Thu, Jul 6,

Good afternoon,

I am following up regarding amendments to the water license for CAM-E (1BR-KEI1722). Please advise the status of the amendment requests submitted on June 16, 2017.

In addition, a discrepancy was noted in the current version of the license, pertaining to the discharge criteria for contact water, barrel water and demolition rinsate. In "Part D – Conditions Applying to Waste Disposal", item 11, discharge of site contact water was to be sampled for the following parameters:

Parameter	Maximum Allowable Concentration
pH	6.0 to 9.0 (pH units)
TSS	50
Oil and Grease	15 mg/L and no visible sheen
Total Lead	0.001 mg/L
Benzene	0.370 mg/L
Toluene	0.002 mg/L
Ethylbenzene	0.090 mg/L
Xylenes	0.18 mg/L

However, in "Part K – Conditions Applying to Monitoring Program", item 7, discharge of site contact water was to be analyzed for the following parameters:

pH	Conductivity
Total Suspended Solids	Ammonia Nitrogen
Nitrate – Nitrite	Oil and Grease (visual)
Total Phenols	Sulphate
Total Hardness	Total Alkalinity
Sodium	Potassium
Magnesium	Calcium
Chloride	Total Cadmium
Total Copper	Total Chromium
Total Iron	Total Lead
Total Mercury	Total Nickel
Total Zinc	Total Phosphorous
Total Aluminum	Total Manganese
Total Cobalt	Total Arsenic
Total Petroleum Hydrocarbons (TPH)	BOD <sub>5</sub>
Polycyclic Aromatic Hydrocarbons (PAH)	Total Coliform
Benzene, Toluene, Ethylbenzene, Xylene (BTEX)	

Considering there is no criteria associated with Part K, should we default to Part D? Please confirm.

Thank you,

Greg
