---

Good afternoon Ms. Baker – I have reviewed the submitted application and indications are that low flying will only be done while coming in for landings during supply and crew changes. The regional map, property map and work area maps show the lats and longs of where the activity will be focused. There is a non-technical project description provided with the application which explains what the project is. It is within the Kitikmeot region, 245 km east of Kugluktuk. If they use the High Lake camp as indicated in the questionnaire, the coordinates are 67 22 42N and 110 50 30W. The main focus of this exploration is prospecting, geological mapping, geophysical survey and drilling with the main deposit being Lithium which is used to produce batteries.

I hope this answers your questions. If I can be of further assistance, please contact our office.  
Regards,

---

Hello my comment on this is that on page 4, it indicates that low level flying will occur only for supply and crew changes. The company should be prepared to commit to low level flying only when necessary because it disturbs wildlife. Only doing what you would do anyway doesn't really strike me as a "mitigation measure" unless I'm missing something. I can't understand from the application what it is or where it is, I know they give a lat/long but there is no project description or map and it is a bit confusing. Are they inside the Kitikmeot land use plan? Is it for radioactive material or other minerals?

Thank you,

Alice Baker.
