Hello Frazer,

The NWB, ECCC and CIRNA have reviewed the response to the comments provided during the 2021-2023 annual reports review. The review letter from CIRNA and ECCC are attached to this email for your information.

The NWB has the following request concerning comment number 3:

- The NWB requests that the Licensee assess the results of water quality monitoring for 2024 to identify parameter exceedance tendencies in the receiving environment, evaluate and report the possible reasons for these exceedances and provide measures to mitigate future exceedances.

The above information along with the response to ECCC's comments should be included in the 2024 annual report to be submitted by March 31, 2025.

Thank you!

Regards,
Nidhi Singh
Technical Advisor
Nunavut Water Board
