Hi Eva,

I just wanted to summarize our earlier phone conversation today. The amendment application submitted for the FOX-Main Hall Beach DEW Line remediation project did not include sufficient information to determine the qualitative and quantitative effects of the proposed project to water. For a project of this scope, the application form itself provides only introductory information. In order to provide a recommendation to the Board regarding this licence amendment application, further information is necessary. Please be advised that a response letter will be issued at the end of this week that will identify additional information requested by the NWB. Hopefully this letter will provide you with sufficient additional guidance to complete a successful amendment application.

Thanks,

Matthew Hamp, B.Sc.
