To Whom It May Concern,

RE: Municipal Support for Soil Reclamation Land Farm – Baker Lake

The Municipality of Baker Lake is writing to reaffirm its strong support for the construction of a Soil Reclamation Land Farm within our community. This project is viewed as a key priority that will contribute to responsible environmental management, community development, and long-term sustainability.

A Soil Reclamation Land Farm will play an important role in addressing land use challenges, improving local environmental conditions, and supporting safe and effective soil treatment practices. The Municipality recognizes the value of this initiative in promoting environmental stewardship while also creating opportunities for local capacity building and future development.

On April 6, 2026, the Council of the Municipality of Baker Lake formally submitted a letter to the Minister of Environment requesting an update and confirmation regarding the status and timeline for the construction of the Soil Reclamation Land Farm. This correspondence reflects Council's continued interest in advancing this project and ensuring that it proceeds in a timely and coordinated manner.

The Municipality remains committed to supporting this initiative and working collaboratively with all relevant partners to move the project forward. We respectfully request continued communication and confirmation on next steps to ensure progress toward implementation.

Thank you for your attention to this important matter.

Sincerely,

Sheldon Dorey
Senior Administrative Officer
Municipality of Baker Lake

CC James Taipana - Mayor Municipality of Baker Lake
