

Hey Jeff and Marg,

As promised please find attached some line work and 3D face files for the Doris-Windy AWR Bridge Abutments. Let me know if you have any troubles opening the files. Hope this helps.

On a side/ separate note I am looking for some as-built information for the Float plan Dock Access Road Widening work that has been completed (ie. For the road expansion connected to and south of the sed and pollution pond). I have a file named 'AB-MAIN RD CRUSH-110727' which details the surfacing material for the road widening/raise however, I am having troubles locating the ROQ survey data (ideally looking for the toes and crests as well as the points for the ROQ AB surface). Do you know if you happen to have some data on hand that you could send me for this area? Alternatively if you do not have this data then the main piece that I am looking for would be the ROQ toe line (where the ROQ and the OG intersect/ meet). Is there any way you would be able to quickly pick up the latter toe line for me?

Thanks for your time and continued support. I hope all is well.

Kind regards,

John

Subject: Windy Bridge 3D Models

Hey John,

I was wondering if I could get the model for bridges 1 and 2. I have the stake out points, but it is a lot easier to build DTMs and DXFs with the model. I was looking around share point and could not find it. I can probably make due for tonight's layout as we are just beginning to shape the abutments to grade. Going forward it would be great to have a 3D model for each project.

If it is on share point just let me know, I have a bit of trouble finding my way around on there.

Thanks

Jeff
