

No.	Project Certificate Term and Conditions Pertaining to Wildlife	Are the terms and conditions being met (Y/N)	Comments
3	Tahera should work with regulatory authorities to monitor caribou in and around the project area. This caribou monitoring should not duplicate the work underway by the other groups and authorities, for example for the Slave Geological Province, but instead will focus on the caribou migrating to the northern portion of the Slave Geological Province.		
9	Environmental effects of blasting on wildlife shall be kept to a minimum. Blasting can not occur if it affects in any way migrating caribou and birds or local carnivores.		
10	Tahera shall develop a plan with the GN to enhance wildlife data and to provide more details on caribou found in the project area. This work shall begin in 2004 with Tahera taking a lead role.		
11	In approving this project, NIRB encourages all regulatory authorities (i.e. federal, territorial and KIA) to study the cumulative effects of any associated projects (e.g. Bathurst Inlet Port and Road) on regional caribou movements.		
12	Tahera shall plan, construct, and operate their mine in such a way that caribou migration paths through the project area are protected. Maps of corridors shall be placed in site offices and upgraded as new information on corridors becomes available. This information shall be sent to NIRB's Monitoring Agent, GN and KIA.		
13	Tahera shall submit plans to regulatory authorities to include measures that will ensure caribou are not harmed, entrapped, or frightened by any project activity. Tahera shall do everything it can to ensure that caribou do not fall into pits, or slip on roads; this includes the requirement that Tahera use whatever it finds necessary including ramps and crossings to assist in the free movement of caribou and construction of berms or fences where appropriate to prevent accidents involving wildlife.		
14	Tahera shall take special care to avoid disturbing nesting sites of any species in the project lease areas. Sites within 500 metres of the project lease area should be also located, marked, and reported by Tahera to NIRB's Monitoring Agent.		
15	For the greater protection of wildlife, wildlife must have the right of way, and this principle must be strictly enforced. This means all activity including construction, drilling, blasting, and traffic movements, be stopped in the presence of susceptible raptors, ungulates, and carnivores.		
16	The highest protection shall be given to nesting and flightless birds or vulnerable wildlife including protection of all dens. Further, Tahera must submit a more detailed plan to NIRB's Monitoring Agent to list specific steps that Tahera will take to study and prevent losses of nests and eggs within the lease boundaries and a buffer zone 500 metres surrounding the lease boundaries.		
17	For safety and other reasons, there shall be no hunting of wildlife in the Project area and 500 metres outside the project lease boundaries.		
18	Problem wildlife shall be reported immediately to the GN and to the NIRB Monitoring Agent.
