To: Richard Dwyer &lt;richard.dwyer@nwb-oen.ca&gt;

Hello Richard, the responses to KIA's comments are acceptable. However, the KIA did not find B2Gold Nunavut's response to DFO-NWB-02 and DFO-NWB-06 to be adequate for the following reasons.

- Response states fish screens will be used only in water bodies that support fish, and that Llama Lake and Umwelt Lake had all fish removed.
- Issue pertains to the fact that fish-out programs cannot guarantee 100% of fish are captured, so monitoring must take place during dewatering to identify and remove any remaining fish. This includes using fish screens to prevent entrainment or impingement of fish.

Thank you.

John
