

## Environmental Working Group Summary of Recommendations

**Site:** CAM-3 (Shepherd Bay)

**Date:** May 11, 2009

**Report:** *"DEW Line Clean-up Project CAM-3 Shepherd Bay Baseline Landfill Monitoring Report 2008"* prepared by AECOM Canada Ltd.

### **Recommendations:**

(please refer to the Teleconference Meeting Minutes for further explanation of these recommendations)

#### North East Landfill:

- The EWG noted the maximum baseline concentration for TPH (1300 mg/kg) was higher than general background concentrations. All concentrations detected in the first year monitoring were below maximum baseline; the EWG recommends the trends of TPH concentrations be monitored.

Respectfully Submitted,

Nell van Walsum, M.Sc. P.Geo.

On behalf of the Environmental Working Group
