

Employees are directed to the Mine Closure and Reclamation Plan included within this EPP as supporting document S10l for further information on procedures related to the closure and reclamation of the Doris North Project.

6.1 Environmental Sensitivities

The following are considered sensitive areas of environmental concern with relation to final closure and reclamation activity. Employees are directed to help in protecting these areas to the greatest degree possible by avoidance of human contact wherever possible and by following appropriate operating procedures when working in or around these areas:

- Adjacent water courses and water bodies;
- All tundra outside the mine facility footprint; and
- All wildlife

6.2 Environmental Concerns

The following are concerns associated with reclamation activities where special precautions need to be taken to protect the adjoining terrestrial and aquatic environment:

- The potential for contaminant release to surrounding environment
- Leaving or creating an unsafe environment for wildlife
- Causing permanent damage to the tundra; and
- Creating a condition that causes or results in an increased rate of erosion/sedimentation.

6.3 Sensitive Time Periods

Key sensitive time periods in relation to the activities in these areas are as follows;

- Contamination of aquatic ecosystems during spring runoff;
- Increased erosion and/or release of sediment during spring runoff; and
- Increased generation and release of dust from reclamation/demolition activities carried out during summer months.

6.4 Environmental Protection Procedures

Employees conducting reclamation work need to consult the Mine Closure and Reclamation Plan (Document S10l), the Emergency Response and Contingency Plan (Document S10a), and the Hazardous Materials Management Plan (Document S10e) to ensure that procedures relating to a response to a possible accident and/or spill and the handling of hazardous materials are understood and followed.

Section 6 – Closure and Decommissioning of Work Areas

Page 2 of 2

In addition employees carrying out reclamation work need to become familiar with the following procedures as appropriate. The following table provides where management measures are to be located within this EPP covering the listed key activities:

Activities	Impacts	Management Measures (See Sections 2 & Section 7 for details)
Demolition of infrastructure	<ul style="list-style-type: none"> • Generation of non-combustible solids waste • Generation of combustible solid waste • Potential for spills/leaks • Generation of hazardous materials • Dust • Erosion/Sedimentation 	<ul style="list-style-type: none"> • Section 2.4; Section 2.8 • Section 2.4 • Section 2.2; Section 7.1 • Section 2.2; Section 2.4 • Section 2.12 • Section 2.9
Sorting, packing & storage	<ul style="list-style-type: none"> • Generation of combustion wastes 	<ul style="list-style-type: none"> • Section 2.4; Section 2.8
Transportation hazardous wastes	<ul style="list-style-type: none"> • Spills/Leaks • Damage to tundra vegetation • Topsoil erosion/sedimentation 	<ul style="list-style-type: none"> • Section 2.2; Section 7.1 • Section 2.19 • Section 2.9
Transportation of petroleum products	<ul style="list-style-type: none"> • Spills/Leaks • Damage to tundra • Topsoil erosion/sedimentation 	<ul style="list-style-type: none"> • Section 2.2; Section 7.1 • Section 2.19 • Section 2.9
Transportation of non-combustible solid waste	<ul style="list-style-type: none"> • Damage to tundra • Topsoil erosion/sedimentation 	<ul style="list-style-type: none"> • Section 2.19 • Section 2.9
Land treatment	<ul style="list-style-type: none"> • Removing contaminated topsoil • Erosion/sedimentation 	<ul style="list-style-type: none"> • Section 2.5; Section 2.2 • Section 2.9
Land reclamation	<ul style="list-style-type: none"> • Spreading treated topsoil • Erosion/sedimentation • Dust • Reclamation/re-vegetation 	<ul style="list-style-type: none"> • Section 2.5 • Section 2.9 • Section 2.12 • Section 2.5
