TO CONDUCT THE FOLLOWING STUDY:

Hydrological Baseline Assessment of the Kiggavik Project

SUMMARY OF RESEARCH:

The Kiggavik Sissons Project is a uranium surface exploration project located approximately 80 km west of Baker Lake. The project is made of two large groups of mining leases and mineral claims subdivided into Kiggavik to the north and Sissons to the south. The Kiggavik camp was first established in 1977 and it was occupied for drill programs until 1997. Exploration drilling has not taken place at the project since the end of the 1997 field season. The focus of the hydrological assessment is gather baseline streamflow and lake water level information from drainage areas in the Kiggavik-Sissons area.

THE STUDY WILL BE CONDUCTED AT: Baker Lake

BETWEEN: June 01, 2010 - October 01, 2010

Mosha Cote
