Dear Carl and Phyllis;

Re: URS Report Regarding Lack of ARD Potential from Metals Contaminated Soils

In my email of January 28, 2004 I attached an electronic copy of the URS report (dated January 28, 2004) reviewing the ABA test results from the metals contaminated soils we sampled. In the email I indicated that I would forward a paper copy of this report and have enclosed it with this letter.

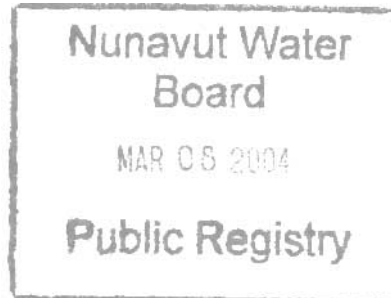

We appreciate the expeditious manner in which INAC and NWB responded to our request regarding disposal of the additional metals contaminated soils in the Little Red Dog Quarry Landfill (LRDQL). Work is already underway moving the stock piled metals contaminated soils into LRDQL as we had requested.

Yours truly,

Bruce Donald
Reclamation Manager
