Re: 2AM-DOH1323 Notification of Discharge from Containment Facilities ST-4, ST-5, ST-6A, ST-6B

As per Part G, Item 1 of the Type A Water License 2AM-DOH1323, TMAC Resources Inc. is providing written notification to the Inspector prior to the anticipated discharge of accumulated water from the containment facilities located at the Doris North Project site.

Table 1. Containment Facility Estimated Discharge Volumes and Locations

SNP Monitoring Station	Estimated Discharge Volume (m³)	Discharge Point (UTM Nad 83)
ST-4	150	13W 0432450 7559600
ST-5	250	13W 0432960 7559270
ST-6A	200	13W 0432973 7563440
ST-6B	600	13W 0432730 7563200

Water will only be discharged to the tundra upon receipt of analytical results that comply with the water quality criteria outlined within the water license. Additionally, TMAC would like to request the use of compliant water for dust suppression on the Doris North Project roads and airstrip.

Should the analytical results exceed the maximum allowable concentrations applicable to each monitoring station, water will be directed to the Tailings Impoundment Area as per Part G, Item 25. (g). Discharge volumes and analytical results for each monitoring station will be provided in the monthly monitoring reports.

If you have any questions or require clarification on any of the information provided, please contact me.

Regards,

M. John Roberts

Vice-President Environmental Affairs

TMAC Resources Inc.
