NWB Annual Report Year being reported: 2020

License No: 1BR-EKA1734 Issued Date: September 22, 2017
Expiry Date: September 21, 2034

Project Name: FOX-C Ekalugad Fjord Long Term Monitoring

Licensee: Crown-Indigenous Relations and Northern Affairs Canada

(CIRNAC) Contaminated Sites

Mailing Address: PO Box 2200

Iqaluit NU X0A 0H0

Name of Company filing Annual Report (if different from Name of Licensee please clarify relationship between the two entities, if applicable):

N/A

General Background Information on the Project (*optional):

The FOX-C Intermediate Distant Early Warning (DEW) Line Site was constructed in 1957 and subsequently abandoned in 1963. It is located on the Northeast coast of Baffin Island on the south shore of Ekalugad Fjord and is approximately 240 km from Qikiqtarjuaq and 260 km from Clyde River. Remediation at the FOX-C site was completed between 2006-2008 and involved the construction of a non-hazardous waste landfill (NHWL), the only structure remaining onsite.

As per departmental commitments to monitor the NHWL post-closure, a 25-year long term monitoring (LTM) program was initiated at FOX-C in 2009 and includes visual inspection, groundwater sampling, soil sampling (as required), and natural environment monitoring. Refer to the FOX-C Ekalugad Fjord Long Term Monitoring Plan (2008) for additional information.

Years 1, 3, 5, 7, and 10 of the LTM program were completed in 2009, 2011, 2013, 2015, and 2018 respectively.

The next LTM event is scheduled for 2021 (Year 13) and future events will occur in 2023, 2028 and 2033 (Years 15, 20, and 25, respectively).

	N/A
Any ad	ditional comments or information for the Board to consider
	Physical observations of the NHWL conducted during the 2018 LTM event

indicate that the NHWL at FOX-C Ekalugad Fjord is in acceptable condition, is performing as designed, and is containing the enclosed waste. However, given the parameters reporting exceedances against the Federal Interim Groundwater Quality Guidelines (FIGQG) and the upper limit of acceptability (ULA) calculated, it is recommended to increase the frequency of monitoring compared to what was originally set out in the *FOX-C Ekalugad Fjord Long Term Monitoring Plan* (2008). The next monitoring event was scheduled to be at Year 15 (2023), but an additional site visit will be conducted at Year 13 (2021).
