## PROJECT OVERVIEW

July 31, 1998

To: Distribution List via fax.

Re: **NIRB file no. 98C03N115**  
**Project: Exploration Campsite**  
**Proponent: Ashton Mining of Canada Inc.**  
**Region: West Kitikmeot**  
**Location: 65° 29' 15 N, 110° 16' 00 W**

---

### Project Overview:

Ashton Mining of Canada Incorporated would like to set up an 8 person camp at Contwoyto Lake in the West Kitikmeot. The set up of the camp would begin August 6, 1998 to September 13, 1998. The camp will support a regional sampling program to be undertaken on Ashton's Con claims. The program associated campsite is currently under KIA Land Use Permit I96C103.

The camp consists of five Weatherhaven type tents to house eight people. It is located along the eastern shore of Contwoyto Lake and is situated on an esker to minimize the potential impacts of vocal vegetation.

They anticipate that the campsite will have a minimal impact on the surrounding environment. Each tent has a footprint of approximately 20m<sup>2</sup> so the total footprint of the campsite should not exceed 150m<sup>2</sup>. As they intend to place the camp upon the esker, any effect upon vegetation should be minimized.

The camp will be supported by float-based twin engine Otter aircraft on a regular basis, a Bell 2056 Jet Ranger helicopter will be situated at the camp during its occupation.

### Proposed Waste Disposal Methods:

Combustible garbage will be properly stored and burned daily in a suitable container. Non-combustible garbage and debris including any metal waste will be removed from the site by aircraft.

Sewage and gray water will be deposited into a sump away from water courses. The sump will be restored to the natural contours of the land prior to expiry of the permit.

As this is initially a fly in/fly out operation, no large scale or long term storage of petroleum fuels will be required. They intent to store a maximum of nineteen 45 gallon drums of fuel at the campsite to support the camp and aircraft involved in the sampling program (Jet B aviation and diesel). Fuel at the campsite will be stored at safe distances (at least 12 metres away) from drainage systems and bodies of water.

Upon completion of the campsite, all material and equipment will be removed from the site. Any lands affected by the campsite will be restored, to the most reasonable extent possible, to their original and natural state. All sumps will be restored to the natural contours of the land prior to the expiry of the permit.

### 5. The Proponent's Public Consultation Process

Description of Proponent's Public Consultation Process:

To NIRB knowledge they contacted KIA and as a result have moved their camp to not block caribou migration on a "caribou highway"

Did proponent make use of traditional knowledge? ☐ Yes ☐ No  
(Please attach list of contact names and/or sources of TK)

Was information available in the community's preferred language? ☐ Yes ☒ No

In NIRB's opinion, was the proponent's public consultation adequate? ☐ Yes ☐ No

If no, explain why the proponent's consultation program was found deficient.

Proponent advised to consult with communities and provide results of consultation

### 6. Description of the Environment

Description of Biophysical Environment:

Barren-ground caribou, move along the east shore and cross the narrow sections of Contwoyo lake <sup>then</sup> on way to their winter range to the south and west. (Late July)

Description of Socio-Economic and Cultural Environment:

There is a permanent outpost camp on Contwoyo lake. Much of the harvesting activities are along Contwoyo lake towards Pettatt lake area. Winter traplines for Arctic fox extend along both sides of the lake and to NE. Major caribou hunts occur during spring and fall migrations. Wolves, wolverines and grizzly bears are hunted when encountered.

**7. NIRB's Consultation Process**

**10. Cumulative Environmental Effects**

Based on a comparison of effects identified in #8 and #9.

Matching Number(s)

Description of Cumulative Environmental Effects

possible impacts to Bathurst Caribou Herd  
 from numerous exploration activities  
 located in  
 in Kitikmeot, summer habitat and  
 along spring/fall migration routes.  
 Further studies are needed.  
 to determine the impacts

☒ Will the project make large demands on non-renewable energy sources?☐ Will the project encourage further developments within the current project or other developments (other similar projects, energy development, generation, petroleum development and extraction, the building of additional roads)? possibly☒ Will the project encourage a "boom-bust" economy over an economy of permanence?☒ Will the project encourage more wildlife harvesting on account of better access for hunters and fishers?☒ Will the project have an effect on the water quality of the watershed?☒ Will the project have a significant effect on existing land uses?**11. Mitigation Measures**

For each environmental effect identified in #8, #9 and #10, describe the required mitigation measures.

Number(s)  
(as identified  
in #8, #9 & #10)

Description of Mitigation Measures

See Screening Decision  
 Report Terms and Conditions

**12. Significance**

After taking into account the mitigation measures identified in #11, are any of the residual, adverse environmental effects significant?

☐ Yes ☒ No

If yes, identify which one(s) and proceed to #13; if no proceed to # 14.

Number(s) \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**13. Likelihood of Occurrence**

Of the significant, residual, adverse environmental effects identified in #12, are any likely to occur?

☐ Yes ☒ No

**14. Information Sources**

What sources of information were used in the screening process?

- ☐ local knowledge
- ☐ traditional ecological knowledge
- ☒ land use plans (and draft land use plans)
- ☒ authorizing agencies' data
- ☒ departmental or agency opinions
- ☒ maps
- ☐ photos
- ☐ reports (scientific, economic, social, or anthropological, archival or historical information)
- ☐ Nunavut Environmental Database (NED)
- ☐ personal communications
- ☐ Project Registry (NPC)
- ☒ previous similar projects
- ☐ service organizations
- ☐ media monitoring
- ☐ experts
- ☐ other \_\_\_\_\_

For information sources identified above, provide contact person and/or information location (for future follow-up): \_\_\_\_\_

**15. Staff Recommendations**

Staff Recommendations: (include rationale)

Project proposal should have little or no significant impacts to environment if terms and conditions are adhered to.

Prepared By:

JANDA EDWARDS  
Screeners

Date:

September 04/98.  
(yyyy-mm-dd)**16. NIRB'S Principles**

— The project has significant adverse effects on the ecosystem, wildlife habitat or Inuit harvesting activities.

— The project may have significant adverse socio-economic effects on northerners.

— The project will cause significant public concern.

— The project involves technological innovations for which the effects are unknown.

☒ The project **does not** have significant effects or concerns.

**17. Indication to the Minister (12.4.4)**

N.B. Transfer this information to Box 1: "EA Indication" and "Date of Indication".

- ☒ a) the proposal may be processed without a review under Part 5 or 6; NIRB may recommend specific terms and conditions to be attached to any approval, reflecting the primary objectives set out in Section 12.2.5;
- b) the proposal requires review under Part 5 or 6; NIRB shall identify particular issues or concerns which should be considered in such a review;
- c) the proposal is insufficiently developed to permit proper screening, and should be returned to the proponent for clarification; or
- d) the potential adverse impacts of the proposal are so unacceptable that it should be modified or abandoned.

**18. Terms and Conditions**

If the determination is 17 a), NIRB's recommended terms and conditions include:

*See Screening Decision Report  
Terms and Conditions*

**19. Authorization**

Approved By: \_\_\_\_\_

(NIRB Decision Maker)

Date: \_\_\_\_\_

*98-09-10*

(yyyy-mm-dd)

**20. Follow-up / Monitoring**

Minister's Determination

Action? \_\_\_\_\_

Minister agreed with NIRB's indication.

Action? \_\_\_\_\_

Minister varied NIRB's indication.

Action? \_\_\_\_\_

Minister rejected NIRB's indication.

If applicable,

Is a follow-up/monitoring program required? If yes, give details.

Has screening report information been added to NIRB's GIS/Calyx system?

Has screening report information been forwarded to NPC and NWB, for addition to their Project Registry?

Re: **NIRB 98C03N116**  
Ashton Mining of Canada Inc., Contwoyto Lake

The comments below have been passed on verbally through tours but are documented for the record in this letter. They are summarized in the attached comment form (good idea). All comments submitted to NIRB are the sum of a consultation team where time permits; the officer in the area is the lead and confers with HTOs (in this case Andy McMullen); routine reviewers include Brent Patterson, Regional Biologist, Donna Kenneally, Environmental Protection Officer, and Jane McMullen, Community Minerals Advisor. Many of the comments will be addressed through a protocol scenario discussed with NIRB and partners.

**Specific Comments:**

The original camp was located on a caribou "highway" but, in consultation with RWED, KIA suggested to Ashton that they move the site. The late and longs noted in the application show a move. This demonstrates how early dialogue is worthwhile with companies.

In the project overview attached to the application it is noted that: "Combustible garbage will be properly stored and burned daily in a suitable container." Proper incineration on an ongoing basis with no storage is recommended. RWED recommends use of 45 gal. incinerator kit to INCINERATE garbage, more effective than a straight burn to control garbage odours. Units are commercially available from Northern Services and Supply in YK. The company could also be provided with design by RWED to have them made locally.

It is also noted that the non-combustible wastes will be flown out. The destination site should be clarified and owners of the disposal site should be notified of the incoming waste.

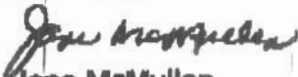

The overview notes that a sump will be used to handle sewage and grey water. No description of the sump is noted. Has capacity been considered? Will there be any treatment? Will the sump be routinely inspected and maintained?

The overview notes that fuel will be stored at safe distances from drainage systems. There is no mention of a spill plan or proper equipment to contain drips or remedy a spill.

Andy McMullen, RRO III, Kugluktuk, will contact Ashton directly to provide recommendations on bear deterrents.

Sincerely,

Jane McMullen  
Community Minerals Advisor

NUUNAVUT IMPACT REVIEW BOARD/NUUNAVUTIM KANGIHLIALLIANGHOT ELITTOHAYEDPLOTIK KATIMAVIT

## COMMENT FORM FOR NIRB SCREENINGS

The Nunavut Impact Review Board has a mandate to protect the integrity of the ecosystem for the existing and future residents of Nunavut. In order to assess the environmental and socio-economic impacts of project proposals, NIRB would like to hear your concerns, comments and suggestions about the following project application:

Project Title: EXPLORATION CAMP SITE  
 Proponent: ASHTON MINING LTD  
 Location: CONTWONTA LAKE NIRB#: 98C03N115  
 Comments Due By: SEPTEMBER 4 1998

Indicate your concerns about the project proposal below:

- |                                                                |                                                                            |
|----------------------------------------------------------------|----------------------------------------------------------------------------|
| <input type="checkbox"/> no concerns                           | <input type="checkbox"/> traditional uses of land                          |
| <input checked="" type="checkbox"/> water quality              | <input type="checkbox"/> fruit harvesting activities                       |

| <input type="checkbox"/> air quality                           | <input type="checkbox"/> local development in the area                     |
| <input checked="" type="checkbox"/> wildlife and their habitat | <input type="checkbox"/> tourism in the area                               |
| <input type="checkbox"/> marine mammals and their habitat      | <input type="checkbox"/> human health issues                               |
| <input type="checkbox"/> birds and their habitat               | <input type="checkbox"/> Other: _____                                      |
| <input type="checkbox"/> fish and their habitat                | <u>None. See attached letter.</u>                                          |
| <input type="checkbox"/> heritage resources in area            |                                                                            |

Please describe the concerns indicated above:

1. Water quality of dump for sewage - lack of info.  
 a) fuel - spill plan? equipment?  
 2. Wildlife - burning of garbage  
     - in grazely country  
 3. community - non-combustible destination

Do you have any suggestions or recommendations for this application?

- re: 1. water quality - plan & address routine mtn & operation  
     - plan for contingencies  
 2. wildlife - properly incinerate combustibles

Do you support the project proposal? YES ☒ NO ☐

Any additional comments?

Have moved site to accommodate caribou "highway".  
 As with all camps, will establish dialogue on bear deterrence.

(Jazz McMullen - email) (Kugluktuk)

Dear Jaida Edwards;

**Re: Land Use Application NIRB 98C03N115 - Ashton Mining Canada Inc. - Mineral Exploration  
Campsite - (West Kitikmeot) Contwoyto Lake, NT**

On behalf of the Environmental Protection Branch (EPB), Environment Canada, I have reviewed the information submitted with the above application.

EPB's contribution to your request for specialist advice is based primarily on the mandated responsibilities for the enforcement of Section 36 of the *Fisheries Act* and the *Canadian Environmental Protection Act* (CEPA). On the basis of the information provided, EPB believes that the above noted project has the potential to affect fish pursuant to the *Fisheries Act*.

**Comments and Recommendations**

1. The proponent shall ensure that any chemicals, fuel or wastes associated with the proposed project do not enter fishbearing waters. All wastes sumps and fuel caches should be located a minimum of one hundred (100) metres from the normal high water mark of any such waterbody or streams.
2. Slash, debris or sediment must be disposed of above the high water mark such that they do not enter any waterbody. Stream bank disturbances must be minimized, and all disturbed areas stabilized upon completion of the project.
3. EPB shall be advised of any material changes to plans or operations associated with this project.

Please do not hesitate to contact me at (867) 669-4736 or [wade.romanko@ec.gc.ca](mailto:wade.romanko@ec.gc.ca) with any questions or comments regarding the foregoing.

Yours truly,

Wade Romanko  
Aquatic Environmental Technician
