☐ Industrial

☐ Mining

☐ Conservation

☒ Municipal (camp)

☐ Agricultural

☐ Recreational

☐ Power

☐ Other:

See Appendix C of the Guide for descriptions of classifications of undertakings.

**8. DESCRIPTION OF UNDERTAKING AND EQUIPMENT USED** – Provide a brief description of the undertaking including a description of any equipment that will be used in using water or depositing waste.

The Tehery-Wager Geoscience Project, part of the Federal Government's Geo-Mapping for Energy and Minerals Program, is a collaborative effort between the Geological Survey of Canada, the Canada-Nunavut Geoscience Office, and universities. The primary objectives are to increase the geological knowledge of the area and identify locations with elevated economic potential. The project will provide modern geological interpretations required to reduce exploration risk and make appropriate land-use decisions. Support from local communities is vital as goods and service contracts for fuel caching, expediting, wildlife monitors, and groceries will be needed.

A temporary tent-based camp will be set up along the Lorillard River between ~June 20 and June 26, 2016. The camp will consist of a kitchen, cold storage, office, shower, and individual sleeping tents. Field work will be conducted out of the base camp between ~June 27 and July 29, 2016 and will be supported by one helicopter and supplied once a week by Turbo Otter. The camp site will be demobilized between July 29 and August 15, 2016. Following demobilization, the site will be thoroughly cleaned and restored, to the extent practicable, to the state in which it was before its use.

Water will be used for cooking, drinking, and personal cleanliness. It will be pumped from the Lorillard River once or twice daily using a small portable gasoline pump with a water intake hose equipped with a screen of appropriate mesh size to ensure that there is no entrapment of fish. Clean water will be stored in 45 gallon

plastic containers. On average, we expect to use between 300 L and 600 L of potable water per day. Greywater will be disposed of in pits that will be dug at least 35 m from the high water mark of any water body and covered with fill on an as-needed basis. Similarly, pits for sewage disposal will be dug at least 35 m from a water source and downstream/downslope from the potable water source.

- 9. SCHEDULE** – Applicants are advised that approvals without a licence are issued for a one year term.

Proposed Start Date: 20 June 2016 Proposed Completion Date: 15 August 2016
