

- 
33. Please describe incineration system if used on site. What types of wastes will be incinerated?

The types of waste that will be incinerated at the site consist primarily of domestic solid waste including food, paper and wood waste. These materials will be incinerated in a 205 L metal drum on a daily basis.

34. Where and how will non-combustible waste be disposed of? If in a municipality in Nunavut, has authorization been granted?

Non-combustible solid waste (glass and metal) will be containerized and stored at the site. This material will be included in the comprehensive remediation program scheduled to begin at the site in 2005.

35. Describe location (relative to water bodies and camp facilities) dimensions and volume, and freeboard for sumps (if applicable).

Not applicable.

36. Will leachate monitoring be done? What parameters will be sampled and analyzed, and at what frequency?

Not applicable.

## **OPERATION AND MAINTENANCE**

37. Have the water supply and waste treatment and disposal methods been used and proven in cold climate? What known O&M problems may occur? What contingency plans are in place?

All on-site activities are scheduled for the summer months (August and early September) when the average daily temperature is above freezing. The water and wastewater systems are very basic so it is unlikely that any O&M problems will occur as a result of the climate. Backup pumps will be available at site, if required.

## **ABANDONMENT AND RESTORATION**

38. Provide a detailed description of progressive and final abandonment and restoration activities at the site.

The camp will be decommissioned by the end of October, 2004. Decommissioning activities will include removal of tents, burning and/or removal of garbage, removal of equipment and general site clean-up. The site will be secured for human health and safety and environmental security.
