Health and Safety highlights

ENVIRONMENTAL STEWARDSHIP

- © Over 1,013 acres were reclaimed world-wide
- There were no significant spills causing more than temporary effects
- * Less than 0.2% of discharges exceeded stringent permit levels.
- ® Permits for the new Ruby Hill mine were obtained in half the time typically required for projects of this type.

HEALTH AND SAFETY COMMITMENT

- There were zero fatal injuries for employees or contractors
- The lost-time injury rate was reduced by 11 percent for employees and contractors from the previous year
- The rate for all injuries was reduced by 15 percent for employees and contractors from the previous year.
- Construction of the Ruby Hill mine and operational facilities either employees or contractors. was completed in nine months with no lost-time injuries to

RECOGNITION

- # Homestake received the 1997 Excellence in Reclamation Award its efforts at the former Grants Uranium Mill. from the State of New Mexico's Mining and Minerals Division for
- * The Eskay Creek mine won the Western Regional Mine Rescue competition in British Columbia.
- \$ The Eskay Creek mine was recognized by the British Columbia Ministry of Energy and Mines, Ministry of Environment, Land, and Parks, and others for outstanding reclamation of exploration sites.

CONTINUOUS IMPROVEMENT

- ² More uniform standards for measuring environmental, health and safety performance were adopted.
- Eight comprehensive environmental, health and safety audits were performed at operations and corrective action implemented

The company and its contractors completed the year without a fatal injury, reduced their lost time injury above an already outstanding record is the result of the focused effort of not only management but of all rate by 11% and achieved a 15% improvement in the all injury rate. To achieve these improvements the employees.

President and CEO

We continued reclamation of the impacts of historic mining by others on property which we now own with the reclamation of a historic tungsten mine near Golconda, Nevada and the Wasp mill site near Lead, South Dakota. Regrettably there are also areas where we must and will renew and improve our focus and commitment to our objectives such as containment of process chemicals and prevention of wildlife contact with chemical solutions. This report, our fifth, describes some of our efforts to achieve excellence and the results. We have reported on both our successes and the areas where we will continue to focus on improvement.

1998 in the report for your information. Some are familiar and we have included some new ones that we believe are necessary. Environmental, health and safety excellence remains a primary objective for the company and we have included our goals for

We hope you find this report informative and useful and we welcome your questions and comments on the report and our environmental, health and safety performance. We encourage you to complete the enclosed response card to assist us in improving our performance and meeting your information needs.

You can obtain additional information on Homestake on our Web page and we urge you to visit there in the near future. http://www.homestake.com

Permitting a new mine is a significant challenge. In the 1980s, Homestake succeeded in permitting the Mineral Hill mine adjacent to Yellowstone Park and the McLaughlin mine in the three-county border between Napa, Yolo, and Lake Counties in Northern California. Many said these mines would be impossible to permit. Homestake's community "stakeholder" approach, also used at Mineral Hill and McLaughlin, was the foundation that led to the successful permitting of the Ruby Hill mine in Nevada in 1997.

Commitment Excellence

acquiring the information needed to plan a mining operation that would make a positive contribution to the community. We Long before the public hearings for the Ruby Hill environmental impact statement (EIS) were held in August 1995, we began

expanded our exploration efforts to include the collection of groundwater information and rock samples for analysis. Baseline environmental and cultural resource studies were initiated during the advanced exploration phase. Discussion with stakeholders were held during exploration and before mine design to determine their concerns.

Early in the planning process Homestake learned that housing and water rights would be critical issues. Thus, our proposal for the Ruby Hill project included plans to build housing before mine construction began. We ensured that neighboring landowners would not be affected by Ruby Hill's water requirements by acquiring water rights before the permitting process began. To promote open dialogue with local residents, we opened a Ruby Hill project office in Eureka, Nevada while conducting advanced exploration and published a regular newsletter on the project.

Homestake constructed the Ruby HIII mine and mill during 1997 with no lost-time injuries.

Constructed nests for Ferru

Our efforts bore fruit, when the final EIS for the Ruby Hill Project was issued within 17 months. The U.S. Bureau of Land Management cited Ruby Hill as a model of the way the environmental planning process should work. It's an approach that has continued to reap rich rewards at Ruby Hill. Following approval of the final EIS, construction of the mine and its ore-processing facilities began in earnest. Nine months later, Ruby Hill poured its first gold. This outstanding performance was accomplished with no lost-time injuries to Homestake employees or contractors.

Homestake's commitment to excellence is part of our culture. At Ruby Hill, as at every one of our operations, stringent monitoring, frequent inspections, regular environmental, health and safety audits, and annual review of performance goals support our commitment to continuous improvement.

HOMESTAKE (**)

— correlates directly with our long-term goals: to have no lost-time injuries. The above chart compares lost-time injury 1998 and added several, more ambitious, targets to the list. One of those new goals — to reduce the severity of injuries Homestake achieved many of its 1997 environmental, health and safety goals. We have renewed our commitment for rates and injury severity at the Homestake mine during the past three years. This is a trend we expect to achieve throughout the Company. One of our primary objectives is to maintain open communications with our stakeholders on environmental, health and safety management and respond to their concerns. We want to thank you, our readers, for your replies to last year's Environment, Health and Safety Report. We received more than 1,000 reader response cards and have incorporated many of your suggestions in the 1997 report. Once again, we welcome your thoughtful comments about Homestake's performance, policies, goals and other matters. I also encourage you to visit our website at http://www.homestake.com for regular updates on our environmental, health and safety activities and issues.

report on our performance during 1997 and our goals for 1998. Performance

Policies

Environment: Protect the environment and the natural resources under our stewardship.

Health and Safety: Protect public health, as well as provide each employee with a safe and healthy work place and to prevent accidents, work interruptions and damage to equipment and materials

Reclamation: Identify and implement practical measures to minimize the environmental effects of our activities and assure prudent stewardship and responsible use of natural resources in all of our business activities. Government Affairs: Establish positive and cooperative relationships with the government agencies that regulate our business and with legislative representatives. Provide accurate and consistent information and comply with all laws and regulations.

Prepare and implement appropriate and timely response plans for all audit findings. Report audit findings and the status Audits: Conduct regular independent environmental, health, safety and government affairs audits of all business activities of corrective actions to management and the Board of Directors.

combined with annual goal setting, have helped Homestake to improve its environmental performance year after year. In 1997, the Company invested more than \$13 million in environmental protection programs.

Homestake is committed to keeping its stakeholders informed and addressing their concerns during all phases of mine operations. Constructive relations initiated during the planning of each mine form the basis for continuing dialogue between Homestake, the communities where it does business, and the government agencies that regulate its operations. In 1997 Homestake hosted 57 community meetings at locations all over the world.

its meteorological monitoring program. While no one was injured, KCGM has modified its operating procedures and will improve When the exceedence occurred, the roaster had already been shut down for 1.5 hours. venture in Australia, where the sulphur dioxide limit was exceeded for 50 minutes in 1997. indicate that less than 0.2% of the discharges exceeded stringent permit levels. The most significant exceedence occurred at the Kalgoorlie Consolidated Gold Mining (KCGM) joint control systems and maintain compliance. Air emissions were monitored around the clock at 305 locations in 1997, and water discharges were monitored at 27 locations. The findings Environmental monitoring programs at each Homestake location gauge the effectiveness of

Design and management controls ensure protection of environmental quality at the Williams Mine, Ontario Canada.

1997

Electricit Propane Diesel Fuel Oil Gasoline Raw Wate

Routine monitoring is supplemented by internal inspection programs at each operation. Homestake personnel completed more than 800 inspections in 1997. Additionally, regulatory agencies conducted 65 environmental inspections, which resulted in four minor violations. Fines of \$1,525 for environmental noncompliance were paid in 1997.

Waste containment systems at every Homestake operation are designed with backup systems to minimize the potential for spills that may cause environmental damage. For that reason, spills rarely leave the site. Regrettably there were two such incidents in 1997, both at the Homestake mine, one of which killed 65 fish in Whitewood Creek. Both spills were self identified and reported. Biological assessment of the creek determined that disruption of biological systems from the spills was temporary and localized. Containment systems have been modified to prevent future occurrences.

One of Homestake's long standing goals is to have no chemical-related wildlife mortalities. During 1997, at Kalgoorlie Consolidated Gold Mines, eight birds were poisoned in a tailings pond. The operation is developing process modifications to render tailings solutions harmless to wildlife. Homestake moritors water and power consumption in an effort to conserve resources and control costs. The Company's recycling programs have grown steadily over the years. The tables present resource consumption rates, and recycling trends in 1997.

the environment. To ensure continuous environmental improvement, managers are assigned ambitious environmental goals and held accountable for their achievement. Through continuous improvement, Worldwide, Homestake mines are designed and operated to have minimal adverse effect on environmental excellence can be achieved.

SECRETARY.

ENERGY, MINERALS, AND

NATURAL RESOURCES

DEPARTMENT

KATHLESEN A

KATHLEEN A. GARLAND, DIRECTOR,

MINING AND MINERALS DIVISION

Homestake received the 1997 Excellence in Reclamation Award from the State of New Mexico's Mining and Minerals Division.

A Responsible stewardship of natural resources is the key to sustainable mining. Comprehensive planning, prior to mine development and at every stage in the life of a mine, helps Homestake to minimize environmental effects and restore lands to other productive uses. In 1997, Homestake spent more than \$15.6 million on reclamation projects.

Reclamation

Every mine site poses unique environmental challenges that call for innovative solutions. During the spring of 1997, ferruginous hawks raised their young in artificial nests that Homestake built to replace nests affected by mining activities at Ruby Hill. Nearby, public safety was improved and bat habitat was preserved by the construction of "bat gates" at the entrances to historic mines near Ruby Hill and the Pinson mines. In the desert surrounding the closed Santa Fe mine, water guzzlers were installed to provide drinking water for wildlife. The objective of a project initiated last year at the Agua de la Falda mine is to expand the habitat for chinchilla, formerly believed to be extinct in that area of Chile.

Timely reclamation of areas disturbed by mining is an important aspect of Homestake's environmental stewardship. Successful reclamation goes far beyond closing a mine and seeding the disturbed area. During the earliest planning stages of a new mine, Homestake scientists survey natural resources

Homestake continues to monitor and evaluate reclamation sites long after a mine is closed to to prepare for the day when operations cease and the land is restored to other productive uses.

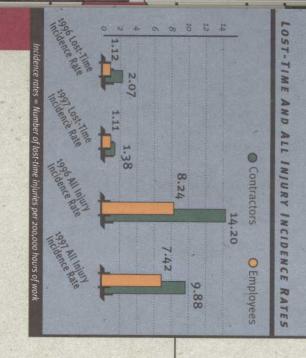

ensure achievement of its long-term objectives.

Exploration disturbance, typically comprising small drill sites and makeshift roads; are also subject to reclamation. In 1997, Homestake plugged or capped more than half of the surface exploratory holes drilled during the year.

to prevent erosion. Homestake's commitment to environmental stewardship is conduct an advanced radiological survey to identify tailings contamination at Homestake received the 1997 Excellence in Reclamation Award from the State evident in the actions taken to protect and enhance the natural environment. the mill site, removed contaminated surface soils and then stabilized the area protect the public and return lands to a viable post-mining land use" at the former Grants Uranium Mill. The Company used satellite technology to of New Mexico's Mining and Minerals Division for its "commitment to

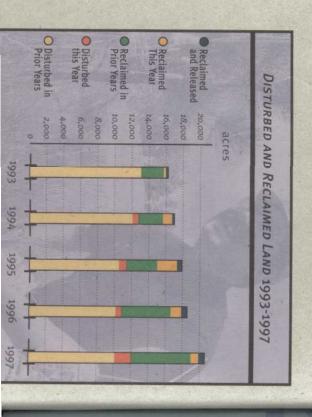

installed over underground entries to eliminate a public safety hazard environmental effects of historic mining by other operators. During trenches and shafts abandoned by earlier miners. In South Dakota, rehabilitate the historic Wasp mill site, an area previously affected by the Homestake mine spent over \$1 million to remove tailings and addition to grading and seeding disturbed areas, special gates were while allowing existing bat and owl populations continued access. Similarly, Kalgoorlie Consolidated Gold Mines spent \$574,000 in 1997, the Pinson mine reclaimed 116 acres disturbed by historic 1997 to rehabilitate historic mining sites, backfilling and fencing tungsten mining near the community of Golconda, Nevada. In In several instances, Homestake has taken steps to mitigate the another mining company on land now owned by Homestake.

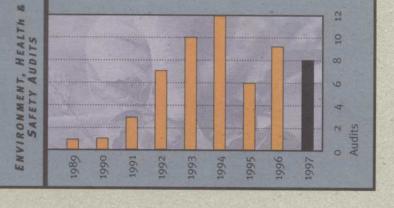

Annual performance goal setting and measurement is part of Homestake's culture of continuous improvement.

Performan

- During 1997 there were no fatalities for Homestake employees or contractors. Safety and health management systems that focus all employees on continuous improvement is one of Homestake's top priorities. The Company's health and safety achievement is a sign of its safety culture maturity and leadership in the mining industry.
- Lost-time injury frequencies during 1997 were reduced by 1 percent for employees and 33 percent for contractors compared to 1996. Homestake's goal is to have no lost-time injuries. This goal was realized at three operations in 1997, including Homestake's new Ruby
- · All work-related injuries were reduced by 10 percent for employees and 30 percent for contractors compared to 1996. Homestake's goal for 1997 was to reduce all work-related injuries by 5 percent. This goal was achieved by employees at eight operations and by contractors at eight operations.
- Homestake exceeded its reclamation goal of 500 acres, with 897 acres reclaimed at active and closed mines in 1997. An additional 116 acres were reclaimed at a historic tungsten mine near the community of Golconda, Nevada. This area, mined in the 1940s by another company, was acquired with the Pinson mine mineral leases.
- Four environmental violations were received from regulatory agencies in 1997 and 140 violations were received for health and safety issues. The most significant environmental violation for fugitive dust emission controls at Round Mountain resulted in a \$150 fine. Penalties for health and safety violations totaled \$4,735.
- Two minor incidents of wildlife mortality occurred during 1997. At
 Kalgoorlie Consolidated Gold Mining, in Western Australia, eight birds died
 in a tailings pond and at the Homestake mine, a tailings spill killed 65 trout
 in Whitewood Creek. (see discussion on page 9).

- Two chemical spills outside site containment systems occurred during 1997, both at the Homestake mine. Containment systems have been reviewed and improvements have been implemented to prevent future off-site spillage.
- safety performance. Uniform performance standards were reported in 1997 and will provide a baseline for future reporting. Homestake completed the first phase of adopting more uniform standards for measuring environmental, health and
- An analysis of Homestake's environmental, health and safety management systems against standards of the International Standards Organization (ISO 14000) was initiated during 1997. This comparison is expected to be completed during 1998.
- issues. Corporate officials monitor audit responses quarterly to ensure timely resolution of audit findings. • Eight comprehensive corporate environmental, health, and safety audits of operations were performed during 1997. Each operation has developed an audit response plan and is working to resolve remaining
- A third-party evaluation and review of the corporate environmental, health, and safety audit program was performed by Arthur D. Little. The results of that review are summarized on the next page of this report. Response to recommendations for improvement will be implemented during 1998.
- Half of Homestake's operations completed evaluations of their progress toward compliance with industry codes of conduct adopted by Homestake.

goal sons.

- · No fatal injuries.
- No lost-time injuries.
 Reduce all work-related injuries by 5 percent from 1997 levels.
- Reduce the severity of work-related injuries by 5 percent from 1997 levels.
- · Reclaim at least 500 acres.
- No environmental, health or safety regulatory violations.

- Operate all Homestake and joint-venture operations with no chemical spills outside site containment systems.
- Complete analysis of company environmental, health, and safety management systems against standards of the International Standards
 Organization (ISO 14000).
- Perform comprehensive corporate audits of environmental, health and safety management systems at six operating units and prepare
- Conduct a third-party evaluation of the corporate environmental, health, and safety audit program.
- Evaluate each operation for compliance with industry codes of conduct adopted by Homestake.
- Benchmark Homestake's environmental, health and safety management systems against other industry leaders.
- · Improve uniform standards for measuring

......... Independent Evaluation of Homestake Mining Company's Environment, Health, and Safety Audit Program

and our knowledge of internationally recognized EHS auditing standards. We conducted our evaluation relying upon our extensive those that aim to have a leadership position. consulting experience in this area as well as our familiarity with similar programs established by many other corporations, including the period of January 1, 1997, through December 31, 1997. Our evaluation is based on review of Homestake's EHS Audit Program Arthur D. Little, Inc., has reviewed the Environment, Health, and Safety (EHS) Audit Program at Homestake Mining Company for

the design and implementation of Homestake's EHS Audit Program is particularly strong when compared to others in its industry. sectors, auditing has only recently become an integral component of EHS management systems within the mining industry. As a result, number of instances exceeds, prevailing EHS auditing standards. Based on our experience in working with companies in many industry In our opinion, Homestake's EHS Audit Program is designed and implemented in a manner that is generally consistent with, and in a

Areas of particular strength include:

- Senior management is strongly supportive of the audit program; views it as an important component of the overall EHS program; and considers effective EHS management to be a core element of Homestake's overall business strategy
- The annual EHS goal setting process within Homestake is an effective means for ensuring full implementation of and continuous improvement in the audit program
- The audit program covers all operations, including joint ventures and inactive operations.
- The contracting of a third party to assess the audit program on an annual basis is a leading practice that demonstrates Homestake's commitment to continuous improvement.

In our report we provide specific recommendations to address each of these three areas Arthur D. Little has identified three areas for consideration to further strengthen Homestake's EHS Audit Program

- Expand the existing compliance verification aspect of Homestake's company-wide EHS management system.
- members and formalizing the existing on-site process for assessing risks and setting verification priorities Strengthen the on-site audit process by requiring additional advanced review and planning by the audit team
- to management on the status of response plan implementation. Modify the audit reporting process to provide additional detail on the evidence supporting negative-findings: request that sites provide more detailed responses to audit findings; and provide additional qualitative information

position within the mining industry. that Homestake will set in motion actions to further strengthen the EHS Audit Program and maintain its leadership We have discussed our recommendations for addressing these areas with Homestake management and are confident

un

Australia and Chile. The Company also has active exploration programs in Latin America and Eastern Europe. On April 30, 1998, Homestake acquired Plutonic Resources Limited, Australia's third-largest gold producer. This report does not reflect the acquisition Homestake is an international gold mining company with mining operations and exploration in the United States, Canada, of Plutonic.

Excluding Plutonic, Homestake produced 1,996,000 ounces of gold during 1997. Total assets at the end of 1997 were \$1,305 million and revenues for the year were \$633 million. Homestake employed more than 1,900 people at its mines, offices, and exploration sites worldwide in 1997. An additional 2,250 people were employed at Homestake joint ventures worldwide.
