Subject: NWB5PEL0104 Spill Contingency/A&R/ QA-QC Plan Reviews

Good afternoon, all..

At present, I am completing the final tech reviews for the Spill Contingency, A&R and QA/QC Plans that were submitted by UMA Engineering in fulfillment of the requirement of water license NWB5PEL0104. At present, we have received no comments concerning these Plans. Before proceeding, I wanted to make sure that DIAND, Environment Canada and DFO had no concerns with these Plans. If possible, could you drop me a line in the next day or so to confirm this, as I wish to close these files, and incorporate the Approved Plans into the amendment requested by the Licensee, and which is presently being prepared for NWB5PEL0104.

If possible, could you provide by the close of business tomorrow any additional comments you may wish to make? That way, I can finish my tech reviews up this weekend, and wrap the NWB5PEL amendment up early next week.

Hope you all have a good weekend,

Jim
