## SUMMARY REPORT

### **WATER LICENSE NWB2PHE0001**

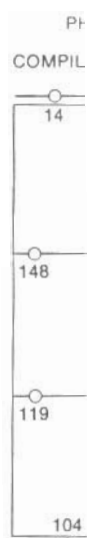

During the period April 25 – May 10, 2000 Phelps Dodge Corporation of Canada, Limited contracted Major Midwest Drilling to diamond drill on the NOK claims in the Nowyak Lake area of Nunavut. A total of 7 holes were drilled for total of 807.18 meters. Attached is a map showing the locations of the drill holes.

The drilling program used the two lakes to the north and west for sources of water. No fuel spills occurred with absorbent matting used around all machinery as a precaution. The field personnel camped at Navigator Exploration's camp at Nowyak Lake where the core was logged, sampled and now stored. Fuel was flown to the drill sites and all unused and empty barrels were removed as was all garbage and equipment. An inspection by Phelps Dodge personnel in September 2000 indicated that all drill sites were clean and only rock cuttings indicate where the drill holes were located.

In the opinion of Phelps Dodge, the exploration program caused no adverse environmental impact.
