Subject: FW: NWB File 2AM-DOH0713- HBML Amendment #3 - Waste Rock Ore Storage Management Plan
Date: Sunday, December 18, 2011 12:22:14 PM

Hi Dave and Phyllis

Please find below an email from Paula Smith at EC for the public registry regarding the subject file.

Cheers

Karlette

Hi Karlette,

I spoke with the EC expert who provided the comments in the EC submission which you discuss below. After reviewing the response from HBML, EC at this time doesn't have any further comments as they were to encourage a precautionary approach and due diligence by the proponent.

Thank you for your email following up on our submission and if you have any questions please don't hesitate to contact me.

All the best with your course work.

Paula

Subject: NWB File 2AM-DOH0713- HBML Amendment #3 - Waste Rock Ore Storage Management Plan
Importance: High

Hi Paula

HBML submitted the attached document to the NWB last week in response to parties concerns regarding their application for amendment #3 to WL 2AM-DOH0713 (including request for approval of Waste Rock and Ore Management Plan). Before bringing this file to the Board there are a few outstanding issues raised by EC that should be resolved including the following:

- (1) the geochemical sampling frequency for confirmatory testing of waste rock (diabase);
- (2) The interpretation of Mine Environment Neutral Drainage Prediction Manual (Price, 2009); and
- (3) The criteria for approving use of non-mineralized waste rock in construction (% S and NP).

I am wondering whether EC has had an opportunity to review HBML's December 7, 2011 response; whether EC is satisfied; or whether a teleconference is needed to discuss the matter further. I am working in the evenings and weekends this month, as I am doing some coursework so email is my primary method of contact. However, if you would like to touch base by phone, please let me know and we can set up a time.

Kind regards,
Karlette
