KIVALLIQ INUIT ASSOCIATION

Interested Party:	Kivalliq Inuit Association (KIA)	Rec No.:	KIA#1
Re:	Location of the proposed piping for filling tanks and fuel distribution		

KIA's comment:

There is a discrepancy on the location of the "proposed piping for filling tanks and fuel distribution" between Figure 2.2 (page 5 of the Environmental Performance Monitoring Plan) and engineering drawing 61-740-210-201 (Appendix B of the Design Report and Drawings).

The Kivla requests that AEM confirm which location of the "proposed piping for filling tanks and fuel distribution" is correct.

Agnico Eagle's Response:

Agnico Eagle would like to thank the KIA for their comment. The correct location of the "proposed piping for filling tanks and fuel distribution" is the one presented on engineering drawing 61-740-210-201 (Appendix B of the Design Report and Drawings).

Agnico Eagle will submit to the Board for review, within 90 days of completion of the facility, a revised version of the "Baker Lake Bulk Fuel Storage Facility: Environmental Performance Monitoring Plan". As-built details will be provided in this revised version of the plan.

Re:	Conditions Applying to Waste Disposal and Management		

KIA's comment:

In section 4 (page 8) of the Environmental Performance Monitoring Plan the guidelines being used for determining the effluent quality limits are the Metal Mines Effluent Regulations (MMER). The MMER were amended in 2017 and are now referred to as the Metal and Diamond Mines Effluent Regulations (MDMER). These updated regulations have reduced the maximum allowed concentration for several elements, in particular, arsenic, copper, nickel, zinc and lead. The new MDMER come into force between June 1, 2018 and June 1, 2021.

The Kivla requests that AEM confirm when the Baker Lake Tank Farm Environmental Performance Monitoring Plan will be updated with the MDMER.

Agnico Eagle's Response:

Agnico Eagle would like to thank the KIA for their comment. Revised MDMER maximum allowed concentrations will come into force on June 1, 2021. A revised version of the "Baker Lake Bulk Fuel Storage Facility: Environmental Performance Monitoring Plan" and including updated section 4 (page 8) will be provided at that time.
