- b. such Modifications do not place the Licensee in contravention of the Licence or the Act;*
- c. the Board has not, during the sixty (60) days following notification of the proposed Modifications, informed the Licensee that review of the proposal will require more than sixty (60) days; and*
- d. the Board has not rejected the proposed Modifications.*

Based on the review, the NWB determined that the proposed bridge replacement, which the Hamlet confirmed would be similar to the damaged structure in terms of specifications, location, and footprint, is unlikely to impact the freshwater environment within the vicinity of the structure and/or generate waste types and quantities that are inconsistent to that originally permitted when the structure was initially constructed. In accordance with Part E, Item 1 of the Licence, the Board hereby provides this letter of authorization to the Licensee allowing for the reconstruction of the Duval River Crossing to occur in the context of a modification under the water licence.

The Licensee is advised that the activities allowed under the approved modification are limited to the proposed bridge reconstruction project as described in the Hamlet's above-mentioned correspondence. Any modifications in excess of and/or unrelated to the scope of activities outlined in the Hamlet's submission would constitute a separate potential modification or amendment that will require a separate review, consideration and/or approval by the Board.

To ensure that the bridge reconstruction project is carried out in a manner that is consistent with Licence No. 1BW-DUV1520 and/or is protective of the freshwater receiving environment, the Licensee is required to provide or address the following items:

- For-construction drawings issued for the bridge reconstruction, signed and stamped by an Engineer, must be provided to the Board for review at least **thirty (30) days** prior to commencement of construction activities;
- A Construction Summary Report that includes as-built drawings and plans of the modification, stamped by an Engineer, and other relevant information, must be submitted to the Board for review within **ninety (90) days** of completion of the Modification as required under Part E, Item 3 of the Licence;
- Monitoring shall be conducted in accordance with Part H of the Licence;
- A Construction Environmental Management Plan that includes among other elements, measures to address spills and protect areas within the project's footprint during construction activities must be submitted for review at least **thirty (30) days** prior to commencement of construction activities; and
- Fisheries and Oceans Canada relevant requirements must be addressed to ensure that potential impact to fish and fish habitat are prevented and/or minimized.

Should you have any questions, please do contact the NWB Licensing Department at 867-360-633 or by e-mail at licensing@nwb-oen.ca.

Regards
