---

Good Afternoon Natalie and Mark,

As the technical advisor reviewing your 1BR-SAR0607 CAM-F Scarpa Lake application, I would like to ask a few questions.

- How many people does INAC anticipate will be on site during monitoring?
- How long will personnel be on site?
- Will any additional waste be deposited on site?
- If so, does INAC want conditions for the disposal of human waste through latrine pits or will all waste be backhauled?
- Will any use of water be required other than that taken for sampling?

Thanks, hopefully this should speed up the review process and feel free to give a shout if you have any questions of your own.

---
