PRESS RELEASE

FURTHER SIGNIFICANT DIAMOND RESULTS FROM TAHERA'S ANURI EAST KIMBERLITE

Toronto – Tuesday December 11, 2001

Tahera Corporation is pleased to report additional diamond results from the Anuri East kimberlite. The Anuri East kimberlite is located on the Rockinghorse Property in Nunavut, approximately 120 km northwest of Tahera's Jericho Claims. The region is rapidly emerging as a significant new diamond district in Canada following several recent diamondiferous kimberlite discoveries in the area.

The Rockinghorse Property is held under the Tahera / Kennecott Canada Exploration Inc. joint venture. Kennecott, a member of the Rio Tinto Group of companies, is the operator of the joint venture. Pursuant to the joint venture agreement, Kennecott can earn a 62.5% interest in the property by funding all costs on discoveries up to and including a production decision.

The Anuri East kimberlite lies immediately east of the highly diamondiferous Anuri kimberlite that was discovered in July 2001. Caustic fusion analysis of Anuri East drill core performed at Kennecott's diamond laboratory in Thunder Bay, Ontario returned the following preliminary results:

	Kimberlite Processed (kgs)	Total Diamonds Recovered (+0.15mm)	Diamonds Recovered (+0.5mm 1 dimension)	Diamonds Recovered (+0.5mm square mesh)	Diamonds Recovered (+1mm square mesh)
Previously reported Anuri Kimberlite results:					
Reported Aug. 27, 2001	656	937	337	61	9 (one ¾ carat diamond)
Anuri East Kimberlite					
Previously Reported Nov. 1, 2001	78	68	18	2	1
New Results Dec. 11, 2001	120.6	102	30	5	1
Combined Results	198.6	170	48	7	2

A major land acquisition program was completed following the discovery of the Anuri kimberlites, and the joint venture now controls in excess of 150,000 hectares (370,000 acres) in the region.

An aggressive exploration program is scheduled to commence in February 2002 on the Rockinghorse Property. The primary goal of the program will be to increase the kimberlite resource in the area, and continue to evaluate the economic potential of the existing Anuri kimberlite bodies. Approximately 25 kimberlite targets will be tested during the program.
