Dear Rita,

I'm sending the Nunavut Wildlife Management Board's comments and concerns regarding the above project. In the long run this project will improve wildlife habitat and health. Although, care must be taken not to do additional damage, while cleaning-up. Long term monitoring as identified in the proposal (UMA report, Section 3.4 and 12) is an essential part of this project.

As long as all the communities / HTO's relevant are informed and support the project, that permits, licenses and approvals required are granted, that all the regulatory and environmental guidelines outlined in the proposal are followed and that proper mitigation measures are technically and economically feasible, then I have no further concerns.

Best regards

Josée Galipeau

Wildlife Management Assistant
