Subject: Baseline Information on pH of Tundra Standing Water - Map of Sample Locations
Attachments: 01 - 1731773 tundra pH measurements.pdf

Steve:

In follow up to your request, attached is a preliminary drawing showing the approximate locations of where the samples were collected from for determining the pH of standing tundra water as reported under Item #14 on page 30 of the June 2007 Doris North Water License Pre-Hearing Technical Meeting Information supplement. The locations are approximate at this point and can be off by 100 to 200m. Golder is preparing a more accurate map using the provided GPS coordinates but due to vacations there is a backlog of GIS work in the Edmonton office and it may take a couple more weeks for us to get you a more accurate map. In the interim this gives you a close approximation of the sampling points as reported.
