Ms. Beaulieu

Further to recent correspondence and discussion, TMAC is pleased to submit our request to modify the existing Doris North Waste Rock and Ore Management Plan. This request seeks approval for the construction and use for waste rock storage, of a previously assessed infrastructure pad, Pad T, to the north of the Doris portal. The submission covers:

1. A letter requesting approval for Pad T,
2. A procedural history indicating it has been assessed in previous processes,
3. The revised Waste Rock and Ore Management Plan,
4. The engineering design brief for the proposed construction,
5. An estimate of closure costs and financial security,
6. Stability analysis for the pile, and
7. A low salt drilling procedure that will be used in the underground operations at the Doris Mine.

The attachment contains the complete package as one document. In a subsequent email we will forward the document as 5 megabyte pieces.

As TMAC wishes to proceed rapidly to commercial production in the safest and most efficient manner we hope that the Water Board can rapidly complete its review and grant approval of this request. We would be very pleased to provide additional information and/or meet to discuss the submission, if required.

Regards

John
