

EXECUTIVE SUMMARY
2020/21 Annual Report for TC Licence No. 1BR-IAG1924
Iqaluit Airport Groundwater Monitoring Wells

On behalf of Transport Canada, BluMetric Environmental Ltd. supervised the decommissioning of three groundwater monitoring wells at the Iqaluit Airport on October 29th, 2020. Groundwater monitoring wells were partially excavated and PVC and metal well equipment were removed up to a depth of 30cm. Monitoring well holes were plugged with drilling clay so that surface water cannot travel below ground through the wells. The excavated holes were then filled and levelled. The equipment removal and leveling work was completed by Kudlik Construction Ltd. Photos of the work are included in the English well decommissioning report dated March 18th, 2021.

This work was carried out in accordance with the Nunavut Water Board (NWB) Licence requirements and the Abandonment and Restoration Plan submitted to the NWB.
