Attn.: Ms. Wynet Smith - Lands Manager

RE: **196C104 Update of Activities**

Canamera Geological Ltd. would like to update the Kitikmeot Inuit Association of our exploration intentions of our "Muskox Project".

Canamera Geological Ltd. would like to re-establish our 6- 8 Weather Haven exploration camp in Inuit Withdrawal CO-52 / 86J (See attached map). We intend on conducting the following exploration activities based out of the existing camp:

- 1) Airborne and Ground Geophysics
- 2) Till Sampling
- 3) Exploration Drilling

The area of interest for these activities are outlined in the attached map, in addition, as the exploration drilling will be dependent on the geophysical and geochemical analysis, no targets are presently provided, however when the drill targets are identified, they will be forwarded to your office.

The crews will vary from approximately two to fifteen personnel. All materials and debris will be cleaned from site before closing the program down for the year.

All Terms and Conditions annexed to the aforementioned permit will apply to our operations this year.

We hope to start mobilization of crews and supplies in three weeks (~ May 18, 1998).

Thank you for your attention into this matter. If there are any questions or concerns, please contact the undersigned at (604) 984-7200.

Yours Sincerely,

CANAMERA GEOLOGICAL LTD.
