

## Executive Summary: Rescan Supporting Memo

This memo provides some of the information requested by the Nunavut Water Board to help them evaluate the activities that are proposed for this Water Licence amendment application. This memo includes the following information:

- Environmental Setting and Baseline Conditions;
- Potential Environmental Effects and Cumulative Effects;
- Mitigation, Management, and Monitoring; and
- A List of Reports and Plans.

The areas associated with this amendment were developed adaptively through the use of site-specific fish habitat information and infrastructure planning. As a result, impact to fish habitat was avoided. There are no structures being placed within or across waterbodies, and there will be a minimum 30 m setback from all waterbodies. The proposed facility revisions will have a negligible effect on vegetation, aquatic ecosystems, and wildlife.
