

Water Use License NWB5HAL0308 – Amendment Application Summary

UMA Engineering Ltd. is applying to an amendment to the existing water use license NWB5HAL0308, which was issued for the clean up of the FOX-M, Hall Beach DEW Line site. The clean up has been on-going since 2003. Based on water usage information collected during the clean up program over the last two years, and the anticipated water usage needs for the continuation of the clean up, it is being requested that the licensed quantity of water allowed for extraction be increased. The current license allows for 30 cubic metres to be extracted daily from the water supply lake at FOX-M. The amendment application is requesting the licensed quantity of water allowed for extraction to be increased to 100 cubic metres per day, all from the water supply lake. It is expected that substantial completion of the clean up work will be in 2006, with final completion in 2007.
