Re: Notice of Temporary Camp at Agnico Eagle Mines Limited's Hope Bay Mine

Dear Mr. Shaikh,

Agnico Eagle Mines Limited (Agnico Eagle) wishes to inform the Nunavut Water Board (NWB) of its intent to establish a temporary camp at the Hope Bay site, specifically located at Roberts Bay.

The temporary camp is required because of an accelerated demolition schedule at the Doris Camp to accommodate the restart of Hope Bay and upgrade of the Doris Camp. One of the former wings (F-Wing) was dismantled June 9, 2026 reducing the bed space available at Doris Camp.

To temporary camp at Roberts Bay will utilize the F-Wing, which has approximately 50 rooms. The location (Figure 1) of the building will be within the approved project footprint and the Commercial Lease boundaries. Further, the camp will respect the distance from the high-water mark, in addition to safe distance for fuel storage. Agnico Eagle would like to utilize the temporary camp location as soon as possible. We expect the use of the temporary camp until April 30, 2027. Should additional use be needed, Agnico Eagle will discuss with the NWB in advance.

Figure 1: Approximate Location of Temporary Camp in Roberts Bay

There are no foreseen water or waste management changes resulting from the addition of the camp at Roberts Bay. Water and waste can be managed accordingly without changes or new systems, and current Water Licence conditions will be met. All management plans for the site will continue to be adhered to.

Windy Lake will continue to be the source for freshwater. The water will be trucked to the temporary camp. The Water Licence freshwater consumption limit from Windy Lake is 43,800 m^3/year, and will not be exceeded. Based on past Windy Lake water consumption, Agnico Eagle has been below the Water Licence limit at 17,567 m^3 in 2025, and 18,844 m^3 as of August 30, 2026. As an example of water use for the temporary camp, assuming temporary camp use for 8 months (September-April), based on an occupancy of approximately 50 rooms at 0.22 m^3/day/person, this would amount to 2,640 m^3. Freshwater will be trucked to the temporary camp; freshwater consumption will continue to be tracked and recorded, and the Water Licence conditions will not be exceeded for total consumption from Windy Lake.

Sewage water will be pumped into a holding tank which will be emptied daily by vacuum truck and treated at the approved sewage treatment plant (STP). The STP has sufficient capacity to treat this water and will remain the same. Water Licence conditions will continue to be met.

There will be no kitchen at the temporary camp; thereby reducing the amount of domestic waste. However, a waste sorting area will be available within the camp; it is anticipated that one of the rooms in the camp will act as a location for this purpose. A daily pick-up service will be provided and containers for food waste, packaging, paper products; recyclable containers; batteries, electronics; and sharps will be established. These items will be managed at Doris Camp following the appropriate management practices.

Following the temporary use once the new camp wings are available, it is anticipated the building will be decommissioned and stored on-site should additional space be required in the future.

Sincerely,

Colleen Prather
