<u>Redirection of Roadside Drainage Features - Hamlet of Pangnirtung, Nunavut - Small</u> Craft Harbour Development

Project Description

The project involves the redirection of an existing outlet drainage feature that currently outlets inside the existing harbour. This drainage feature is intermittent in nature, the outlet culverts can be seen in Photo 1. These works are required for the construction of the marshalling area, which is part of the Pangnirtung Harbour development. During the construction of the marshalling area, this drainage feature will be directed along an existing road and outlet into an existing culvert located next to the Hamlet of Pangnirtung offices. The drainage feature will be eventually directed through the marshalling area as described in the drawing titled – Conceptual Drainage Diversion Plan. The redirection of these roadside drainage features will be done during the construction season of 2009-2010.
