

Figure 17:2 Proposed Contwoyto (CO-08) IOL Geophysical Grid Area, Proposed Base Camp and Possible Fly Camp Locations (NAD 27).

18. Provide flight altitudes and locations where flight altitudes are below 300m.

No airborne surveying is planned during the proposed program

Drilling

19. The number of drill holes and number of meters (provide estimates and maximums where possible).

At the point of permit submission, it is estimated that approximately up to 30 short drill holes will be collared. Approximately 2000 to 3000 metres of land based drilling will be planned. Most of the drilling will be undertaken during 2008 and 2009 due to the late start in 2007. In addition to the above drilling, several drill holes may potentially be planned on the ice surface of the East Arm of Contwoyto Lake within the federal GRR 1, 2 or 3 mineral claims (Figure 17:2).
