RE: Licence 1BH-RFS0910, Part E, Item 2, Addendum Required for “Rankin Inlet Fuel Facility Upgrade and Expansion, Tank Hydrostatic Testing Procedure”

Dear Mr. Losier:

The Nunavut Water Board (“NWB”) received and distributed for public comments on January 8, 2010, an addendum to the plan entitled “Rankin Inlet Fuel Storage Facility Upgrade and Expansion, Tank Hydrostatic Testing Procedure.”

Following the comment period, NWB staff reviewed the original Tank Testing Procedure document submitted on May 13, 2009, the addendum submitted on January 8, 2010, and comments received from interested parties then determined that the addendum did not satisfy the terms and conditions under Part E, Item 2 of Licence No. 1BH-RFS0910.

NWB requires the licensee to revise the addendum and submit within thirty (30) following the date on this letter to address the following:

1. Provide an explanation as to whether fresh water or salt water is to be used for conducting hydrostatic testing as suggested in item 5 of the procedure.
2. Item 6 of the Tank Testing Procedure stated that solids will be discharged to Repulse Bay. Provide an explanation as to the type of solids that will be discharged, testing that will be conducted prior to discharge, method of transport to Repulse Bay, and reasons for selecting Repulse Bay.

The Licensee is also reminded that the annual report required under Part B, Item 1, of the licence is due no later than March 31, of the year following the calendar year being reported.

Should you have any questions, please feel free to contact the undersigned at 867-360-6338 ext. 25 or by email at sjoseph@nunavutwaterboard.org.

Yours truly,
