

Land Farm Application Follow-up Information

The “Supplementary Information Requirements for Hydrocarbon Impacted Soil Storage and Land Farm Treatment Facilities” are noted to have been adopted in March 2005.

The project is in the process of preparing the detailed information relating to the land farm approval application and operation.

The schedule of activities is such that the first reports on treatability will not be available until the end of March. Therefore the project currently cannot provide additional information, at this time.

The information will be completed and made available to the Nunavut Water Board for review prior to construction beginning.
