
June-03	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]	na[2]

All concentration in mg/L except Radium 226 which is Bq/L

Note[1] - Monthly Mean Concentrations - the MEAN value of the concentrations measured in all composite or grab samples collected from each final dishcarge measured during each month when a deleterious substance is deposited.

Note [2] - No effluent discharge to sample

MASS LOADING OF DELETERIOUS SUBSTANCE FOR EACH DAY SAMPLED

Sample Taken During The Week of	Date Sample Taken	DAILY MASS LOADING OF DELETERIOUS SUBSTANCE[1]								Flow Rate[2] (m^3/day)
		Arsenic	Copper	Cyanide	Lead	Nickel	Zinc	TSS	Radium 226	
07-Apr-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
14-Apr-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
21-Apr-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
28-Apr-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
05-May-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
12-May-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
19-May-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
26-May-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
02-Jun-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
09-Jun-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
16-Jun-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
23-Jun-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0
30-Jun-03	na[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0

Note[1] - Mass Loading is in kilograms per day of the deleterious substance deposited

Note[2] - Flow Rate must be taken at the same time as samples are effluent qualtity samples are taken

Note[3] - na refers to no effluent sampled due to no discharge of effluent

MASS LOADING PER CALENDAR MONTH FOR EACH DELETERIOUS SUBSTANCE

CALENDAR MONTH OF	MASS LOADING FOR DELETERIOUS SUBSTANCE (kg/month)[1]								Average Weekly Flow Rate[2]	Total Monthly Volume[3]
	Arsenic	Copper	Cyanide	Lead	Nickel	Zinc	TSS	Radium 226		
April-03	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0	0
May-03	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0	0
June-03	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0	0

Note[1] - Total Mass Loading for Calendar month calculated by multiplying the Total Calendar Month Volume x Average Daily Mass Loading for the Month - Refer to Section 20.(3)

Note[2] - Average Weekly Flow Rate - Average each of the weekly flow rates taken during the calendar month - Refer to Section 20.(3)

Note[3] - Total Monthly Volume calculated by multiplying 7 x Average Daily Flow Rate for the month x days in month

APPENDIX D

RESULTS OF EFFLUENT CHARACTERIZATION

AS PER PARAGRAPH 15(1)(a)

No effluent samples were collected during the 2nd Quarter of 2003 as there was no effluent discharge.
No Acute Lethality Testing conducted during the quarter as there was no effluent being discharged.

APPENDIX H

CD of the report
