Re: Notice of Part 4 Screening for AREVA Resources Canada's "Kiggavik" project proposal

Dear Ms. Payette,

We have reviewed the project summary sent to us by NIRB and looked at the proposal drafted by AREVA. A project of this scale may have significant impact on the environment and the caribou as the proposed mining activities intersect with caribou and other wildlife habitats that are very important to the Athabasca Denesuline.

Athabasca Denesuline territory parallels the range of the caribou herds that our people have relied upon for more than 8,000 years; including northern Saskatchewan, the Northwest Territories, and Nunavut. Hunting, trapping, fishing and other land-based and cultural activities are based around the caribou.

Since the yearly migration of the Beverly-Qamanirjuaq caribou herd is integral to Athabasca Denesuline economic, social and cultural identity, any potential disturbance to the caribou is potential risk to the Athabasca Denesuline identity. For this reason, we are submitting comments in the attached comment form, along with a map depicting caribou activity around the proposed project site.

Sincerely

Ron Robillard

ADNI Chief Negotiator, Prince Albert Grand Council

## COMMENT FORM FOR NIRB SCREENINGS

The Nunavut Impact Review Board (NIRB) has a mandate to protect the integrity of the ecosystem for the existing and future residents of Nunavut. To assess the environmental and socio-economic impacts of the project proposal, NIRB would like to hear your concerns, comments and suggestions about the following project proposal application:

Project Proposal Title: Kiggavik Project				
Proponent: AREVA Resources Canada Inc.				
Location: Kivalliq Region				
Comments Due By: February 10, 2009	NIRB#: 09MN003			
Indicate your concerns about the project	t proposal below:			
□ no concerns	X traditional uses of land			
☐ water quality	☐ Inuit harvesting activities			
□ terrain ·	☐ community involvement and consultation			
□ air quality	□ local development in the area			
X wildlife and their habitat	☐ tourism in the area			
☐ marine mammals and their habitat	□ human health issues			
□ birds and their habitat	□ other:			
☐ fish and their habitat				
X heritage resources in area				
Please describe the concerns indicated a	bove:			
Since the yearly migration of the Beverly-Qamanirjuaq caribou herd is integral to Athabasca Denesuline economic, social and cultural identity, any potential disturbance to the caribou is potential risk to the Athabasca Denesuline identity. This specific area is integral habitat for the calving and migration of caribou that we depend on. Caribou are especially sensitive to disturbance at water crossings, many of which are in the vicinity of the proposed mine. As shown on our map and stated in AREVA's proposal, Beverley calving grounds are NW and SE of the proposed site, and post-calving grounds are in and around the project area. The winter and spring ranges are also in that area. Due to the size and nature of this project, we are concerned that mitigation measures may not be sufficient enough to minimize negative effects on caribou. There are also archaeological sites in the area and all activities should be conducted so that there is little or no impact on these.  Do you have any suggestions or recommendations for this application?				
More up-to-date studies of the Beverley and Qamanirjuaq herds are necessary before this project can begin. Without these, it will be difficult to make an accurate cumulative effect assessment. As well, we do not feel that the initial mitigation measures presented by AREVA are not strong enough.				
Do you support the project proposal? Yes \( \Bar{\subset} \) No X Any additional comments?				
At this time, the project proposal provides insufficient information about how our concerns about caribou, heritage resources and Athabasca Denesuline livelihoods would be addressed.  Name of person commenting: Ron Robillard of ADNT
