SpectrAlert Advance DECALS are for use on our non-pad printed wall- and ceiling-mount devices. Each decal comes with AGENT, EVAC, ALERT, or FIRE label options. The **Sync•Circuit Module** synchronizes SpectrAlert Advance strobes at 1 Hz and horns and chimes at temporal 3 over a single pair of wires. Patented module technology also allows the silencing of horns or chimes on horn strobe and chime strobe models over a pair of wires. See Datasheet *A05-1007-005* for more information.

Specifications

MP120K

120 VAC mounting plate model MP120K shall be listed to UL 464 for fire protective signaling systems. The mounting plate shall power a two-wire SpectrAlert® Advance horn, strobe, horn strobe, chime or chime strobe from a 120 VAC supply converted to nominal 24 V FWR. For indoor applications, the mounting plate shall be installed in a 4x4x2 1/8 -inch junction box. For outdoor applications, the mounting plate shall be installed using the proper SpectrAlert Advance outdoor weatherproof back box and outdoor listed notification appliance.

Compatibility

MP120K may be used with any of the following products at all horn and strobe settings: P2R, P2RH, P2RK, P2RHK, P2W, P2WH, SR, SRH, SRK, SRHK, SW, SWH, PC2R, PC2RH, PC2RK, PC2RHK, PC2W, PC2WH, SCR, SCRH, SCRK, SCRHK, SCW, SCWH, HR, HRK, HW, SR-P, SW-P, SRH-P, SWH-P, P2R-P, P2W-P, P2RH-P, P2WH-P, SCR-P, SCW-P, SCRH-P, SCWH-P, PC2R-P, PC2W-P, PC2RH-P, PC2WH-P, SR-SP, SRH-SP, P2R-SP, P2RH-SP, SCW-SP, SCWH-SP, PC2W-SP, PC2WH-SP, CHR, CHW, CHSR, CHSW.

Physical/Operating Specifications

Standard Operating Temperature	–40°F to 151°F (–40°C to 66°C)
Humidity Range	10 to 93% non-condensing (indoor products)
Nominal Voltage	Regulated 120 VAC
Operating Voltage Range	96–132 VAC
Current Draw From AC Line	150 mA max.

WTP Weatherproof Plates

The SpectrAlert Advance weatherproof plate for horns, strobes, and horn strobes shall mount to 4x4x1 1/4-inch and 2x4x1 1/2-inch back boxes. The weatherproof plate for speakers and speaker strobes shall mount to 4x4x2 1/8-inch back boxes. The weatherproof plate may be installed on brick, concrete, ceramic tile, and masonry brick and must be used with System Sensor "K" series outdoor replacement models (-R). Outdoor SpectrAlert Advance products shall operate between -40°F and 151°F.

Physical Specifications

Speaker Strobe	7.25" L x 6.26" W x 3.00" D (including speaker and lens)
Speaker	7.25" L x 6.26" W x 1.30" D (including speaker)
Horn Strobe	6.90" L x 5.90" W x 2.80" D (including strobe lens)
Horn	6.90" L x 5.90" W x 1.60" D (including horn)

Note: WTP and WTPW are compatible with 4x4x11/4-inch and 2x4x11/2-inch back boxes. (Compatible with outdoor horns, horn strobes and strobes)
WTP-SP and WTP-SPW are compatible with 4x4x21/8-inch back boxes. (Compatible with outdoor speakers and speaker strobes)

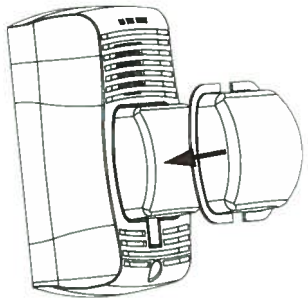
Models Available for Use with the Watertight Plates:

WTP/WTPW	HRK-R
WTP/WTPW	SRK-R, SRHK-R, SWK-R, SWHK-R
WTP/WTPW	P2RK-R, P2RHK-R, P4RK-R, P2WK-R, P2WHK-R
WTP-SP	SPRK-R, SPWK-R
WTP-SPW	SPSRK-R

Note: -R models ship without the outdoor back box. The weatherproof mounting plates are designed to be used only with -R replacement models.

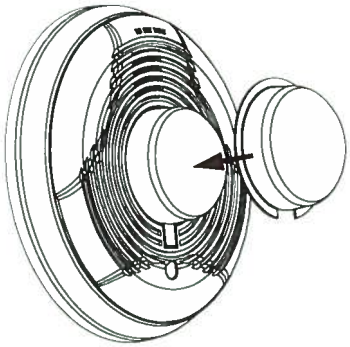
Specifications

Color Lens Attachments



The System Sensor SpectrAlert Advance color lens attachments shall be approved for fire protective service as listed in UL 1638. The lens attachments shall only be used with non-FIRE-printed System Sensor strobe devices. The lens shall mount to any wall- or ceiling-mount strobes and shall be rated from –35°F to 151°F.

Compatibility



Color lens attachments may be used with the following System Sensor plain (non-FIRE-printed) indoor or outdoor strobe models: SR-P, SRH-P, SW-P, SWH-P, P2R-P, P2W-P, P2WH-P, P2RK-P, P2RHK-P, SCW-P, PC2R-P, PC2W-P, PC2WH-P, SPSW-P, SPSR-P, SPSWH-P, SPSRH-P, SPSWV-P, SPSRV-P, SPSCW-P, SPSCWH-P, SPSCWV-P, SPSCWVH-P, SRK-P, SRHK-P, SWK-P, SWHK-P, P2WK-P, P2WHK-P, SPSWK-P, SPSRK-P, SW-CLR-ALERT, SCW-CLR-ALERT, SPSCW-CLRALERT.

Color Lens Installation

Installation to Wall-Mount Strobe

Installation to Ceiling-Mount Strobe

Candela Rating for UL 1638

Light output of color lenses is measured per UL 1638, on axis, and is not derated.

EOL-CR, EOL-CW

Universal End-of-Line Device Mounting Plates

NOTIFIER® by Honeywell

General

The EOL-CR and EOL-CW Universal End-of-Line Device Mounting Plates are used, when required, to place the end-of-line device at an accessible height. The EOL-CR/-CW consists of a terminal strip mounted on a heavy gauge metallic single-gang faceplate, finished in red or white baked enamel; it fits on a standard single-gang electrical box. The end-of-line device is included with the corresponding module in the central equipment.

Architectural/Engineering Specifications

The End-of-Line Device Mounting Plate shall be model EOL-CR/-CW. It shall consist of a terminal strip, mounted on a single-gang faceplate, made of heavy-gauge metal, finished in red (EOL-CR) or white (EOL-CW), and shall fit on a standard single-gang electrical box.

Agency Listings and Approvals

The listings and approvals below apply to the EOL-CR and EOL-CW Mounting Plates for End-of-Line Devices. In some cases, certain modules or applications may not be listed by certain approval agencies, or listing may be in progress. Consult factory for latest listing status.

- **ULC Listed:** File S7547

Ordering Information

EOL-CR: End-of-line device mounting plate (red). Shipping weight 0.17 kg (6 oz.).

EOL-CW: End-of-line device mounting plate (white). Shipping weight 0.17 kg (6 oz.).

FMM-1(A), FMM-101(A), FZM-1(A) & FDM-1(A)

Monitor Modules with FlashScan®

NOTIFIER® by Honeywell

Intelligent/Addressable Devices

General

Four different monitor modules are available for Notifier's intelligent control panels for a variety of applications. Monitor modules supervise a circuit of dry-contact input devices, such as conventional heat detectors and pull stations, or monitor and power a circuit of two-wire smoke detectors (FZM-1(A)).

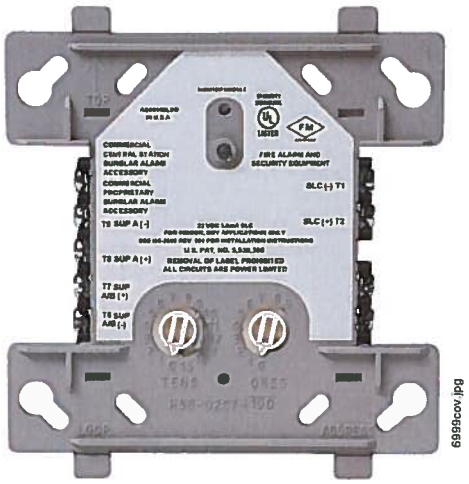
FMM-1(A) is a standard-sized module (typically mounts to a 4" [10.16 cm] square box) that supervises either a Style D (Class A) or Style B (Class B) circuit of dry-contact input devices.

FMM-101(A) is a miniature monitor module a mere 1.3" (3.302 cm) H x 2.75" (6.985 cm) W x 0.5" (1.270 cm) D that supervises a Style B (Class B) circuit of dry-contact input devices. Its compact design allows the FMM-101(A) to be mounted in a single-gang box behind the device it monitors.

FZM-1(A) is a standard-sized module that monitors and supervises compatible two-wire, 24 volt, smoke detectors on a Style D (Class A) or Style B (Class B) circuit.

FDM-1(A) is a standard-sized dual monitor module that monitors and supervises two independent two-wire Style B (Class B) dry-contact initiating device circuits (IDCs) at two separate, consecutive addresses in intelligent, two-wire systems.

FlashScan® (U.S. Patent 5,539,389) is a communication protocol developed by NOTIFIER that greatly increases the speed of communication between analog intelligent devices. Intelligent devices communicate in a grouped fashion. If one of the devices within the group has new information, the panel CPU stops the group poll and concentrates on single points. The net effect is response speed greater than five times that of other designs.



FMM-1(A) Monitor Module

- Built-in type identification automatically identifies this device as a monitor module to the control panel.
- Powered directly by two-wire SLC loop. No additional power required.
- High noise (EMF/RFI) immunity.
- SEMS screws with clamping plates for ease of wiring.
- Direct-dial entry of address: 01 – 159 on FlashScan loops; 01 – 99 on CLIP loops.
- LED flashes green during normal operation (this is a programmable option) and latches on steady red to indicate alarm.

The FMM-1(A) Monitor Module is intended for use in intelligent, two-wire systems, where the individual address of each module is selected using the built-in rotary switches. It provides either a two-wire or four-wire fault-tolerant Initiating Device Circuit (IDC) for normally-open-contact fire alarm and supervisory devices. The module has a panel-controlled LED indicator. The FMM-1(A) can be used to replace MMX-1(A) modules in existing systems.

FMM-1(A) APPLICATIONS

Use to monitor a zone of four-wire smoke detectors, manual fire alarm pull stations, waterflow devices, or other normally-open dry-contact alarm activation devices. May also be used to monitor normally-open supervisory devices with special supervisory indication at the control panel. Monitored circuit may be wired as an NFPA Style B (Class B) or Style D (Class A) Initiating Device Circuit. A 47K ohm End-of-Line Resistor (provided) terminates the Style B circuit. No resistor is required for supervision of the Style D circuit.

FMM-1(A) (Type H)

FMM-1(A) OPERATION

Each FMM-1(A) uses one of the available module addresses on an SLC loop. It responds to regular polls from the control panel and reports its type and the status (open/normal/short) of its Initiating Device Circuit (IDC). A flashing LED indicates that the module is in communication with the control panel. The LED latches steady on alarm (subject to current limitations on the loop).

FMM-1(A) SPECIFICATIONS

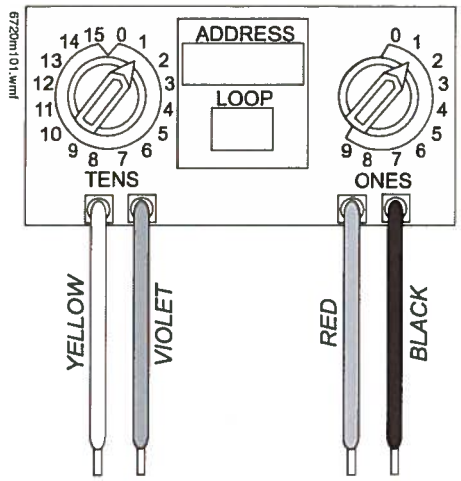
Nominal operating voltage: 15 to 32 VDC.

Maximum current draw: 5.0 mA (LED on).

Average operating current: 350 µA (LED flashing), 1 communication every 5 seconds, 47k EOL.

Maximum IDC wiring resistance: 40 ohms.

EOL resistance: 47K ohms.



Temperature range: 32°F to 120°F (0°C to 49°C).

Humidity range: 10% to 93% noncondensing.

Dimensions: 4.5" (11.43 cm) high x 4" (10.16 cm) wide x 1.25" (3.175 cm) deep. Mounts to a 4" (10.16 cm) square x 2.125" (5.398 cm) deep box.

FMM-101(A) Mini Monitor Module

- Built-in type identification automatically identifies this device as a monitor module to the panel.
- Powered directly by two-wire SLC loop. No additional power required.
- High noise (EMF/RFI) immunity.
- Tinned, stripped leads for ease of wiring.
- Direct-dial entry of address: 01 – 159 on FlashScan loops; 01 – 99 on CLIP loops.

The FMM-101(A) Mini Monitor Module can be installed in a single-gang junction directly behind the monitored unit. Its small size and light weight allow it to be installed without rigid mounting. The FMM-101(A) is intended for use in intelligent, two-wire systems where the individual address of each module is selected using rotary switches. It provides a two-wire initiating device circuit for normally-open-contact fire alarm and security devices. The FMM-101(A) can be used to replace MMX-101(A) modules in existing systems.

FMM-101(A) APPLICATIONS

Use to monitor a single device or a zone of four-wire smoke detectors, manual fire alarm pull stations, waterflow devices, or other normally-open dry-contact devices. May also be used to monitor normally-open supervisory devices with special supervisory indication at the control panel. Monitored circuit/device is wired as an NFPA Style B (Class B) Initiating Device Circuit. A 47K ohm End-of-Line Resistor (provided) terminates the circuit.

FMM-101(A) OPERATION

Each FMM-101(A) uses one of the available module addresses on an SLC loop. It responds to regular polls from the control panel and reports its type and the status (open/normal/short) of its Initiating Device Circuit (IDC).

FMM-101(A) SPECIFICATIONS

Nominal operating voltage: 15 to 32 VDC.

Average operating current: 350 µA, 1 communication every 5 seconds, 47k EOL; 600 µA Max. (Communicating, IDC Shorted).

Maximum IDC wiring resistance: 40 ohms.

Maximum IDC Voltage: 11 Volts.

Maximum IDC Current: 400 µA.

EOL resistance: 47K ohms.

Temperature range: 32°F to 120°F (0°C to 49°C).

Humidity range: 10% to 93% noncondensing.

Dimensions: 1.3" (3.302 cm) high x 2.75" (6.985 cm) wide x 0.65" (1.651 cm) deep.

Wire length: 6" (15.24 cm) minimum.

FZM-1(A) Interface Module

- Supports compatible two-wire smoke detectors.
- Supervises IDC wiring and connection of external power source.
- High noise (EMF/RFI) immunity.
- SEMS screws with clamping plates for ease of wiring.
- Direct-dial entry of address: 01 – 159 on FlashScan loops, 01 – 99 on CLIP loops.
- LED flashes during normal operation; this is a programmable option.
- LED latches steady to indicate alarm on command from control panel.

The FZM-1(A) Interface Module is intended for use in intelligent, addressable systems, where the individual address of each module is selected using built-in rotary switches. This module allows intelligent panels to interface and monitor two-wire conventional smoke detectors. It transmits the status (normal, open, or alarm) of one full zone of conventional detectors back to the control panel. All two-wire detectors being monitored must be UL compatible with the module. The FZM-1(A) can be used to replace MMX-2(A) modules in existing systems.

FZM-1(A) APPLICATIONS

Use the FZM-1(A) to monitor a zone of two-wire smoke detectors. The monitored circuit may be wired as an NFPA Style B (Class B) or Style D (Class A) Initiating Device Circuit. A 3.9 K ohm End-of-Line Resistor (provided) terminates the end of the Style B or D (class B or A) circuit (maximum IDC loop resistance is 25 ohms). Install ELR across terminals 8 and 9 for Style D application.

FZM-1(A) OPERATION

Each FZM-1(A) uses one of the available module addresses on an SLC loop. It responds to regular polls from the control panel and reports its type and the status (open/normal/short) of its Initiating Device Circuit (IDC). A flashing LED indicates that the module is in communication with the control panel. The LED latches steady on alarm (subject to current limitations on the loop).

FZM-1(A) SPECIFICATIONS

Nominal operating voltage: 15 to 32 VDC.

Maximum current draw: 5.1 mA (LED on).

Maximum IDC wiring resistance: 25 ohms.

Average operating current: 300 µA, 1 communication and 1 LED flash every 5 seconds, 3.9k eol.

EOL resistance: 3.9K ohms.

External supply voltage (between Terminals T3 and T4): DC voltage: 24 volts power limited. Ripple voltage: 0.1 Vrms maximum. Current: 90 mA per module maximum.

Temperature range: 32°F to 120°F (0°C to 49°C).

Humidity range: 10% to 93% noncondensing.

Dimensions: 4.5" (11.43 cm) high x 4" (10.16 cm) wide x 1.25" (3.175 cm) deep. Mounts to a 4" (10.16 cm) square x 2.125" (5.398 cm) deep box.

FDM1(A) Dual Monitor Module

The FDM-1(A) Dual Monitor Module is intended for use in intelligent, two-wire systems. It provides two independent two-wire initiating device circuits (IDCs) at two separate, consecutive addresses. It is capable of monitoring normally open contact fire alarm and supervisory devices; or either normally open or normally closed security devices. The module has a single panel-controlled LED.

***NOTE:** The FDM-1(A) provides two Style B (Class B) IDC circuits ONLY. Style D (Class A) IDC circuits are NOT supported in any application.*

FDM-1(A) SPECIFICATIONS

Normal operating voltage range: 15 to 32 VDC.

Maximum current draw: 6.4 mA (LED on).

Average operating current: 750 µA (LED flashing).

Maximum IDC wiring resistance: 1,500 ohms.

Maximum IDC Voltage: 11 Volts.

Maximum IDC Current: 240 µA

EOL resistance: 47K ohms.

Maximum SLC Wiring resistance: 40 Ohms.

Temperature range: 32° to 120°F (0° to 49°C).

Humidity range: 10% to 93% (non-condensing).

Dimensions: 4.5" (11.43 cm) high x 4" (10.16 cm) wide x 2.125" (5.398 cm) deep.

FDM-1(A) AUTOMATIC ADDRESSING

The FDM-1(A) automatically assigns itself to two addressable points, starting with the original address. For example, if the FDM-1(A) is set to address "26", then it will automatically assign itself to addresses "26" and "27".

***NOTE:** "Ones" addresses on the FDM-1(A) are 0, 2, 4, 6, or 8 only. Terminals 6 and 7 use the first address, and terminals 8 and 9 use the second address.*

CAUTION:
Avoid duplicating addresses on the system.

Installation

FMM-1(A), FZM-1(A), and FDM-1(A) modules mount directly to a standard 4" (10.16 cm) square, 2.125" (5.398 cm) deep, electrical box. They may also be mounted to the SMB500 surface-mount box. Mounting hardware and installation instructions are provided with each module. All wiring must conform to applicable local codes, ordinances, and regulations. These modules are intended for power-limited wiring only.

The FMM-101(A) module is intended to be wired and mounted without rigid connections inside a standard electrical box. All wiring must conform to applicable local codes, ordinances, and regulations.

Agency Listings and Approvals

In some cases, certain modules may not be listed by certain approval agencies, or listing may be in process. Consult factory for latest listing status.

NBG-12 Series

Non-Coded Conventional Manual Fire Alarm Pull Stations

NOTIFIER® by Honeywell

Conventional Initiating Devices

General

The NOTIFIER **NBG-12 Series** is a cost-effective, feature-packed series of non-coded manual fire alarm pull stations. It was designed to meet multiple applications with the installer and end-user in mind. The NBG-12 Series features a variety of models including single- and dual-action versions.

The NBG-12 Series provides an alarm initiating input signal to conventional fire alarm control panels (FACPs) such as the SFP Series, and to XP Transponders. Its innovative design, durable construction, and multiple mounting options make the NBG-12 Series simple to install, maintain, and operate.

Features

- Aesthetically pleasing, highly visible design and color.
- Attractive contoured shape and light textured finish.
- Meets ADA 5 lb. maximum pull-force.
- Meets UL 38, Standard for Manually Actuated Signaling Boxes.
- Easily operated (single- or dual-action, model dependent), yet designed to prevent false alarms when bumped, shaken, or jarred.
- PUSH IN/PULL DOWN handle latches in the down position to clearly indicate the station has been operated.
- The word "ACTIVATED" appears on top of the handle in bright yellow, further indicating operation of the station.
- Operation handle features white arrows showing basic operation direction for non-English-speaking persons.
- Braille text included on finger-hold area of operation handle and across top of handle.
- Multiple hex- and key-lock models available.
- U.S. patented hex-lock needs only a quarter-turn to lock/unlock.
- Station can be opened for inspection and maintenance without initiating an alarm.
- Product ID label viewable by simply opening the cover; label is made of a durable long-life material.
- The words "NORMAL" and "ACTIVATED" are molded into the plastic adjacent to the alarm switch (located inside).
- Four-position terminal strip molded into backplate.
- Terminal strip includes Phillips combination-head captive 8/32 screws for easy connection to Initiating Device Circuit (IDC).
- Terminal screws backed-out at factory and shipped ready to accept field wiring (up to 12 AWG/3.1 mm²).
- Terminal numbers are molded into the backplate, eliminating the need for labels.
- Switch contacts are normally open.
- Can be surface-mounted (with **SB-10** or **SB-I/O**) or semi-flush mounted. Semi-flush mount to a standard single-gang, double-gang, or 4" (10.16 cm) square electrical box.
- Backplate is large enough to overlap a single-gang backbox cutout by 1/2" (1.27 cm).
- Optional trim ring (**BG12TR**).
- Spanish versions *(FUEGO)* available (**NBG-12LSP, NBG-12LPSP**).
- Designed to replace the legacy **NBG-10** Series.
- Models packaged in attractive, clear plastic (PVC), clam-shell-style, Point-of-Purchase packages. Packaging includes a cutaway dust/paint cover in shape of pull station.

6643cov.jpg

Construction

- Cover, backplate and operation handle are all molded of durable polycarbonate material.
- Cover features white lettering and trim.
- Red color matches System Sensor's popular SpectrAlert® Advance horn/strobe series.

Operation

The NBG-12 manual pull stations provide a textured finger-hold area that includes Braille text. In addition to PUSH IN and PULL DOWN text, there are arrows indicating how to operate the station, provided for non-English-speaking people.

Pushing in and then pulling down on the handle activates the normally-open alarm switch. Once latched in the down position, the word "ACTIVATED" appears at the top in bright yellow, with a portion of the handle protruding at the bottom as a visible flag. Resetting the station is simple: insert the key or hex (model dependent), twist one quarter-turn, then open the station's front cover, causing the spring-loaded operation handle to return to its original position. The alarm switch can then be reset to its normal (non-alarm) position manually (by hand) or by closing the station's front cover, which automatically resets the switch.

ELECTRICAL SPECIFICATIONS:

Switch contact ratings: gold-plated; rating 0.25 A @ 30 VAC or VDC. **Auxiliary contact circuit** (Terminals 3 & 4, NBG-12LA): rated to 3.0 A @ 30 VAC or VDC.

ENGINEERING/ARCHITECTURAL SPECIFICATIONS

Manual Fire Alarm Stations shall be non-code, with a key- or hex-operated reset lock in order that they may be tested, and so designed that after actual Emergency Operation, they cannot be restored to normal except by use of a key or hex. An operated station shall automatically condition itself so as to be visually detected as activated. Manual stations shall be constructed of red colored LEXAN (or polycarbonate equivalent) with clearly visible operating instructions provided on the cover. The word **FIRE** shall appear on the front of the stations in white letters, 1.00 inches (2.54 cm) or larger.* Stations shall be suitable for surface mounting on matching backbox SB-10 or SB-I/O; or semi-flush mounting on a standard single-gang, double-gang, or 4" (10.16 cm) square electrical box, and shall be installed within the limits defined by the Americans with Disabilities Act (ADA) or per national/local requirements. Manual Stations shall be Underwriters Laboratories listed.

***NOTE:** *The words "FIRE/FUEGO" on the NBG-12LSP and NBG-12LPSP shall appear on the front of the station in white letters, approximately 3/4" (1.905 cm) high.*

Pre-Signal Models

The **NBG-12LPS** and **NBG-12LPSP** pull stations are non-coded manual pull stations which provide a FACP with two normally open alarm initiating input signals. "Pre-signal" input is activated by pushing in, then pulling down, the dual-action handle. A "general" alarm input signal can be manually activated via a momentary rocker switch mounted inside the unit. This general alarm switch can only be accessed by opening the cover with the supplied key/lock. *See diagram at right.*

Agency Listings and Approvals

The listings and approvals below apply to the NBG-12 Series pull stations. In some cases, certain modules may not be listed by certain approval agencies, or listing may be in process. Consult factory for latest listing status.

- **C(UL)US** Listed: file S692.
- **CSFM** approved: file 7150-0028:199.
- **FM** approved *(except NBG-12LPS, NBG-12LPSP).*
- **MEA** approved: file 67-02-E *(NBG-12, NBG-12L, NBG-12LOB, NBG-12LA).*
- **Lloyd's Register** type approved: file 93/60141 (E3) *(NBG-12, NBG-12L, NBG-12LA, NBG-12LOB, NBG-12S).*
- **U.S. Coast Guard** approved: files 161.002/23/3 *(AFP-200 with NBG-12, NBG-12L, NBG-12S)*; 161.002/42/1 *(NFS-640 with NBG-12, NBG-12L, NBG-12S)*; 161.002/27/3 *(AFP1010/AM2020 with NBG-12, NBG-12L, NBG-12S).*
- **Patented:** U.S. Patent No. D428,351; 6,380,846; 6,314,772; 6,632,108.

Product Line Information

NBG-12S: Single-action pull station with pigtail connections, hex lock.

NBG-12: Dual-action pull station with SPST N/O switch, screw terminal connections, ***hex lock.***

NBG-12L: Dual-action pull station with SPST N/O switch, screw terminal connections, ***key lock.***

NBG-12LSP: Same as NBG-12L with English/Spanish *(FIRE/FUEGO)* labeling.

NBG-12LPS: Dual-action pull station with pre-signal option.

NBG-12LPSP: Same as NBG-12LPS with English/Spanish *(FIRE/FUEGO)* labeling.

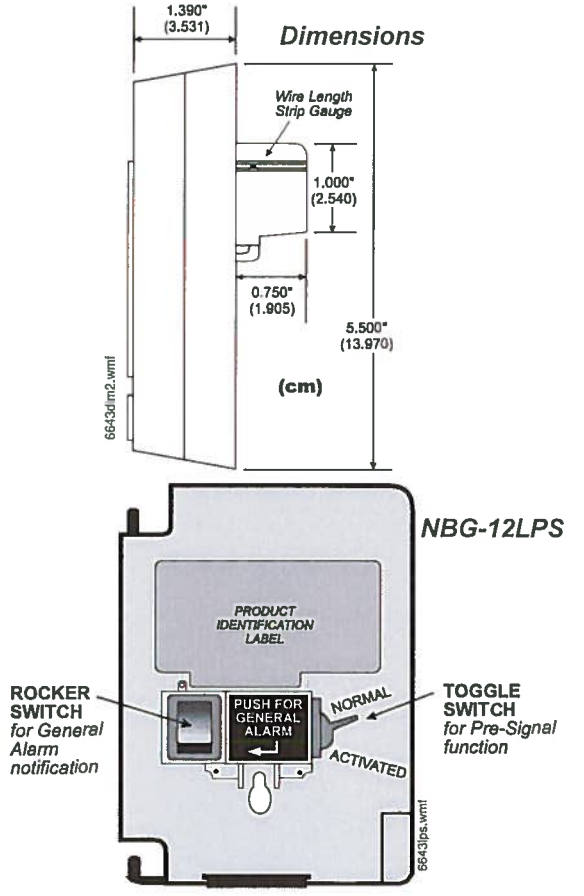
NBG-12LOB: Dual-action pull station with key lock, outdoor applications listings (**NBG-12LO**), and backbox. Includes **SB-I/O** indoor/outdoor backbox, and sealing gasket. Model will also mount to **WP-10** weatherproof backbox in retrofit applications.

***NOTE:** NBG-12LO not available separately;*
NBG-12LO + approved backbox = NBG-12LOB.
Outdoor applications listings apply to NBG-12LOB combination.

NBG-12LA: Dual-action pull station with key lock and annunciator contacts.

SB-10: Surface-mount backbox, metal.

SB-I/O: Surface-mount backbox, plastic. *(Included with NBG-12LOB.)*



BG12TR: Optional trim ring for semi-flush mounting.

WP-10: Outdoor use backbox.

17021: Keys, set of two. (Included with key-lock pull stations.)

17007: Hex key, 9/64". (Included with hex-lock pull stations.)

***NOTE:** For addressable NBG-12LX models, see data sheet DN-6726.*

polycarbonate products

STI Universal Stopper®

Shown with waterproof back box

Indoor/Outdoor

c UL us
ADA Compliant
See Reverse For Details

PRODUCT OVERVIEW

These indoor/outdoor low profile or dome polycarbonate covers protect devices such as dual action pull stations, keypads for entry systems, intercom stations, emergency buttons, electrical light switches, duplex plugs, etc., without restricting legitimate operation. The versatile cover offers excellent protection against physical damage (both accidental and intentional), dust and grime as well as severe environments inside and out.

Cover options: Dome or Low Profile, with or without horn, flush mount, surface mount or waterproof back box models. Maximum protrusion is 4 inches deep. Cover has the same footprint as the Mini Stopper® but accommodates most dual action pull stations.

FEATURES

- Protects against vandalism, accidental damage, dust and grime and severe environments inside and outside.
- Protects pull stations, keypads, intercom stations, emergency buttons, electrical light switches or duplex plugs.
- Cover is molded from thick, tough polycarbonate material.
- Cover available in low profile or dome shape.
- Flush frame, surface frame or waterproof back box (with sealed or open internal mounting plate), enclosed flush back box.
- Top and bottom of waterproof back box are threaded for 3/4" NPT rigid conduit.
- Sized to fit most pull stations.
- High strength continuous hinge.
- Dome models have optional relay output with 12-24 VDC power input.
- Gaskets included.
- ADA Compliant.
- Locking tab (not for use with fire pull stations).
- Dome models available with or without 105 dB horn.
- Dome models available with red, green, blue, yellow, white or black label hood/horn housing with custom or no label.
- Available for red units "In Case of Fire..." label.
- UV-stabilized to keep cover clear.
- Typical working properties of polycarbonate are -40° to 250°F (-40° to 121°C).
- No charge for custom label. (See reverse for details.)
- Three year guarantee against breakage of polycarbonate in normal use (one year on electro mechanical and electronic components).

WARRANTY

Three year guarantee against breakage of polycarbonate in normal use (one year on electro mechanical and electronic components).

IMPORTANT NOTICE

When used on fire systems, Universal Stopper is intended for areas where the incidence of false fire alarms from manual pull stations is high or has proven to be a serious problem. Any disadvantage of the device is more than balanced when one considers the consequences of false fire alarms, especially if fire service personnel and equipment are responding to a false fire alarm when they are needed for a real fire somewhere else. Add to this the disruption to the facility when false alarms occur. If you have, or may have, a problem with false fire alarms or physical/weather damage to your fire alarm activation devices, the Universal Stopper could prove invaluable.

Fire Detection Devices
CR/CF-MP Series
Moisture-Proof Heat Detectors

Features

- Dual Action Rate of Rise & Fixed Temperature
- Detects Rate of Ambient temperature rise of 8°C (15°F)
- Detectors operating on fixed temperatures are only available in two settings of 135°F (57°C) or 200°F (93°C)
- Clear-anodized aluminium finish

Description

The CR and CF-MP Series Moisture Proof Detectors are designed for hazardous locations and Moisture Proof applications. Each Moisture Proof detector is available in single or multiple circuits with open and/or closed contact configurations, and any of the fixed temperature settings including 135, 165, 200 and 285 degrees Farenheit.

The Moisture Proof detector is characterized by a black phenol-plastic seal plate and black and white pigtail connections. It is specified for use in high humidity environments and areas that are subject to corrosive elements or spray washing. The suffix "MP" denotes "Moisture Proof".

CR-135MP

The Model CR-135MP is a combination Rate-of-Rise and Fixed Temperature detector. A set of normally open contacts will close when the ceiling temperature increases at a (minimum) rate of 8.4°C (15°F) per minute. Closing the contacts initiates the fire alarm sequence. Independent of the rate-of-rise operation, the fixed temperature portion consists of a spring-loaded plunger retained by a fusible alloy that releases when the ceiling temperature reaches 135°F (57°C). When released, the plunger strikes the contacts and holds them closed. Spacing on an uninterrupted ceiling is 70 ft. (21.3m) for the rate-of-rise; 40 ft. (12.2m) for the fixed temperature portion.

CF-135MP

The Model CF-135MP is a Fixed Temperature Only detector. The fixed temperature portion consists of a spring-loaded plunger retained by a fusible alloy that releases when the ceiling temperature reaches 135°F (57°C). When released, the plunger strikes a normally open set of contacts and holds them closed. Spacing on an uninterrupted ceiling is 40 ft. (21.3m). The CF-135MP is identified by a black dot on its heat collector fin.

CR-200MP

The Model CR-200MP is a combination Rate-of-Rise and Fixed Temperature detector that operates in the same way as the CR-135MP, with the exception that the fixed temperature portion releases when the ceiling temperature reaches 200°F (93°C). Spacing on an uninterrupted ceiling is 70 ft. (21.3) for the rate-of-rise, and 25 ft.(7.6m) for the fixed temperature portion (a reduced spacing parameter from the CF-135MP). The CR-200MP is identified by a white dot on its heat collector fin.

CF-200MP

The Model CF-200MP is a Fixed Temperature Only detector. The fixed temperature portion releases when the ceiling temperature reaches 200°F (93°C). Spacing is 25 ft., (7.6m). The CF-200MP is identified by a black dot and a white dot on the heat collector fin.

Canada 25 Interchange Way, Vaughan (Toronto), Ontario L4K 5W3 Telephone: (905) 695-3549 Fax: (905) 660-4113 • **Web Page:** www.summit-st.net

Catalog Number 400 • Not to be used for installation purposes.

Contact Configurations

Any Detector in the Moisture Proof Series is available in Normally Open (by far the most common) or Normally Closed, or Multiple Circuit configurations. The Model Number does not reflect the Normally Open configuration, however the letter "C" denotes Normally Closed. For example: "CR 135 C MP" describes a rate-of-rise / fixed temperature detector, fusing at 135°F., with Normally Closed contacts, assembled with the moisture proof seal plate.

Engineering Specifications

The CR & CF Series Moisture Proof detectors shall be installed in areas where corrosive elements exist or washing of walls and ceiling surfaces is commonplace. The fixed temperature portion and the rate-of-rise operation shall be determined by the ambient temperature. The Moisture Proof detectors shall be installed in areas where environmental conditions including dust, vapours, insects, etc., would cause an ionization or photoelectric type detector to initiate a false alarm.

NOTES GENERALES / GENERAL NOTES

1. THE PUMPING STATION CONTAINER COMES PREWIRED WITH THOSE JONCTION BOXES. ELECTRICAL CONTRACTOR SHALL CONNECT THOSE JONCTION BOXES TO THE RIGHT SERVICES IN THE ELECTRICAL CONTAINER. ALL CABLES BETWEEN CONTAINERS SHALL BE TECK TYPE AND INSTALLED BURIED IN TRENCH. INSTALL 3X 100mm Ø CONDUITS FOR FUTURE CABLES.
2. THE RED TAPES SHALL BE INSTALLED ABOVE THE WOODEN PLANKS AND FOLLOW ALL THE BURIED PART OF THEM.
3. LIGHTING AND SERVICES CABLES FOR TANKS MUST BE INSTALLED USING PIPING RACKS. PIPING RACKS ARE SUPPLIED AND INSTALLED BY OTHER (SEE TYPICAL DETAIL ON DRAWING 65-416-285-200)

- THE LOCATION OF PIPING IS APPROXIMATE AND SHALL BE COORDINATE WITH OTHER CONTRACTORS

Vendor Document Status

1 ☐	Proceed to next submission and status.
2 ☐	Proceed with exceptions as noted to next submission and status.
3 ☐	Do not proceed. Revise as noted and resubmit next submission and status.
4 ☑	Complete, no further submission required.

By: Date:

Review and authorization to fabricate are only for general conformance with the design concept of the Project as expressed in the Contract Documents. Sole responsibility for the accuracy and completeness of this document, including but not limited to dimensions and quantities, remains with the Supplier/Contractor. Agnico Eagle does not warrant the accuracy or completeness of any of the information contained herein, nor does Agnico Eagle authorize or approve any construction means, methods, techniques, sequences or any safety precautions or procedures.

Agnico Eagle No. 6515-C-260-002-141-QCR-0003 R: Sub001

DOCUMENT FOR INFORMATION

Preamble:

This package contains all QA/QC documents and drawings for the field erected fuel storage tank. The Inspection and Test Plan (ITP) serves as a Table of Contents for the Handover Package. The contents have been divided into items 1-20, and a table of contents for each item of the ITP can be found at the beginning of each section (item). The As-Built Drawings can be found at the end of this package.

This package was compiled by the General Contractor: **Inukshuk Construction Ltd.** and reviewed by Mechanical Engineer: **Kyle Brown**.

DEFINITIONS:

W - WITNESS: Specified activity to be observed by an outlined party. QC to provide the applicable party 24 hours notice of witness point.

H - HOLD: Specified component or installation to be inspected by an outlined party. No further activities specific to the component or installation may proceed until inspection is carried out. QC to provide the applicable party 24 hours notice of hold point.

R - REVIEW: Specified documentation and specifications applicable to a particular component and/or installation to be examined by an outlined party.

AT - AIR TEST: Specified component and/or installation to be air tested according to specified documentation and specifications.

DC - DIMENSION CHECK: Physical dimensions of component and/or installation to be verified according to specified documentation and specifications.

FI - FINAL INSPECTION: Specified inspection procedures to be executed prior to release of the component and/or installation and verified according to specified documentation and specifications.

NDT - NON DESTRUCTIVE TESTING: Specified component and/or installation to be inspected using a named non destructive testing method according to specified documentation and specifications.

VE - VISUAL Examination: Specified component and/or installation to be examined visually according to specified documentation and specification.

VB - VACUUM-BOX TEST: Specified component and/or installation to be vacuum box tested according to specified documentation and specifications.

Item 4 - Inspector Qualifications - Pierre Dostie (NDE)

Inspecteur en Soudage Certifié

PIERRE DOSTIE **No. Enr# 3414**

est un Inspecteur en soudage certifié de **Niveau3** et satisfait aux exigences de la norme CSA W178.2 « Qualification des inspecteurs en soudage ».

Valide jusqu'au **février 16, 2018**

Cette certification est valide pour le(s) code(s) et/ou la norme(s) suivant(es) :

CSA W47.1/W59	**Valide jusqu'en août 2020**
ASME MII-1 IX	**Valide jusqu'en novembre 2021**
ASME B31.3	**Valide jusqu'en août 2020**
CSA W47.2/W59.2	**Valide jusqu'en novembre 2021**

Conditions

1. La possession de cette carte ne signifie nullement que son détenteur représente un organisme d'inspection certifiée en vertu de la norme CSA W178.1 et ayant du personnel et des procédures approuvées par le Bureau canadien de soudage.
2. Cette carte demeure la propriété du Bureau et peut être rappelée en tout temps.
3. L'usage de la présente carte à des fins frauduleuses peut entraîner son annulation.

Pour toute question concernant cette qualification, veuillez communiquer avec :

1-800-844-6790 | www.cwbgroup.org

Item 4 - Inspector Qualifications - Sylvain Germain (NDE)

Inspecteur en Soudage Certifié

SYLVAIN GERMAIN No. Enr# 4935

est un Inspecteur en soudage certifié de Niveau3 et satisfait aux exigences de la norme CSA W178.2 « Qualification des inspecteurs en soudage ».

Valide jusqu'au avril 30, 2020

Cette certification est valide pour le(s) code(s) et/ou la norme(s) suivant(es) :

CSA W47.1-09/W59-13

Expiration de recertification après 6 ans avril 30, 2020

Conditions

1. La possession de cette carte ne signifie nullement que son détenteur représente un organisme d'inspection certifié en vertu de la norme CSA W178.1 et ayant du personnel et des procédures approuvées par le Bureau canadien de soudage.

WELDING PROCEDURE SPECIFICATION NUMBER SAW-1
Submerged Arc Welding

1 SCOPE

This Welding Procedure Specification covers welding and related operations of steel structures that are fabricated in accordance with the terms outlined in CSA Standard W47.1 and W59, latest revisions. The attached Data Sheets for an essential part of this specification.

A change in any of the essential variables contained in the succeeding paragraphs or detailed on applicable Welding Procedure Data Sheets shall require a new Welding Procedure Specification and/or new Welding Procedure Data Sheets.

2 WELDING PROCEDURE

The welding shall be done automatically or semi-automatically using the SAW (Submerged Arc Welding) process.

Joints shall be made following the procedural stipulations indicated in CSA Standard W59 and may consist of single or multiple passes, in accordance with the approved welding procedure data sheets to which this specification refers.

3 BASE MATERIAL

The base metal shall conform to the specifications for the steel groups 1, 2, and 3 per Table 11.1 or Table 12.1 of CSA W59. Other groups may be welded providing the Canadian Welding Bureau accepts the Welding Procedure Data Sheets (WPDS).

4 BASE METAL THICKNESS

Base metal thickness from over 3.2 mm (⅛") to an unlimited thickness (inclusive) may be welded under this specification providing the respective welding procedure data sheets have been supplied and approved for an appropriate weld size.

5 FILLER METAL

The filler metal shall conform to specification for CSA Standard W48 and shall be compatible with the base metal, as specified in Table 11.1 and 12.1 of CSA Standard W59. The classification of electrode to be used is shown on the appropriate Welding Procedure Data Sheet.

5.1 Storage and Conditioning of Electrodes and Fluxes

Electrodes (wire) shall be stored in a clean, dry environment in original containers until ready for use. All wire contaminated by surface rust or foreign material shall be discarded.

Flux used for SAW shall be dry and free from contamination of dirt, mill scale or other foreign material. All flux shall be purchased in packages capable of being stored under normal conditions for at least six (6) months without such storage affecting its welding characteristics or weld metal properties. Flux from damaged packages that have been exposed to free moisture shall be discarded or shall be dried before use in shallow layers (2 in. / 50 mm maximum) at a minimum temperature of 500°F (260°C) for at least one (1) hour or at time and temperature conditions as recommended by the flux manufacturer. Any flux that has been fused during welding shall not be reused

6 POSITION

The welding shall be done in the flat position or horizontal positions provided approved Welding Procedure Data Sheets referring to those positions and this procedure specification are followed.

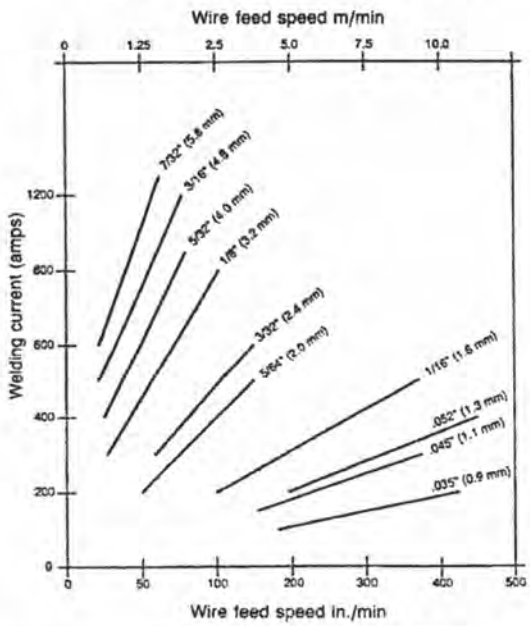
7 PREHEAT

The minimum preheat before welding will comply with Table 5-3 shown in the CSA Standard W59. Welding will be done at sufficient speed to ensure that the minimum preheat is maintained or exceeded.

If welding is interrupted for some time so that the temperature of the base metal falls below the minimum preheat temperature, then arrangements will be made to preheat again prior to recommencing welding.

The weldment shall be allowed to cool to the ambient temperature, without an external quench media being supplied. In other words, cooling water or placement in frigid conditions that cause a quick temperature change shall not be used.

8 HEAT TREATMENT AND STRESS RELIEVING



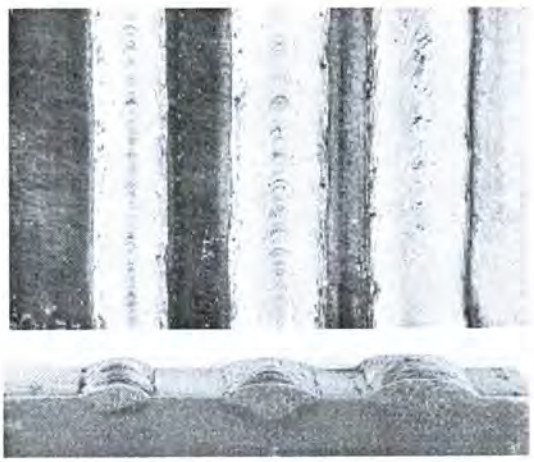
This will not be applicable to structures welded under this specification unless a specification showing all the parameters is submitted to the Canadian Welding Bureau and approval is obtained.

9 ELECTRICAL CHARACTERISTICS WELDING TECHNIQUE

The Welding Procedure Data Sheets show details of the electrical characteristics to be used. The current used shall be direct current (DC) or alternating current (AC) as indicated on the welding procedure data sheets. However, unless otherwise noted on the data sheets or recommended by the consumable supplier, current and voltage ranges and electrode stick outs shall be as shown below:

Wire Diameter, in.	Current Range DC(+), amp	Arc Voltage Range	Stick out (standard), in
1/16	150 – 400	19 – 37	5/8" - 1 ¼"
5/64	200 – 600	20 – 37	5/8" - 1 ¼"
3/32	350 – 700	22 – 37	5/8" - 1 ¼"
1/8	300 – 900	23 – 37	5/8" - 1 ¼"
5/32	400 – 1000	25 – 37	5/8" - 1 ¼"
3/16	500 - 1100	27 – 37	5/8" - 1 ¼"
7/32	600 – 1200	30 – 37	5/8" - 1 ¼"
1/4	700 - 1600	30 – 38	5/8" - 1 ¼"

CURRENT (AMPS) VS. WIRE FEED SPEED
DC(+) Polarity, Single Arc, **Normal Stickout**



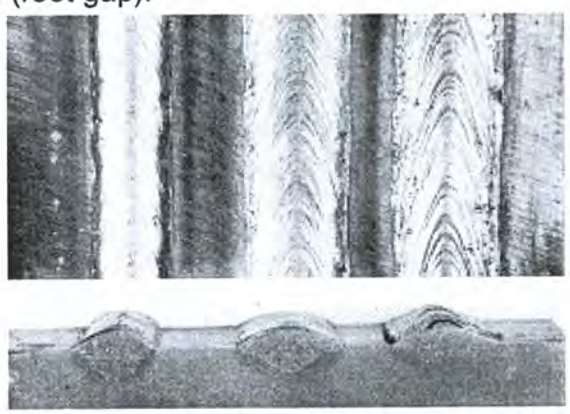
9.1 Effect of Parameters

9.1.1 Amperage

Increasing the amperage results in an increased deposition rate and penetration

Amperage too high
- Unstable arc
- Undercutting
- High narrow bead
- Burn through

Amperage to Low
- Unstable Arc
- Poor Penetration



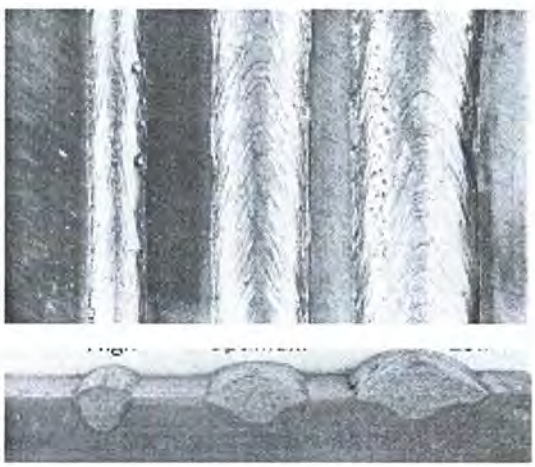
Weak Medium Strong

9.1.2 Voltage

An increased in voltage will increase the arc length, create a flatter and wider bead, increases flux consumption, improves slag removal; reduce penetration; increases resistance to porosity caused by rust or scale; increase alloy pick-up from the flux and will reduces flattening (root gap).

Voltage too high
- Produces a "hat-shaped" bead (cracking)
- Poor slag removal
- Concave fillet weld - crack-sensitive
- Increases transfer of alloying elements
- Undercuts at weld connection

Voltage too low
- Produces a high, narrow bead



Low Medium High

Poor slag removal

9.1.3 Welding (Travel) Speed

Welding speed greatly affects penetration and bead shape. An increase in speed will reduce penetration, increases tendency to undercut, increase possibility of arc blow, increases porosity, can cause an irregular bead and may result in bad degassing.

If your welding speed too low it may result in bead profile subject to cracking, arc visibility, large difficult to control molten pool, rough looking bead, slag inclusions, make it difficult to remove slag and causes a risk of burn through

Low Medium High

10 PREPARATION OF BASE MATERIAL

The edges or surfaces of parts to be joined by welding shall be prepared by suitable means (e.g. Oxy-acetylene, plasma, etc.). Where hand cutting is involved the edge will be ground to a smooth surface. All surfaces and edges shall be free from fins, tears, cracks or any other defects that could adversely affect the quality of the weld.

All loose or thick scale, rust, moisture or other foreign material that would prevent proper welding or produce objectionable fumes shall be removed.

Typical joint preparations can be found in the appendix of this WPS.

11 TREATMENT OF UNDERSIDE OF WELDING GROOVE{tc \l2 "12.0 TREATMENT OF UNDERSIDE OF WELDING GROOVE}

Prior to depositing weld metal on the underside of a welding groove, the root shall be back gouged to sound metal, unless otherwise specified on the applicable data sheet.

Machining, air carbon arc or oxygen gouging, chipping or grinding may be used for back gouging.

12 QUALITY

Cracks or blowholes that appear on the surface of any pass shall be removed before depositing the next covering pass. The procedure and technique shall be such that undercutting of base metal or adjacent passes is minimized. Fillet and butt welds shall be meet the desirable or acceptable fillet weld profiles shown in Figure 5.4 of CSA Standard W59. The reinforcement in groove welds shall not exceed 3 mm (1/8") and shall have a gradual transition to the plane of the base metal surface. In general, the weld quality will be such as to meet the requirements of Clause 11.5.4 or 12.5.4 (as applicable) of CSA W59.

13 WELD METAL CLEANING

Glass remaining after a pass shall be removed before applying the next covering pass. Prior to painting, all glass shall be removed and the parts shall be free of loose scale, oil and dirt.

14 DATA SHEETS

Welding Procedure Data Sheets are specifications setting broad guidelines for the shop and field welding practice of the fabricator for each anticipated combination of essential variables. From the practical point of view, it is essential to include all variables that would make the weld easier or more difficult to make. The practical men will find that this will cover suitable tolerances for the geometry of joint and the other parameters involved.

The attached data sheets form part of this specification.

15 TROUBLE SHOOTING

The solutions below should only be used where they do not conflict with the Welding Procedure Data Sheets. Contact welding engineer for problems that cannot be corrected without conflict

Problem	Causes
Porosity	- Moist flux - Rust, carbon deposit or paint on plate surface - Oxidized electrode wire - Base metal chemistry - Contaminants - Excessive or insufficient flux thickness
Lack of Penetration	- Excessive root face - Insufficient amperage or wire speed - Travel speed too high - Voltage too high - Bad positioning of electrode wire - Excessive final length
Lack of Fusion	- Amperage too low - Travel speed too high - Bad positioning of electrode wire - Presence of carbon deposits or other foreign matters
Undercutting	- Travel speed too high - Excessive amperage - Excessive voltage - Bad positioning of electrode wire (angle, distance)
Hot Cracking	- Bad width/depth radio - Base metal chemistry (presence of sulphur, carbon or phosphor) - Presence of contaminants - Concave fillet weld - Stress

Cold Cracking	- Presence of hydrogen - Inappropriate pre-heat - Base metal chemistry - Tack welds too small
Unstable arc	- Check wire feed system

Prequalified Complete Joint Penetration Groove Welds for the Submerged Arc Welding Process (SAW)

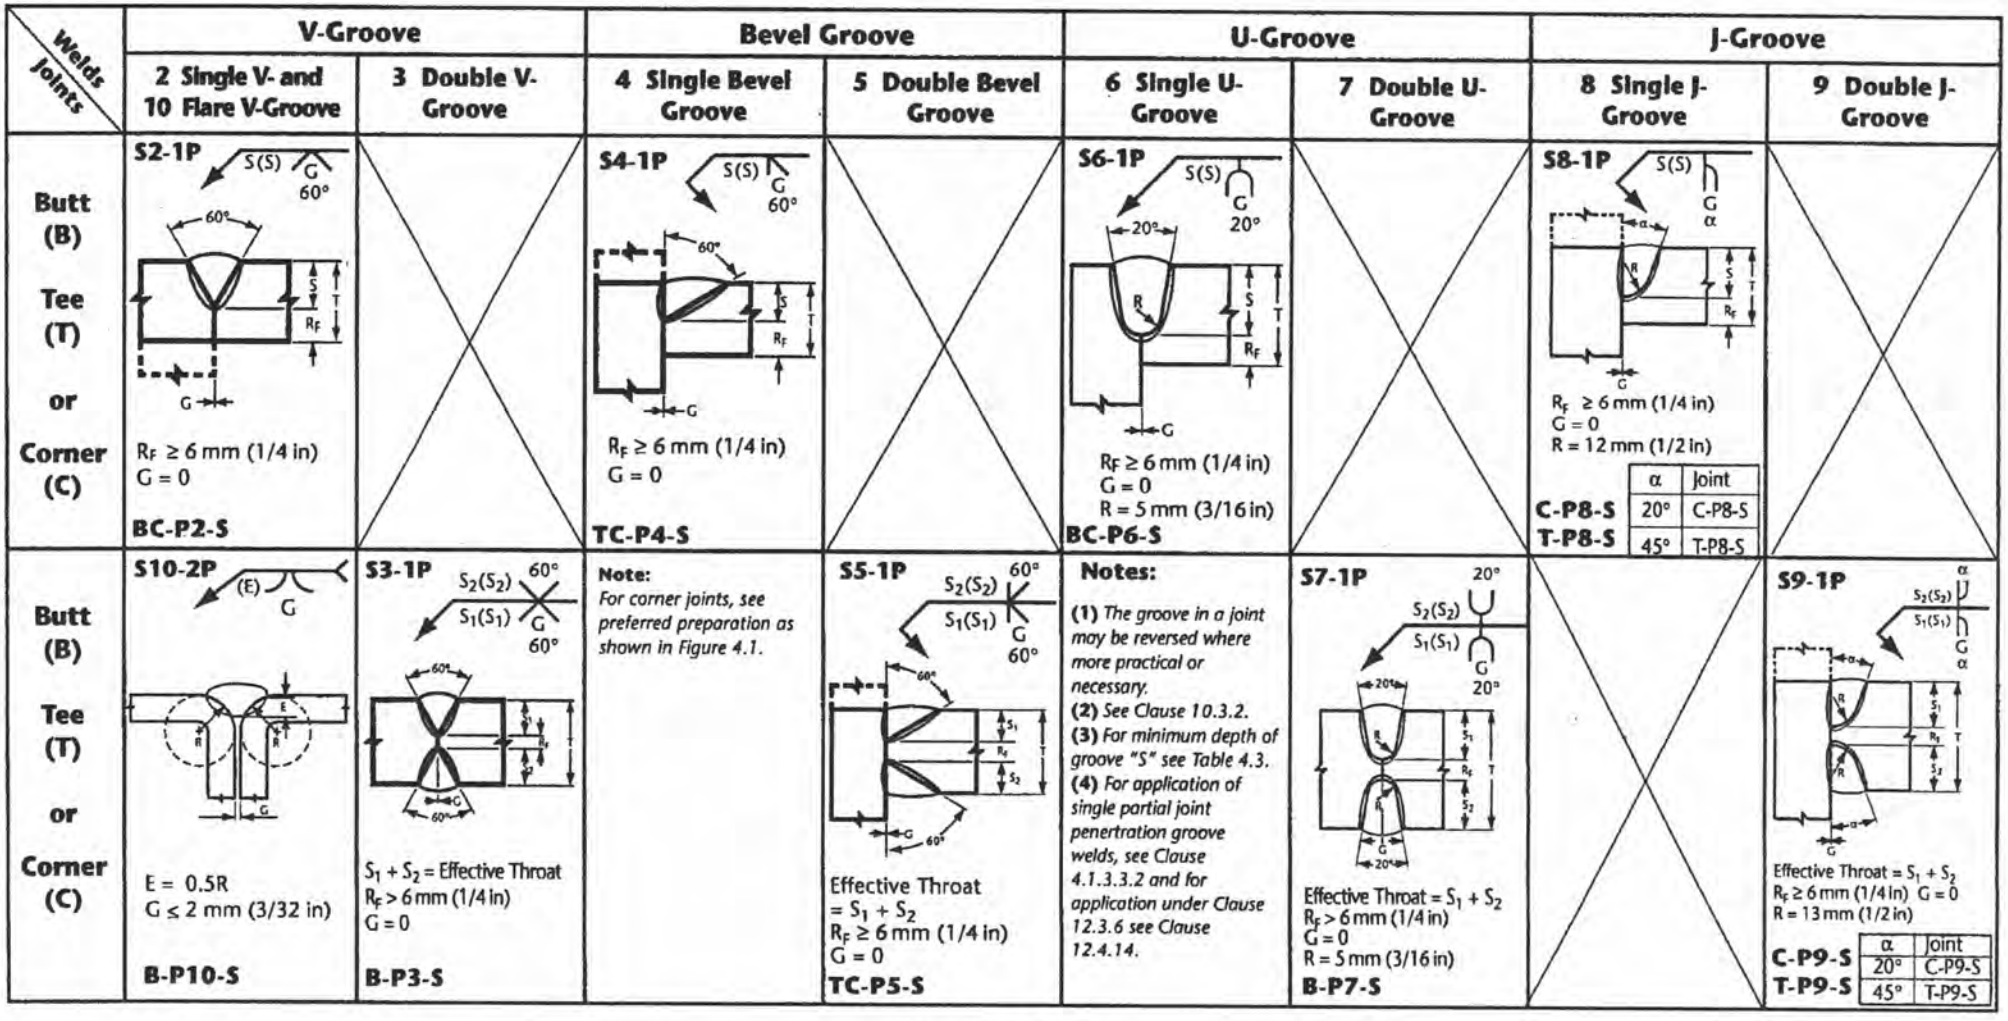

Figure 10.4
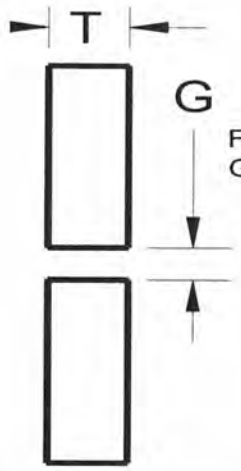
Prequalified Partial Joint Penetration Groove Welds for the Submerged Arc Welding Process (SAW)
(See Clause 10.3.2.)

Mosher ENGINEERING

WELDING PROCEDURE DATA SHEET

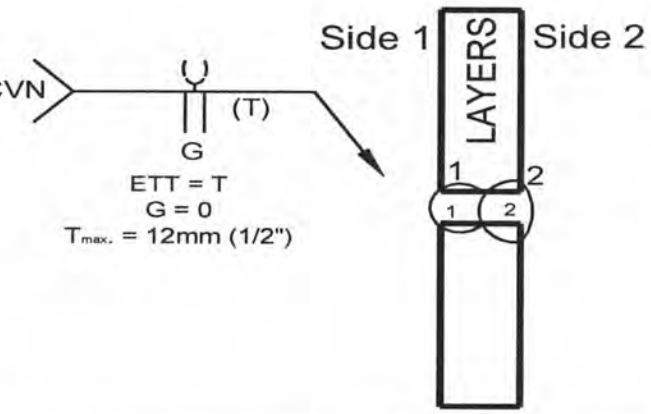
No.: **FCAW-06-CVN**

Date: May 5, 2008



Company Name:	Mosher Engineering	Wldg. Specification No:	RTR-4
Address:	1358 Queen Street	Reference WPQR:	
	Halifax Nova Scotia B3J 2H5	Ref. Standards:	CSA W47.1, W59 & W48

Material Information:



Position:	Horizontal	Welding Process:	FCAW	Consumable:	E491T-12MJ-H4
Base Mat'l:	CAN G40.21 350WT Cat. 5 (27J @-40°C)	Mode of Transfer:	Globular Transfer	Shielding Gas:	75% Ar 25% CO2
		Process Mode:	Semi-Automatic	Gas Flow:	45 ft3/h
		Tungsten Type:		Tungsten Dia.:	in

Cleaning:	Wire brush and remove slag in between passes	PHT Temp:	15°C or 59 °F
		PWHT Temp:	NA °F

Typical Joint Details:

Typical Pass & Layer Sequence:

Joint Configuration:		**Joint Details:**		**Technique & Process Information:**		
Joint Type:	Butt, Tee, Corner	G = 0.045	Θ (°) = 0	Electrical Stickout:	3/4 ± 1/8	in
Weld Type:	Complete Joint Penetration	R_F = 0		Nozzle Diameter:	1/2	in
Backgouging:	Backgouged to Sound Metal			Average Deposition Rate:	7.0	lbs/h

Welding Parameters:

Revision Status:

Date:	Explanation:
22/07/2008	Per PQR P5745

NOTES:

1. Use stringer beads only. Restrict weld bead to ≤ 16 mm.
2. Weld Sizes represent effective weld throat thickness for qualified T range.
3. Target heat inputs at calculated average.
4. Tack weld parameters to be per main weld parameters
5. Backgouge as necessary to repair side 2.

Revision Status:

Date:	Explanation:
22/07/2008	P036388

NOTES:

1. Use stringer beads only. Restrict weld bead to ≤ 16 mm.
2. Weld Sizes represent effective weld throat thickness for qualified T range.
3. Target heat inputs at calculated average.
4. Tack weld parameters to be per main weld parameters
5. Backgouge as necessary to repair side 2.

On the Basis of **PREVIOUS TESTS ACCUMULATED BY THE CWB**

Revision Status:

Date:	Explanation:
22/07/2008	Per PQR P5745

NOTES:

1. Use stringer beads only. Restrict weld bead to ≤ 16 mm.
2. Weld Sizes represent effective weld throat thickness for qualified T range.
3. Target heat inputs at calc'd average. Max. Heat Input to 46.7 kJ/in

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
GENERAL NOTES		REGISTERED PROFESSIONAL ENGINEER N. T. ROSE SIGNATURE 02/03/28 PROVINCE OF NOVA SCOTIA

1. General Notes

1.1 The Welding Standards of this firm are prepared in accordance with CSA Standard W47.1 - 1992. All welding will be performed in conformance with CSA Standard W59 - M1989, and to any revisions to the above mentioned Codes.

1.2 All welding operators employed will be qualified in accordance with CSA W47.1 and will be allowed to weld only the classifications (T and S), and positions for which they are qualified. They shall use only those welding processes and electrode classifications for which they are qualified.

1.3 Any welding sub-contracted by this form will be sublet only to firms approved and certified to CSA W47.1 - 1992 by the Canadian Welding Bureau. Drawings and welding procedures will be issued to the above sub-contractor so that welding quality is insured. (The subcontractor's CWB approved welding procedure may be used if satisfactory to the prime contractor.)

1.4 Changes in welding methods or welding engineering standards and additions to joints welded will be submitted to CWB for approval in accordance with Clause 6.4 of CSA Standard 47.1 before being used in production.

1.5 Only electrodes approved under CSA electrode standard or those conditionally approved under CSA Standard W47.1 shall be used. Each welding procedure data sheet will designate the electrode(s) to be used for the joint, the applicable codes and the number of the welding procedure specification which governs the data sheet application.

1.6 The individual data sheets will show the material specification(s) which may be welded.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
GENERAL NOTES		REGISTERED PROFESSIONAL ENGINEER · PROVINCE OF NOVA SCOTIA · R. T. ROSE SIGNATURE 02/03/28

1.7 Unless called for otherwise on a specific data sheet, vertical welds shall be made with progression of each pass in an upward direction.

1.8 All slag or flux remaining on any bead of welding shall be removed before laying down the next successive bead. Similarily with any new cracks, blow holes or porosity.

1.9 Metal surface to be welded shall be dry, clean and free from loose scale, paint and grease.

1.10 Specially designed anti- spatter compounds shall be used where called for on shop drawings.

1.11 No welding shall be done when temperature of the base metal is lower than -18 C (0 F) except with the express consent of the engineer. At temperatures below 0 C (32 F) the surfaces of all areas within 75mm (3") of the joint where a weld is to be deposited, shall be heated to a temperature at least warm to the hand before welding is commenced.

1.12 The operator and the work shall be adequately protected against the direct effect of wind, snow and rain.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
2.a WELDING SYMBOLS AND BASIC JOINTS		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/28 · PROVINCE OF NOVA SCOTIA ·

1. Welding symbols shall be as shown in AWS Standard A2.4, Symbols for Welding and Nondestructive Testing. See Appendix D of CSAW59-M1989 for symbols from that Standard and additional conventions developed for incorporation into this Standard. Special requirements shall be fully explained by notes or details.

Detail of butt joints, corner joints, T-joints, lap joints and edge joints are shown in Appendix D, CSA W59-M1989. Standard location on elements of a welding symbol are also shown in this appendix.

2.c CLARIFICATION OF INTERMITTENT AND STAGGERED FILLET WELDS

CHAIN INTERMITTENT FILLET WELD

STAGGERED INTERMITTENT FILLET WELD

Note:

(a) When intermittent fillet welding is used by itself, the symbol indicates that increments shall be located at the ends of the dimensioned length.

(b) If required by actual length of the joint the length of increment of the welds at the end of the joint should be increased to terminate the weld at the end of the joint.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
2.d GENERAL DRAFTING AND DESIGN INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/28 · PROVINCE OF NOVA SCOTIA ·

(1) Welds on both sides of the joint shall be shown by placing weld symbols on both sides of the reference line. The size of a fillet weld or groove weld (Depth unless it is complete joint penetration) shall be shown to the left of the weld symbol.

The length of a fillet or groove weld, when indicated on the welding symbol, shall be shown to the right of the weld symbol. Unless otherwise indicated on the welding symbol all welds shall be continous.

When no general note governing the dimensions of fillet welds or groove welds appears on the drawing the dimensions of fillet welds and groove welds on both sides of the joint shall be shown as follows.

(a) When both welds have the same dimensions, both shall be dimensioned.

(b) When the welds differ in dimensions, both shall be dimensioned.

(2) Symbols apply between abrupt changes in the direction of the welding or to the extent of hatching or dimension lines. Weld extending beyond abrupt changes in the direction of the welding shall be indicated by means of additional arrow points to each section of the joint to be welded. The above applies except when the weld all around symbol is used.

(3) When desired, General Notes, may be placed on a drawing to provide detailed information pertaining to predominant welds.

i.e. Unless otherwise indicated all fillet welds are 8mm (5/16") in size.

Such information need not be repeated on the symbol.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
2.d GENERAL DRAFTING AND DESIGN INFORMATION		REGISTERED PROFESSIONAL ENGINEER R. T. ROSE SIGNATURE 02/03/29 PROVINCE OF NOVA SCOTIA

(4) When only one member of a joint is to be prepared the arrow shall point with a definite break toward that member.

(5) All welds to be called up in Imperial Units unless drawing is designated as a metric drawing in which case all welds will be in Metric Units.

(6) The following finishing symbols, indicate the method, not the degree, of finish required for a weld.

C - Chipping

R - Rolling

G - Grinding

H - Hammering

M - Matching

The above does not include for normal cleaning which is always required after each weld pass.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE · 02/03/28 · PROVINCE OF NOVA SCOTIA ·

3.a Fillet Welds

1. The effective area of a fillet weld shall be the effective weld length multiplied by the effective throat thickness.

2. The effective length of a fillet weld shall be the overall length of the full-size fillet, including end returns. No reduction in effective length shall be made for either the start or termination of the weld if the weld is full size throughout its length.

3. The effective length of a curved fillet weld shall be measured along the centreline of the effective throat.

4. The effective throat thickness shall be the shortest distance from the root to the face of the diagrammatic weld for all processes except SAW which will be governed by CSA W59-4.3.2.4.

5. Fillet welds may be used in skewed T-joints having a dihedral angle of not less than 60 degrees nor more than 120 degrees as shown in figure 4-2 and clause 4.3.2.5 of CSA W59-M1989

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE · 02/03/28 · PROVINCE OF NOVA SCOTIA ·

3.A Fillet Welds

4. The maximum fillet weld size permitted along the edge of material shall be:

   (a) The thickness of the material for material less than 6mm (1/4") thick.

   (b) 2mm(1/16") less than the thickness of material for 6mm (1/4") or more in thickness unless the weld is designated on the detail drawing to be built out to obtain full throat thickness.

   (c) The size of fillet welds on top of groove welds when required by the engineer for smoother transiton in "T" and corner joints shall not be less that t/4 where it is the thickness of the groove welded member, but need not to be more than 10mm (3/8"). They shall be mandatory for T-Joint subject to tension normal to the axis of the weld.

5. The minimum effective length of a fillet weld shall be 40mm (1 1/2") or 4 times the size of the fillet whichever is larger.

6. Fillet welds may be continous or intermittent except for CSA W59-12.4.14. 1.d which notes restriction on the use of intermittent welds in dynamically loaded structures.

7. The minimum overlap of parts in stress carrying lap joints shall be 5 times the thickness of the thinner part joined. Unless lateral deflection of the parts is prevented, they shall be connected by two transverse lines of fillet, or by longitudinal fillet welds along the edges or in slots.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/20 · PROVINCE OF NOVA SCOTIA ·

3.A Fillet Welds

8. Fillet welds shall not terminate at corners of parts of members but shall be returned continously, full size around the corner for a length equal to twice the weld size where such return can be made in the same plane.

9. The minimum fillet size as measured shall be shown in the table below (Table 3-1). Except that the weld size need not exceed the thickness of the thinner part joined unless a larger size is required by calculated stress. For this exception particular care shall be taken to provide sufficient heat input to ensure weld soundness.

When welding attachments to members which do not carry calculated stress, the requirements of the table below need not apply.

TABLE 3-1 MINIMUM FILLET SIZE

MATERIAL THICKNESS OF THICKER PART JOINED IN MILLIMETERS (INCHES)	MINIMUM SIZE OF FILLET WELD IN MILLIMETERS (INCHES)	
To 12mm (1/2") Inclusive	5mm (3/16")	Single Pass welds Must be used
Over 12mm (1/2") to 20mm (3/4")	6mm (1/4")	
Over 20mm (3/4")	8mm (5/16")	

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/28 · PROVINCE OF NOVA SCOTIA ·

3.b Groove Welds

1. A complete penetration groove weld is defined as one made from one side on a backing bar or on both sides combined with back gouging to provide complete penetration and fusion of weld and base metal throughout the depth of the joint.

2. The effective area of a groove weld shall be the effective weld length multiplied by the efective throat thickness.

3. The effective throat thickness of a complete joint penetration groove weld shall be the thickness of the thinner part joined. (No increase is permitted for weld reinforcement.).

4. The minimum groove depth of single partial joint penetration groove welds or on each side of double partial joint penetration groove welds shall be in accordance with the Table 3.2 on page 12.

5. For details of Plug and Slot Welds refer to section 4.4.2 of CSA W59-M1989

6. For details of Flare Grooves and their effective throats refer to Section 4.3.1.6 of CSA W59-M1989

3 SUPPLEMENTARY WELD INFORMATION

MINIMUM GROOVE DEPTH FOR PARTIAL JOINT PENETRATION GROOVE WELDS (NOT COMBINED WITH FILLET WELDS) TABLE 3-2

THICKNESS OF THICKER PART JOINED IN MILLIMETERS	MINIMUM GROOVE DEPTH	
	Groove Angle At Root > 45 < 60 (V, Bevel Grooves)	Groove Angle At Root > 60 (V, bevel J-,U-Grooves)
To 12mm (1/2") Inclusive	8mm (5/16")	5mm (3/16")
Over 12mm (1/2") to 20mm (3/4") Inclusive	10mm (3/8")	6mm (1/4")
Over 20mm (3/4") to 40mm (1 1/2") Inclusive	12mm (1/2")	8mm (5/16")
Over 40mm (1 1/2") to 60mm (2 1/4") Inclusive	14mm (9/16")	10mm (3/8")
Over 60mm (2 1/4") Inclusive	16mm (5/8")	12mm (1/2")

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · PROVINCE OF NOVA SCOTIA · R. T. ROSE SIGNATURE 02/03/28

3.b Groove Welds

5. The effective throat thickness of a partial joint penetration groove weld for joints with no root openingshall be the depth of camfer less 3mm (1/8") for grooves having an included angle at the root of the groove less than 60 but not less than 45 .

6. The effective throat thickness of a partial joint penetration groove weld shall be the depth of camfer for grooves having an included angle at the root of the groove of 60 or greater.

7. The effective throat thickness of a partial joint penetration groove weld reinforced with a fillet weld shall be the shortest distance between the root of the groove and the surface of the fillet less 3mm (1/8") where such reduction is required by Paragraph (5).

8. For hollow structural sections the effective throat thickness of Flare-V and Flare-Bevel Groove welds shall be established by the contractor. Unless otherwise approved by the engineer, this shall be done by means of trial welds for each set of procedural conditions shall then be sectioned and measured to establish welding techniques which will ensure that the design throat thickness is achieved in production.

4 SHOP STANDARDS

4.a Acceptable and Unacceptable Weld Profiles

TABLE - 1

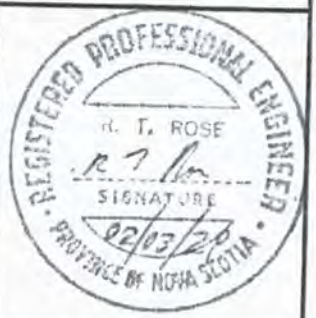
Notes:

(1) *The faces of fillet welds may be slightly convex, flat, or slightly concave. Except at outside corner joints, the convexity shall not exceed 0.07 x width of face or bead + 1.5 mm.*

(2) *The finishing passes of all groove welds in butt joints shall provide a reinforcement at the centre of weld not exceeding 3 mm. The reinforcement shall be built up uniformly from the surface of the parent metal to a maximum at the centre of the weld. There shall be no valley or groove along the edge or in the centre of the weld. The deposited metal shall be smooth and uniform in cross-section.*

4 SHOP STANDARDS

4.b Splicing



1. Connections or splices in beams or girders when made by groove welds shall be complete penetration groove welds, unless otherwise approved by the Engineer.

2. Splices of tension members made by groove welds shall be complete joint penetration groove welds unless otherwise approved by the Engineer.

3. All shop splices in each component of a cover-plated or built-up member shall be made before such component part is welded to other component parts of the member.

4. Tension butt joints in plates of different material thickness or widths shall be made in such a manner that the slope through the transistion zone is not steeper thatn 1 in 2 1/2. The transisiton shall be accomplished by chamfering the thicker part, tapering the wider part, slopeing the weld metal, or by any combination of these.

5. Compression butt joints do not require a transistion zone in members of different thickness or width, if approved by the Engineer.

4 SHOP STANDARDS

4.c Preparation of Material (From CSA W59-M1989 Clause 5.3)

1. Surfaces and edges to be welded shall be smooth, uniform and free from fins, cracks and other defects that would adversely affect the quality or strength of the weld. Surfaces to be welded shall also be free, within 50 mm (2") of any weld locations, from loose or thick scale (except for tightly adhering small islands of scale), slag, loose rust, paint, grease, moisture and other foreign material that will prevent welding to meet acceptance levels of this standard or produce objectionable fumes.

2. Preparation of edges for welding shall be smooth and regular and shall be left free of slag. The edges resulting from cutting shall be smoothed when necessary to provide a surface equivalent to that specified in Clause 5.3 (CSA W59) (Pre-ceding paragraph). All re-entrant corners shall be shaped, notch-free, to a radius of at least 15mm. All cutting shall follow closely the lines prescribed. Oxygen gouging not to be used on quenched and tempered steels.

3. For reference to occassional notches and their repair see Clause 5.3.2 CSA W59-M1989 and for planar edge discontinuities refer to Clause 5.3.3 CSA W59-M1989

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
4 SHOP STANDARDS		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE · 02/03/28 · PROVINCE OF NOVA SCOTIA ·

4.d Assembly Practices

1. The parts to be joined by fillet welds shall be brought into as close contact as practicable, (see Clause 54.1 of CSA W59-M1989) and in no event shall be separated by more than 5mm (3/16"). If the separation is 1mm (1/32") or greater, the size of the fillet weld shall be increased by the amount of the separation. The separation between faying surfaces of lap joints and of butt joints landing on a backing shall not exceed 2mm (1/16"). Where irregularities in rolled shapes or plates after straightening, do not permit contact within the above limits, the procedure necessary to bring the material within these limits shall be subject to the approval of the Engineer. The use of fillers is prohibited except as specified on the drawings or as specially approved by the Engineer, and made in accordance with Clause 4.5 CSA W59-M1989.

   Abutting parts to be joined by groove welds shall be carefully aligned. Where the parts are effectively restrained against bending due to eccentricity in alignment, an offset not exceeding 10% of the thickness of the thinner part joined, but in no case more than 3mm (1/8"), may be permitted as a departure from the theoretical alignment. In correcting misalignment in such cases, the parts shall not be drawn into a greater slope than 1 in 25. Measurement of offset shall be based upon midplane of parts unless otherwise shown on the drawings.

Members to be welded shall be brought into correct alignment and held safely in position until welding has been completed. Suitable allowances shall be made for warpage and shrinkage.

4 SHOP STANDARDS

4.e Allowable Workmanship Tolerances from Detailed Drawings

Dimensions of the cross-section of groove welded joints which vary from those on the detail drawings by more than the following workmanship tolerances shall be corrected as per Appendix C, Clause C1.1 (f) (CSA W59), or referred to the Engineer for approval.

	Root Not Gouged	Root Gouged
a) Root Face of Joint	+/- 2mm (1/16")	Not limited
b) Root Opening of Joints without steel backing	+/- 2mm (1/16")	+ 2mm (1/16") - 3mm (1/8")
Root Opening of Joints with steel backing	+ 6mm (1/4") - 2mm (1/16")	Not applicable Not applicable
Root openings wider than permitted by the above tolerances but not greater than twice the thickness of the thinner part of 20mm maximum be built up be welding to acceptable dimensions prior to the joining if the parts by welding.		
c) Groove angle of Joint	+10 Degrees - 5 degrees	+10 Degrees - 5 degrees

4 SHOP STANDARDS

4.f Control of Distortion and Shrinkage Stresses

1. Insofar as practicable, all welds shall be deposited in a sequence that will balance the applied heat of welding while the welding progresses.

   Before the start of welding on a member or structure in which shrinkage stresses or distortion is likely to effect the adequacy of the structure, the program for welding sequence and distortion control shall be developed by the Contractor and submitted to the Engineer for approval.

   The direction of the general progression in welding on a member shall be from points where the parts are relatively fixed in position with respect to each other toward points where they have a greater relative freedom of movement.

   Joints expected to have large shrinkage shall normally be welded before joints expected to have lesser shrinkage and with as little restraint as possible.

   All shop splices in each component of a coverplated or built-up member shall be made before such component part is welded to other component parts of the member. With the approval of the Engineer, long girders or girder section may be made by shop splicing sub-sections, each made in accordance with this Clause (Clause 5.4, CSA W59 - M1989).

   For conditions of severe external shrinkage restraint refer to clause 5.1.7 (CSA W59-M1989).

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
4 SHOP STANDARDS		REGISTERED PROFESSIONAL ENGINEER R. T. ROSE SIGNATURE 02/03/28 PROVINCE OF NOVA SCOTIA

4.g Quality of Welds

1. Welds shall have no cracks

2. Welds shall be free from overlap

3. Undercut shall not exceed the permissable valves as given in Clauses 11.5.4 and 12.5.4 of CSA W59-M1989 for statically and Dynamically Loaded structures respectively.

4. The minimum acceptable quality of welds, including visual examination, shall confirm to clause 11.5.4 for Statically Loaded Structures, and Clause 12.5.4 for Dynamically Loaded Structures.

TAKE LASER DIAMETERS ABOUT EVERY 3 to 5 FEET AROUND THE INSIDE PERIMETER OF THE TANK FOR 180 DEGREES (HALF WAY ROUND). TAKING READINGS BOTH (ALTERNATE) SIDES OF THE CENTER POST/COLUMN.

IF DIAMETER DISTANCE IS TOO GREAT FOR LASER, THEN TAKE RADII FROM CENTER PIPE (NOT FROM A COLUMN) ABOUT EVERY 5 FEET AROUND THE INSIDE PERIMETER OF THE TANK FOR 360 DEGREES

INSP. VISUELLE / VISUAL INSP. ☐ **MAGNÉTOSCOPIE / MAGNETIC PARTICLES** ☒ **RESSUAGE / LIQUID PENETRANT** ☐ **ULTRASONS / ULTRASONIC** ☒

DESCRIPTION :

Magnetic inspection and Ultrasonic inspection on tank 3

The client is opting to use an ultrasonic testing, instead of radiographic testing & Magnetic testing on nozzles and bottom weld to the shell.

Remark: Visual testing was performed by client.

INSP. VISUELLE / VISUAL INSP.

NORME : **SPECIFICATION :**

N° équip. : **Equip. no :** N/A

Instrument : USM GO+ **Couplant :** Echogel **Échelle/Sweep length :**

N° équip./Equip. no : UT-Q-34 **Palpeur/Transducer :** 0 degre and 70 degre

RÉSULTATS/RESULTS :

Ultrasonic inspection was performed:

- on every T (where vertical weld meet horizontal weld) between first/second, second/third & third/Fourth course: **Accepted**
- On every vertical weld of first course from 1" to 7 and 53" to 59": **Accepted**
- On every vertical weld of second course from 53" to 59" **Accepted**
- On horizontal see pictures 2 and 3 for 6 locations: **Accepted**

Magnetic particles inspection was performed on angle joint between the shell and nozzles, and joint between bottom weld and shell inside and outside:

- -**Inside tank**: weld between shell and nozzle & weld between shell to the bottom weld at 100%: by magnetic particles inspection: **Accepted**
- -**Outside tank**: weld between shell/pad, & weld between pad/nozzle & weld between shell/bottom weld at 100% (note 1) by magnetic particles inspection: **Accepted**

Note1: 16 nozzles including 4 manholes; one nozzle outside does not have pad. Please refer to drawing 295-M11; part section J-J item #39. This nozzle corresponds to a ¾" coupling for a water temperature gauge in the shell and the client has advised that no repad is needed for this specific coupling.

N° équip./Equip. no : UT-Q-34 **Palpeur/Transducer :** 0 degre and 70 degre

RÉSULTATS/RESULTS :

Ultrasonic inspection was performed:

- on every T (where vertical weld meet horizontal weld) between first/second, second/third & third/Fourth course: **Accepted**
- On every vertical weld of first course from 1" to 7 and 53" to 59": **Accepted**
- On every vertical weld of second course from 53" to 59" **Accepted**
- On horizontal see pictures 2 and 3 for 6 locations: **Accepted**

Magnetic particles inspection was performed on angle joint between the shell and nozzles, and joint between bottom weld and shell inside and outside:

- -**Inside tank**: weld between shell and nozzle & weld between shell to the bottom weld at 100%: by magnetic particles inspection: **Accepted**
- -**Outside tank**: weld between shell/pad, & weld between pad/nozzle & weld between shell/bottom weld at 100% (note 1) by magnetic particles inspection: **Accepted**

Note1: 16 nozzles including 4 manholes; one nozzle outside does not have pad. Please refer to drawing 295-M11; part section J-J item #39. This nozzle corresponds to a ¾" coupling for a water temperature gauge in the shell and the client has advised that no repad is needed for this specific coupling.

Item 19 - Bolts and Nuts - Torque Wrench Specs

Certification of Calibration
For Torque Wrench Used to Seal Shell Manholes

Certification of calibration					
Model : 8229239 Calibrator :			Serial No : E20140321 Date : 2014-10-21		
Set Torque	Min	Max	Actual Readings		
100FT	96.0	104.0	101.3	101.6	101.9
400FT	384.0	416.0	400	407.1	407.9
700FT	672.0	728.0	712.1	712.7	712.5

Item 20 - Final

Contents

1. Name Plate Scan
2. Punch List
3. Manufacturer's Certification (3rd Party)
4. Data Sheet (Innage)

Item 20 - Final - Name Plate Scan

Inukshuk Construction Limited

Item 20 – Final – Punch List

ICL Project No.: 295 Tank No.: 3 Client: AEM Site: Portal #1

Punch List

Initial When Complete

Description	To be Completed By	ICL	Client
Weld stairway and platform handrails together to eliminate pinch points		JC	

MANUFACTURER'S CERTIFICATION FOR A TANK BUILT TO API STANDARD 650

To **AGNICO EAGLE MINES LIMITED**

(name and address of Purchaser)

145 KING STREET EAST, SUITE 400, TORONTO, ONTARIO M5C 2Y7

We hereby certify that the tank constructed for you at

(location)

RANKIN INLET, NUNAVUT - MELIADINE FIELD ERECTED TANKS PROJECT

and described as follows: **TANK NO. 3, 18.6 M DIA X 11.2 M HIGH, 3,000 M3, FIXED CONE ROOF**

(serial or contract number, diameter, height, capacity, floating or fixed roof)

AEM PO: OC-568510

meets all applicable requirements of API Standard 650, **12th** Edition, **Addendum 2** Revision, Appendix _____ dated **JAN 2016** including the requirements for design, materials, fabrication, and erection.

NOTE: TANK STRAPPED AND COMPUTED IN ACCORDANCE WITH API STANDARD MPMS CHAPTER 2.2C.
NOTE: CAPACITY TABLE REFLECTS AN OPERATING TEMPERATURE OF 60 DEGREES F.
NOTE: LIQUID HEAD STRESS HAS BEEN APPLIED TO CAPACITY TABLE AT SPECIFIC GRAVITY 0.8500.
NOTE: A 13.9 CM CONE BOTTOM HAS BEEN APPLIED BELOW 10 CM
NOTE: NOMINAL TANK DIAMETER = 18.59 M SHELL HEIGHT = 11.16 M

DATE STRAPPED: 09/19/17 BY: RJ
DATE COMPUTED: 09/26/17 BY: WLH
DATE ISSUED: 09/26/17

Inspection Report – Handover Package for Tank #5

Handover Package Tank 5 – 250CUM

AEM PURCHASE ORDER: OC-568510
AEM PACKAGE NO.: 6515-C-260-002
PACKAGE TITLE: FUEL TANKS (SUPPLY & INSTALL)
TANK LOCATION: MELIADINE PORTAL #1

ICL Project No.: 295
ICL Document No.: 295-H5
AEM Document No.: 6515-C-260-002-141-QCR-0005_Sub001
Revision: 1

OWNER:

Agnico Eagle Mines Limited
145 King St. East, Suite 400,
Toronto, Ontario M5C 2Y7

GENERAL CONTRACTOR:

Inukshuk Construction Limited
PO Box 654
Rankin Inlet NU
X0C 0G0

Contact: David Mosher

Vendor Document Status

1 ☐	Proceed to next submission and status.
2 ☐	Proceed with exceptions as noted to next submission and status.
3 ☐	Do not proceed. Revise as noted and resubmit next submission and status.
4 ☑	Complete, no further submission required.

By: Date:

Review and authorization to fabricate are only for general conformance with the design concept of the Project as expressed in the Contract Documents. Sole responsibility for the accuracy and completeness of this document, including but not limited to dimensions and quantities, remains with the Supplier/Contractor. Agnico Eagle does not warrant the accuracy or completeness of any of the information contained herein, nor does Agnico Eagle authorize or approve any construction means, methods, techniques, sequences or any safety precautions or procedures.

Agnico Eagle No. 6515-C-260-002-141-QCR-0005 R: Sub001

DOCUMENT FOR INFORMATION

Preamble:

This package contains all QA/QC documents and drawings for the field erected fuel storage tank. The Inspection and Test Plan (ITP) serves as a Table of Contents for the Handover Package. The contents have been divided into items 1-20, and a table of contents for each item of the ITP can be found at the beginning of each section (item). The As-Built Drawings can be found at the end of this package.

This package was compiled by the General Contractor: **Inukshuk Construction Ltd.** and reviewed by Mechanical Engineer: **Kyle Brown**.

DEFINITIONS:

W - WITNESS: Specified activity to be observed by an outlined party. QC to provide the applicable party 24 hours notice of witness point.

H - HOLD: Specified component or installation to be inspected by an outlined party. No further activities specific to the component or installation may proceed until inspection is carried out. QC to provide the applicable party 24 hours notice of hold point.

R - REVIEW: Specified documentation and specifications applicable to a particular component and/or installation to be examined by an outlined party.

AT - AIR TEST: Specified component and/or installation to be air tested according to specified documentation and specifications.

DC - DIMENSION CHECK: Physical dimensions of component and/or installation to be verified according to specified documentation and specifications.

FI - FINAL INSPECTION: Specified inspection procedures to be executed prior to release of the component and/or installation and verified according to specified documentation and specifications.

NDT - NON DESTRUCTIVE TESTING: Specified component and/or installation to be inspected using a named non destructive testing method according to specified documentation and specifications.

VE - VISUAL Examination: Specified component and/or installation to be examined visually according to specified documentation and specification.

VB - VACUUM-BOX TEST: Specified component and/or installation to be vacuum box tested according to specified documentation and specifications.

WELDING PERFORMANCE QUALIFICATION

Justin Dredge **Is qualified**

As a B CLASS **Welder - Operator**

Subject to the limitations and for a period mentioned at the back of this card.

Chief Boiler and Gas Inspector (Muhammad Wani)

06/06/2017
Date of Issue

PERFORMANCE QUALIFICATION

(In accordance with section IX, A.S.M.E code)

Renewal of performance qualification is required when the welding operator named hereon has not used the specified process and materials, etc., for a period of six months or more.

06/06/2018

Expiry date dd/mm/yyyy

Inspector Qualifications - Pierre Dostie (NDE)

Inspecteur en Soudage Certifié

PIERRE DOSTIE **No. Enr# 3414**

est un Inspecteur en soudage certifié de **Niveau3** et satisfait aux exigences de la norme CSA W178.2 « Qualification des inspecteurs en soudage ».

Valide jusqu'au **février 16, 2018**

Cette certification est valide pour le(s) code(s) et/ou la norme(s) suivant(es) :

CSA W47.1/W59	**Valide jusqu'en août 2020**
ASME MII-1 IX	**Valide jusqu'en novembre 2021**
ASME B31.3	**Valide jusqu'en août 2020**
CSA W47.2/W59.2	**Valide jusqu'en novembre 2021**

Conditions

1. La possession de cette carte ne signifie nullement que son détenteur représente un organisme d'inspection certifiée en vertu de la norme CSA W178.1 et ayant du personnel et des procédures approuvées par le Bureau canadien de soudage.
2. Cette carte demeure la propriété du Bureau et peut être rappelée en tout temps.
3. L'usage de la présente carte à des fins frauduleuses peut entraîner son annulation.

Pour toute question concernant cette qualification, veuillez communiquer avec :

1-800-844-6790 | www.cwbgroup.org

Inspector Qualifications - Sylvain Germain (NDE)

Inspecteur en Soudage Certifié

SYLVAIN GERMAIN No. Enr# 4935

est un Inspecteur en soudage certifié de Niveau3 et satisfait aux exigences de la norme CSA W178.2 « Qualification des inspecteurs en soudage ».

Valide jusqu'au avril 30, 2020

Cette certification est valide pour le(s) code(s) et/ou la norme(s) suivant(es) :

CSA W47.1-09/W59-13

Expiration de recertification après 6 ans avril 30, 2020

Conditions

1. La possession de cette carte ne signifie nullement que son détenteur représente un organisme d'inspection certifiée en vertu de la norme CSA W178.1 et ayant du personnel et des procédures approuvées par le Bureau canadien de soudage.

WELDING PROCEDURE SPECIFICATION NUMBER SAW-1
Submerged Arc Welding

1 SCOPE

This Welding Procedure Specification covers welding and related operations of steel structures that are fabricated in accordance with the terms outlined in CSA Standard W47.1 and W59, latest revisions. The attached Data Sheets for an essential part of this specification.

A change in any of the essential variables contained in the succeeding paragraphs or detailed on applicable Welding Procedure Data Sheets shall require a new Welding Procedure Specification and/or new Welding Procedure Data Sheets.

2 WELDING PROCEDURE

The welding shall be done automatically or semi-automatically using the SAW (Submerged Arc Welding) process.

Joints shall be made following the procedural stipulations indicated in CSA Standard W59 and may consist of single or multiple passes, in accordance with the approved welding procedure data sheets to which this specification refers.

3 BASE MATERIAL

The base metal shall conform to the specifications for the steel groups 1, 2, and 3 per Table 11.1 or Table 12.1 of CSA W59. Other groups may be welded providing the Canadian Welding Bureau accepts the Welding Procedure Data Sheets (WPDS).

4 BASE METAL THICKNESS

Base metal thickness from over 3.2 mm (⅛") to an unlimited thickness (inclusive) may be welded under this specification providing the respective welding procedure data sheets have been supplied and approved for an appropriate weld size.

5 FILLER METAL

The filler metal shall conform to specification for CSA Standard W48 and shall be compatible with the base metal, as specified in Table 11.1 and 12.1 of CSA Standard W59. The classification of electrode to be used is shown on the appropriate Welding Procedure Data Sheet.

5.1 Storage and Conditioning of Electrodes and Fluxes

Electrodes (wire) shall be stored in a clean, dry environment in original containers until ready for use. All wire contaminated by surface rust or foreign material shall be discarded.

Flux used for SAW shall be dry and free from contamination of dirt, mill scale or other foreign material. All flux shall be purchased in packages capable of being stored under normal conditions for at least six (6) months without such storage affecting its welding characteristics or weld metal properties. Flux from damaged packages that have been exposed to free moisture shall be discarded or shall be dried before use in shallow layers (2 in. / 50 mm maximum) at a minimum temperature of 500°F (260°C) for at least one (1) hour or at time and temperature conditions as recommended by the flux manufacturer. Any flux that has been fused during welding shall not be reused

6 POSITION

The welding shall be done in the flat position or horizontal positions provided approved Welding Procedure Data Sheets referring to those positions and this procedure specification are followed.

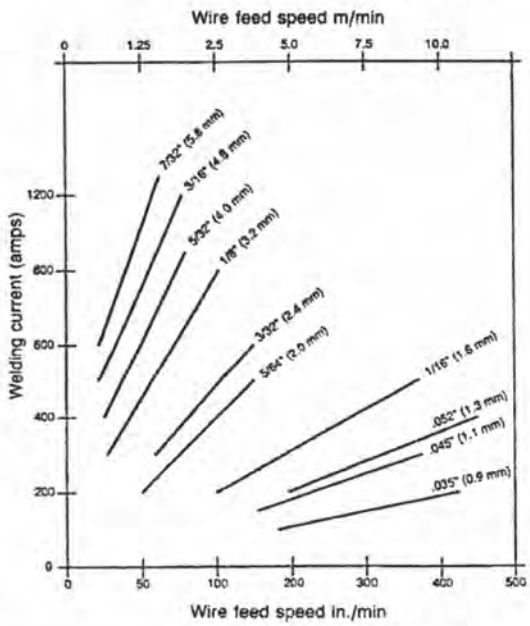
7 PREHEAT

The minimum preheat before welding will comply with Table 5-3 shown in the CSA Standard W59. Welding will be done at sufficient speed to ensure that the minimum preheat is maintained or exceeded.

If welding is interrupted for some time so that the temperature of the base metal falls below the minimum preheat temperature, then arrangements will be made to preheat again prior to recommencing welding.

The weldment shall be allowed to cool to the ambient temperature, without an external quench media being supplied. In other words, cooling water or placement in frigid conditions that cause a quick temperature change shall not be used.

8 HEAT TREATMENT AND STRESS RELIEVING



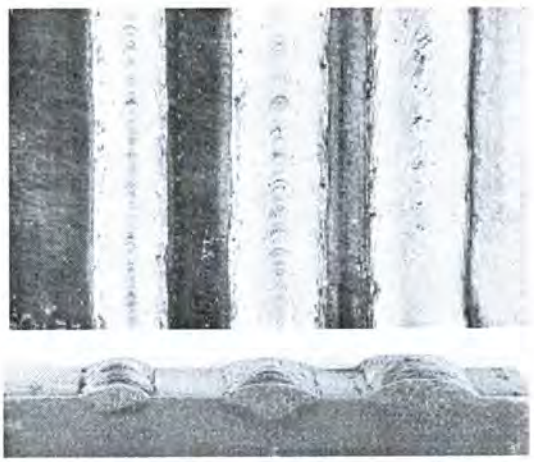
This will not be applicable to structures welded under this specification unless a specification showing all the parameters is submitted to the Canadian Welding Bureau and approval is obtained.

9 ELECTRICAL CHARACTERISTICS WELDING TECHNIQUE

The Welding Procedure Data Sheets show details of the electrical characteristics to be used. The current used shall be direct current (DC) or alternating current (AC) as indicated on the welding procedure data sheets. However, unless otherwise noted on the data sheets or recommended by the consumable supplier, current and voltage ranges and electrode stick outs shall be as shown below:

Wire Diameter, in.	Current Range DC(+), amp	Arc Voltage Range	Stick out (standard), in
1/16	150 – 400	19 – 37	5/8" - 1 ¼"
5/64	200 – 600	20 – 37	5/8" - 1 ¼"
3/32	350 – 700	22 – 37	5/8" - 1 ¼"
1/8	300 – 900	23 – 37	5/8" - 1 ¼"
5/32	400 – 1000	25 – 37	5/8" - 1 ¼"
3/16	500 - 1100	27 – 37	5/8" - 1 ¼"
7/32	600 – 1200	30 – 37	5/8" - 1 ¼"
1/4	700 - 1600	30 – 38	5/8" - 1 ¼"

CURRENT (AMPS) VS. WIRE FEED SPEED
DC(+) Polarity, Single Arc, **Normal Stickout**



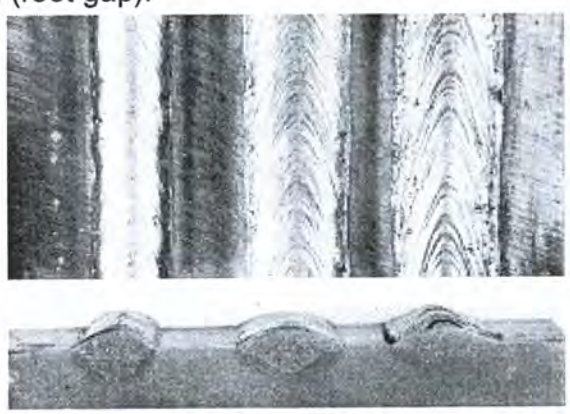
9.1 Effect of Parameters

9.1.1 Amperage

Increasing the amperage results in an increased deposition rate and penetration

Amperage too high
- Unstable arc
- Undercutting
- High narrow bead
- Burn through

Amperage to Low
- Unstable Arc
- Poor Penetration



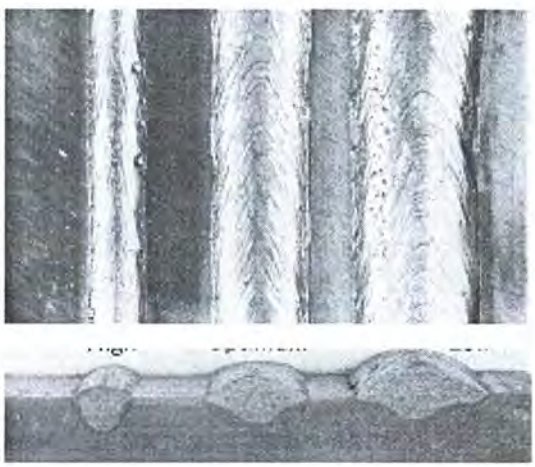
Weak Medium Strong

9.1.2 Voltage

An increased in voltage will increase the arc length, create a flatter and wider bead, increases flux consumption, improves slag removal; reduce penetration; increases resistance to porosity caused by rust or scale; increase alloy pick-up from the flux and will reduces flattening (root gap).

Voltage too high
- Produces a "hat-shaped" bead (cracking)
- Poor slag removal
- Concave fillet weld - crack-sensitive
- Increases transfer of alloying elements
- Undercuts at weld connection

Voltage too low
- Produces a high, narrow bead



Low Medium High

Poor slag removal

9.1.3 Welding (Travel) Speed

Welding speed greatly affects penetration and bead shape. An increase in speed will reduce penetration, increases tendency to undercut, increase possibility of arc blow, increases porosity, can cause an irregular bead and may result in bad degassing.

If your welding speed too low it may result in bead profile subject to cracking, arc visibility, large difficult to control molten pool, rough looking bead, slag inclusions, make it difficult to remove slag and causes a risk of burn through

Low Medium High

10 PREPARATION OF BASE MATERIAL

The edges or surfaces of parts to be joined by welding shall be prepared by suitable means (e.g. Oxy-acetylene, plasma, etc.). Where hand cutting is involved the edge will be ground to a smooth surface. All surfaces and edges shall be free from fins, tears, cracks or any other defects that could adversely affect the quality of the weld.

All loose or thick scale, rust, moisture or other foreign material that would prevent proper welding or produce objectionable fumes shall be removed.

Typical joint preparations can be found in the appendix of this WPS.

11 TREATMENT OF UNDERSIDE OF WELDING GROOVE{tc \l2 "12.0 TREATMENT OF UNDERSIDE OF WELDING GROOVE}

Prior to depositing weld metal on the underside of a welding groove, the root shall be back gouged to sound metal, unless otherwise specified on the applicable data sheet.

Machining, air carbon arc or oxygen gouging, chipping or grinding may be used for back gouging.

12 QUALITY

Cracks or blowholes that appear on the surface of any pass shall be removed before depositing the next covering pass. The procedure and technique shall be such that undercutting of base metal or adjacent passes is minimized. Fillet and butt welds shall be meet the desirable or acceptable fillet weld profiles shown in Figure 5.4 of CSA Standard W59. The reinforcement in groove welds shall not exceed 3 mm (1/8") and shall have a gradual transition to the plane of the base metal surface. In general, the weld quality will be such as to meet the requirements of Clause 11.5.4 or 12.5.4 (as applicable) of CSA W59.

13 WELD METAL CLEANING

Glass remaining after a pass shall be removed before applying the next covering pass. Prior to painting, all glass shall be removed and the parts shall be free of loose scale, oil and dirt.

14 DATA SHEETS

Welding Procedure Data Sheets are specifications setting broad guidelines for the shop and field welding practice of the fabricator for each anticipated combination of essential variables. From the practical point of view, it is essential to include all variables that would make the weld easier or more difficult to make. The practical men will find that this will cover suitable tolerances for the geometry of joint and the other parameters involved.

The attached data sheets form part of this specification.

15 TROUBLE SHOOTING

The solutions below should only be used where they do not conflict with the Welding Procedure Data Sheets. Contact welding engineer for problems that cannot be corrected without conflict

Problem	Causes
Porosity	- Moist flux - Rust, carbon deposit or paint on plate surface - Oxidized electrode wire - Base metal chemistry - Contaminants - Excessive or insufficient flux thickness
Lack of Penetration	- Excessive root face - Insufficient amperage or wire speed - Travel speed too high - Voltage too high - Bad positioning of electrode wire - Excessive final length
Lack of Fusion	- Amperage too low - Travel speed too high - Bad positioning of electrode wire - Presence of carbon deposits or other foreign matters
Undercutting	- Travel speed too high - Excessive amperage - Excessive voltage - Bad positioning of electrode wire (angle, distance)
Hot Cracking	- Bad width/depth radio - Base metal chemistry (presence of sulphur, carbon or phosphor) - Presence of contaminants - Concave fillet weld - Stress

Cold Cracking	- Presence of hydrogen - Inappropriate pre-heat - Base metal chemistry - Tack welds too small
Unstable arc	- Check wire feed system

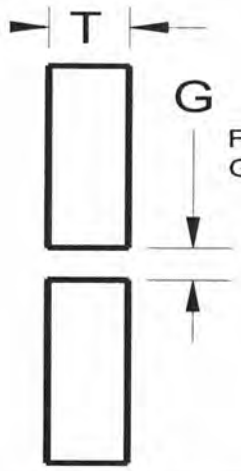
Prequalified Partial Joint Penetration Groove Welds for the Submerged Arc Welding Process (SAW)
(See Clause 10.3.2.)

Mosher ENGINEERING

WELDING PROCEDURE DATA SHEET

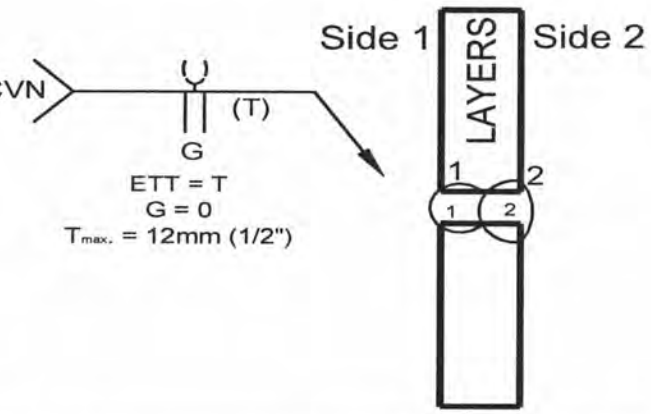
No.: **FCAW-06-CVN**

Date: May 5, 2008



Company Name:	Mosher Engineering	Wldg. Specification No:	RTR-4
Address:	1358 Queen Street	Reference WPQR:	
	Halifax Nova Scotia B3J 2H5	Ref. Standards:	CSA W47.1, W59 & W48

Material Information:



Position:	Horizontal	Welding Process:	FCAW	Consumable:	E491T-12MJ-H4
Base Mat'l:	CAN G40.21 350WT Cat. 5 (27J @-40°C)	Mode of Transfer:	Globular Transfer	Shielding Gas:	75% Ar 25% CO2
		Process Mode:	Semi-Automatic	Gas Flow:	45 ft3/h
		Tungsten Type:		Tungsten Dia.:	in

Cleaning:	Wire brush and remove slag in between passes	PHT Temp:	15°C or 59 °F
		PWHT Temp:	NA °F

Typical Joint Details:

Typical Pass & Layer Sequence:

Joint Configuration:		**Joint Details:**		**Technique & Process Information:**		
Joint Type:	Butt, Tee, Corner	G = 0.045	Θ (°) = 0	Electrical Stickout:	3/4 ± 1/8	in
Weld Type:	Complete Joint Penetration	R_F = 0		Nozzle Diameter:	1/2	in
Backgouging:	Backgouged to Sound Metal			Average Deposition Rate:	7.0	lbs/h

Welding Parameters:

Weld Size in.	Weld Size mm	Depth of Prep'n in	Side No.	Layer No. Min	Layer No. Max	Pass No. Min	Pass No. Max	Electrode Size in.	Electrode Size mm	Current (Amps) DCRP Min	Current (Amps) DCRP Max	Wire Feed Speed (in/min) Min	Wire Feed Speed (in/min) Max	Arc Volts (Volts) Min	Arc Volts (Volts) Max	Travel Speed (in/min) Min	Travel Speed (in/min) Max	Average Heat Input (kJ/in)
1/4	6.4	1/4	1	1	1	1	1	0.045	1.2	200	240	300	400	27	29	31.4	42.5	10.0
			2		2	2	2	0.045	1.2	200	240	300	400	27	29	21.0	28.4	15.0
5/16	7.9	5/16	1	1	1	1	1	0.045	1.2	200	240	300	400	27	29	25.1	34.0	12.5
			2		2	2	2	0.045	1.2	200	240	300	400	27	29	21.0	28.4	15.0
3/8	9.5	3/8	1	1	1	1	1	0.045	1.2	200	240	300	400	27	29	21.0	28.4	15.0
			2		2	2	2	0.045	1.2	200	240	300	400	27	29	21.0	28.4	15.0

Revision Status:

Date:	Explanation:
22/07/2008	Per PQR P5745

NOTES:

1. Use stringer beads only. Restrict weld bead to ≤ 16 mm.
2. Weld Sizes represent effective weld throat thickness for qualified T range.
3. Target heat inputs at calculated average.
4. Tack weld parameters to be per main weld parameters
5. Backgouge as necessary to repair side 2.

NOTES:

1. Use stringer beads only. Restrict weld bead to ≤ 16 mm.
2. Weld Sizes represent effective weld throat thickness for qualified T range.
3. Target heat inputs at calculated average.
4. Tack weld parameters to be per main weld parameters
5. Backgouge as necessary to repair side 2.

RTR FORM S-101, 1992 to CSA W47.1	**RTR ENGINEERING WELDING PROCEDURE DATA SHEET**	No. FCAW-4-IN1	Date MARCH 28, 2002

Company Name and Complete Address	**MOSHER ENGINEERING LIMITED** **2089 Upper Water Street** **Halifax, Nova Scotia, B3J 2R7**	WPS No.	RTR-4(A)
		Applicable Standard(s)	CSA W47.1, W59 & W48.
		Electrode Classification	E49XT9M-H16 X=1 or 2
Welding Process & Mode	☐ SMAW ☐ SAW ☐ GTAW (Tungsten) Type: ☒ FCAW ☐ GMAW ☐ ESW ☐ SW Size: ☐ Manual ☒ Semi-Automatic ☐ Machine ☐ Automatic	☒ Preheat Minimum as per CSA W59 ☐ Other	
Material Designation	**Steel groups 1,2 & 3 of Table 11-1 W59 for type A (without color matching), for type T (without regard to impact values)**	Welding Position: **FLAT**	Interpass Temperature: Minimum **as above**; Maximum **500 deg. F**

Sketch Of Typical Joint Preperation

Typical Pass and Layer Sequence

Groove Weld Complete Joint Penetration	Groove Weld Partial Joint Penetration	Joint Type as per CSA W59	Automatic or Semi-Automatic
☒ Back-gouged to sound metal ☐ Welded onto steel backing ☐ Other	☐ Minimum as per CSA W59 ☐ Others **Fillet Weld** ☐ Minimum as per CSA W59	☒ Butt ☐ Tee ☐ Lap ☐ Edge ☐ Corner	Electrical Stickout: **3/4" +/- 3/16"** Shielding Gas: **75Ar/25CO2** cu.ft /hr. **30-45** Flux

Material Thickness	ETT, or Fillet Size	Side No.	Layer Number	Pass Number	Electrode (in) Size (mm)	Current Polarity	Amperes +/-8%	Wire Feed Speed (in/min)	Volts +/-8%	Arc Travel Speed (in/min)

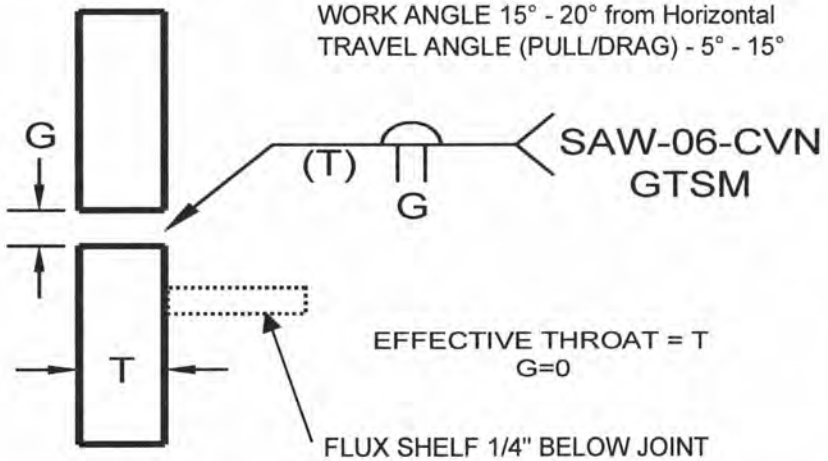
WELDING PROCEDURE DATA SHEET

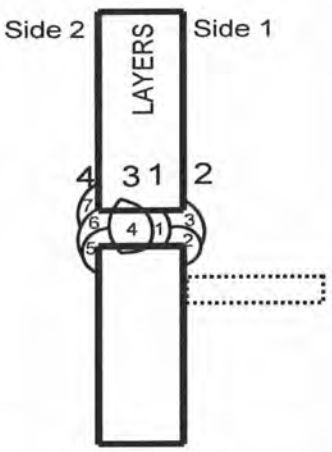
No.: **SAW-06-CVN**

Date: June 11, 2008



Company Name:	Mosher Engineering	Wldg. Specification No:	SAW-1
Address:	1358 Queen Street	Reference WPQR:	
	Halifax Nova Scotia B3J 2H5	Ref. Standards:	CSA W47.1, W59 & W48

Material Information:



Position:	Horizontal	Welding Process:	SAW	Consumable:	F7A4-EM12K-H8
Base Mat'l:	CAN G40.21 350WT Cat. 5 (27J @-40°C)	Mode of Transfer:	Spray Transfer	Shielding Gas:	N/A
		Process Mode:	Automatic	Gas Flow:	NA ft3/h
		Tungsten Type:		Tungsten Dia.:	NA in

Cleaning:	Wire brush and remove slag in between passes	PHT Temp:	15°C or 59 °F
		PWHT Temp:	NA °F

Typical Joint Details:

Typical Pass & Layer Sequence:

Joint Configuration:		**Joint Details:**		**Technique & Process Information:**		
Joint Type:	Butt	G = 3/32	⍉ (°) = 0	Electrical Stickout:	1 1/2 ± 1/4	in
Weld Type:	Complete Joint Penetration	R_F = 0		Nozzle Diameter:	3/4	in
Backgouging:	Backgouged to Sound Metal			Average Deposition Rate:	11.1	lbs/h

Welding Parameters:

Mosher ENGINEERING

WELDING PROCEDURE DATA SHEET

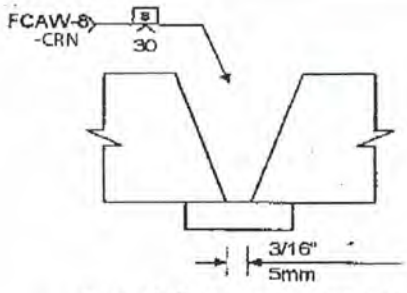
No.: **FCAW-8-CVN**

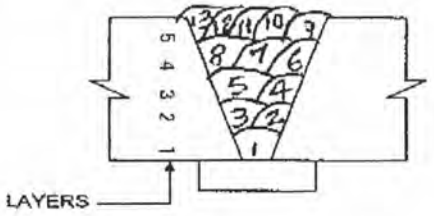
Date: Febuary 10, 2009



Company Name:	Mosher Engineering			Wldg. Specification No:	RTR-4
Address:	1358 Queen Street			Reference WPQR:	
	Halifax	Nova Scotia	B3J 2H5	Ref. Standards:	CSA W47.1, W59 & W48

Material Information:

Position:	Flat	Welding Process:	FCAW	Consumable:	E491T-12MJ-H4	
Base Mat'l:	CAN G40.21 350WT Cat. 5 (27J @-40°C)	Mode of Transfer:	Globular Transfer	Shielding Gas:	75% Ar 25% CO2	
		Process Mode:	Semi-Automatic	Gas Flow:	45	ft3/h
		Tungsten Type:		Tungsten Dia.:		in



Cleaning:	Wire brush and remove slag in between passes	PHT Temp:	15°C or 59 °F
		PWHT Temp:	N/A °F

Typical Joint Details:

Sketch Of Typical Joint Preperation

Typical Pass & Layer Sequence:

Typical Pass and Layer Sequence

Joint Configuration:		**Joint Details:**		**Technique & Process Information:**			
Joint Type:	Butt	G = 3/16"	Q (°) =	Electrical Stickout:	3/4	± 1/8	in
Weld Type:	Complete Joint Penetration	R_F =		Nozzle Diameter:	1/2		in
Backgouging:	N/A			Average Deposition Rate:	7.0		lbs/h

Welding Parameters:

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
GENERAL NOTES		REGISTERED PROFESSIONAL ENGINEER N. T. ROSE SIGNATURE 02/03/28 PROVINCE OF NOVA SCOTIA

1. General Notes

1.1 The Welding Standards of this firm are prepared in accordance with CSA Standard W47.1 - 1992. All welding will be performed in conformance with CSA Standard W59 - M1989, and to any revisions to the above mentioned Codes.

1.2 All welding operators employed will be qualified in accordance with CSA W47.1 and will be allowed to weld only the classifications (T and S), and positions for which they are qualified. They shall use only those welding processes and electrode classifications for which they are qualified.

1.3 Any welding sub-contracted by this form will be sublet only to firms approved and certified to CSA W47.1 - 1992 by the Canadian Welding Bureau. Drawings and welding procedures will be issued to the above sub-contractor so that welding quality is insured. (The subcontractor's CWB approved welding procedure may be used if satisfactory to the prime contractor.)

1.4 Changes in welding methods or welding engineering standards and additions to joints welded will be submitted to CWB for approval in accordance with Clause 6.4 of CSA Standard 47.1 before being used in production.

1.5 Only electrodes approved under CSA electrode standard or those conditionally approved under CSA Standard W47.1 shall be used. Each welding procedure data sheet will designate the electrode(s) to be used for the joint, the applicable codes and the number of the welding procedure specification which governs the data sheet application.

1.6 The individual data sheets will show the material specification(s) which may be welded.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
GENERAL NOTES		REGISTERED PROFESSIONAL ENGINEER · PROVINCE OF NOVA SCOTIA · R. T. ROSE SIGNATURE 02/03/28

1.7 Unless called for otherwise on a specific data sheet, vertical welds shall be made with progression of each pass in an upward direction.

1.8 All slag or flux remaining on any bead of welding shall be removed before laying down the next successive bead. Similarily with any new cracks, blow holes or porosity.

1.9 Metal surface to be welded shall be dry, clean and free from loose scale, paint and grease.

1.10 Specially designed anti- spatter compounds shall be used where called for on shop drawings.

1.11 No welding shall be done when temperature of the base metal is lower than -18 C (0 F) except with the express consent of the engineer. At temperatures below 0 C (32 F) the surfaces of all areas within 75mm (3") of the joint where a weld is to be deposited, shall be heated to a temperature at least warm to the hand before welding is commenced.

1.12 The operator and the work shall be adequately protected against the direct effect of wind, snow and rain.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
2.a WELDING SYMBOLS AND BASIC JOINTS		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/28 · PROVINCE OF NOVA SCOTIA ·

1. Welding symbols shall be as shown in AWS Standard A2.4, Symbols for Welding and Nondestructive Testing. See Appendix D of CSAW59-M1989 for symbols from that Standard and additional conventions developed for incorporation into this Standard. Special requirements shall be fully explained by notes or details.

Detail of butt joints, corner joints, T-joints, lap joints and edge joints are shown in Appendix D, CSA W59-M1989. Standard location on elements of a welding symbol are also shown in this appendix.

2.c CLARIFICATION OF INTERMITTENT AND STAGGERED FILLET WELDS

CHAIN INTERMITTENT FILLET WELD

STAGGERED INTERMITTENT FILLET WELD

Note:

(a) When intermittent fillet welding is used by itself, the symbol indicates that increments shall be located at the ends of the dimensioned length.

(b) If required by actual length of the joint the length of increment of the welds at the end of the joint should be increased to terminate the weld at the end of the joint.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
2.d GENERAL DRAFTING AND DESIGN INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/28 · PROVINCE OF NOVA SCOTIA ·

(1) Welds on both sides of the joint shall be shown by placing weld symbols on both sides of the reference line. The size of a fillet weld or groove weld (Depth unless it is complete joint penetration) shall be shown to the left of the weld symbol.

The length of a fillet or groove weld, when indicated on the welding symbol, shall be shown to the right of the weld symbol. Unless otherwise indicated on the welding symbol all welds shall be continous.

When no general note governing the dimensions of fillet welds or groove welds appears on the drawing the dimensions of fillet welds and groove welds on both sides of the joint shall be shown as follows.

(a) When both welds have the same dimensions, both shall be dimensioned.

(b) When the welds differ in dimensions, both shall be dimensioned.

(2) Symbols apply between abrupt changes in the direction of the welding or to the extent of hatching or dimension lines. Weld extending beyond abrupt changes in the direction of the welding shall be indicated by means of additional arrow points to each section of the joint to be welded. The above applies except when the weld all around symbol is used.

(3) When desired, General Notes, may be placed on a drawing to provide detailed information pertaining to predominant welds.

i.e. Unless otherwise indicated all fillet welds are 8mm (5/16") in size.

Such information need not be repeated on the symbol.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
2.d GENERAL DRAFTING AND DESIGN INFORMATION		REGISTERED PROFESSIONAL ENGINEER R. T. ROSE SIGNATURE 02/03/29 PROVINCE OF NOVA SCOTIA

(4) When only one member of a joint is to be prepared the arrow shall point with a definite break toward that member.

(5) All welds to be called up in Imperial Units unless drawing is designated as a metric drawing in which case all welds will be in Metric Units.

(6) The following finishing symbols, indicate the method, not the degree, of finish required for a weld.

C - Chipping

R - Rolling

G - Grinding

H - Hammering

M - Matching

The above does not include for normal cleaning which is always required after each weld pass.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE · 02/03/28 · PROVINCE OF NOVA SCOTIA ·

3.a Fillet Welds

1. The effective area of a fillet weld shall be the effective weld length multiplied by the effective throat thickness.

2. The effective length of a fillet weld shall be the overall length of the full-size fillet, including end returns. No reduction in effective length shall be made for either the start or termination of the weld if the weld is full size throughout its length.

3. The effective length of a curved fillet weld shall be measured along the centreline of the effective throat.

4. The effective throat thickness shall be the shortest distance from the root to the face of the diagrammatic weld for all processes except SAW which will be governed by CSA W59-4.3.2.4.

5. Fillet welds may be used in skewed T-joints having a dihedral angle of not less than 60 degrees nor more than 120 degrees as shown in figure 4-2 and clause 4.3.2.5 of CSA W59-M1989

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE · 02/03/28 · PROVINCE OF NOVA SCOTIA ·

3.A Fillet Welds

4. The maximum fillet weld size permitted along the edge of material shall be:

   (a) The thickness of the material for material less than 6mm (1/4") thick.

   (b) 2mm(1/16") less than the thickness of material for 6mm (1/4") or more in thickness unless the weld is designated on the detail drawing to be built out to obtain full throat thickness.

   (c) The size of fillet welds on top of groove welds when required by the engineer for smoother transiton in "T" and corner joints shall not be less that t/4 where it is the thickness of the groove welded member, but need not to be more than 10mm (3/8"). They shall be mandatory for T-Joint subject to tension normal to the axis of the weld.

5. The minimum effective length of a fillet weld shall be 40mm (1 1/2") or 4 times the size of the fillet whichever is larger.

6. Fillet welds may be continous or intermittent except for CSA W59-12.4.14. 1.d which notes restriction on the use of intermittent welds in dynamically loaded structures.

7. The minimum overlap of parts in stress carrying lap joints shall be 5 times the thickness of the thinner part joined. Unless lateral deflection of the parts is prevented, they shall be connected by two transverse lines of fillet, or by longitudinal fillet welds along the edges or in slots.

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/20 · PROVINCE OF NOVA SCOTIA ·

3.A Fillet Welds

8. Fillet welds shall not terminate at corners of parts of members but shall be returned continously, full size around the corner for a length equal to twice the weld size where such return can be made in the same plane.

9. The minimum fillet size as measured shall be shown in the table below (Table 3-1). Except that the weld size need not exceed the thickness of the thinner part joined unless a larger size is required by calculated stress. For this exception particular care shall be taken to provide sufficient heat input to ensure weld soundness.

When welding attachments to members which do not carry calculated stress, the requirements of the table below need not apply.

TABLE 3-1 MINIMUM FILLET SIZE

MATERIAL THICKNESS OF THICKER PART JOINED IN MILLIMETERS (INCHES)	MINIMUM SIZE OF FILLET WELD IN MILLIMETERS (INCHES)	
To 12mm (1/2") Inclusive	5mm (3/16")	Single Pass welds Must be used
Over 12mm (1/2") to 20mm (3/4")	6mm (1/4")	
Over 20mm (3/4")	8mm (5/16")	

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE 02/03/28 · PROVINCE OF NOVA SCOTIA ·

3.b Groove Welds

1. A complete penetration groove weld is defined as one made from one side on a backing bar or on both sides combined with back gouging to provide complete penetration and fusion of weld and base metal throughout the depth of the joint.

2. The effective area of a groove weld shall be the effective weld length multiplied by the efective throat thickness.

3. The effective throat thickness of a complete joint penetration groove weld shall be the thickness of the thinner part joined. (No increase is permitted for weld reinforcement.).

4. The minimum groove depth of single partial joint penetration groove welds or on each side of double partial joint penetration groove welds shall be in accordance with the Table 3.2 on page 12.

5. For details of Plug and Slot Welds refer to section 4.4.2 of CSA W59-M1989

6. For details of Flare Grooves and their effective throats refer to Section 4.3.1.6 of CSA W59-M1989

3 SUPPLEMENTARY WELD INFORMATION

MINIMUM GROOVE DEPTH FOR PARTIAL JOINT PENETRATION GROOVE WELDS (NOT COMBINED WITH FILLET WELDS) TABLE 3-2

THICKNESS OF THICKER PART JOINED IN MILLIMETERS	MINIMUM GROOVE DEPTH	
	Groove Angle At Root > 45 < 60 (V, Bevel Grooves)	Groove Angle At Root > 60 (V, bevel J-,U-Grooves)
To 12mm (1/2") Inclusive	8mm (5/16")	5mm (3/16")
Over 12mm (1/2") to 20mm (3/4") Inclusive	10mm (3/8")	6mm (1/4")
Over 20mm (3/4") to 40mm (1 1/2") Inclusive	12mm (1/2")	8mm (5/16")
Over 40mm (1 1/2") to 60mm (2 1/4") Inclusive	14mm (9/16")	10mm (3/8")
Over 60mm (2 1/4") Inclusive	16mm (5/8")	12mm (1/2")

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
3 SUPPLEMENTARY WELD INFORMATION		REGISTERED PROFESSIONAL ENGINEER · PROVINCE OF NOVA SCOTIA · R. T. ROSE SIGNATURE 02/03/28

3.b Groove Welds

5. The effective throat thickness of a partial joint penetration groove weld for joints with no root openingshall be the depth of camfer less 3mm (1/8") for grooves having an included angle at the root of the groove less than 60 but not less than 45 .

6. The effective throat thickness of a partial joint penetration groove weld shall be the depth of camfer for grooves having an included angle at the root of the groove of 60 or greater.

7. The effective throat thickness of a partial joint penetration groove weld reinforced with a fillet weld shall be the shortest distance between the root of the groove and the surface of the fillet less 3mm (1/8") where such reduction is required by Paragraph (5).

8. For hollow structural sections the effective throat thickness of Flare-V and Flare-Bevel Groove welds shall be established by the contractor. Unless otherwise approved by the engineer, this shall be done by means of trial welds for each set of procedural conditions shall then be sectioned and measured to establish welding techniques which will ensure that the design throat thickness is achieved in production.

4 SHOP STANDARDS

4.a Acceptable and Unacceptable Weld Profiles

TABLE - 1

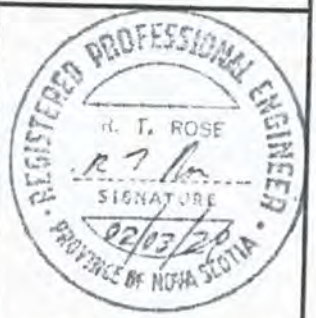
Notes:

(1) *The faces of fillet welds may be slightly convex, flat, or slightly concave. Except at outside corner joints, the convexity shall not exceed 0.07 x width of face or bead + 1.5 mm.*

(2) *The finishing passes of all groove welds in butt joints shall provide a reinforcement at the centre of weld not exceeding 3 mm. The reinforcement shall be built up uniformly from the surface of the parent metal to a maximum at the centre of the weld. There shall be no valley or groove along the edge or in the centre of the weld. The deposited metal shall be smooth and uniform in cross-section.*

4 SHOP STANDARDS

4.b Splicing



1. Connections or splices in beams or girders when made by groove welds shall be complete penetration groove welds, unless otherwise approved by the Engineer.

2. Splices of tension members made by groove welds shall be complete joint penetration groove welds unless otherwise approved by the Engineer.

3. All shop splices in each component of a cover-plated or built-up member shall be made before such component part is welded to other component parts of the member.

4. Tension butt joints in plates of different material thickness or widths shall be made in such a manner that the slope through the transistion zone is not steeper thatn 1 in 2 1/2. The transisiton shall be accomplished by chamfering the thicker part, tapering the wider part, slopeing the weld metal, or by any combination of these.

5. Compression butt joints do not require a transistion zone in members of different thickness or width, if approved by the Engineer.

4 SHOP STANDARDS

4.c Preparation of Material (From CSA W59-M1989 Clause 5.3)

1. Surfaces and edges to be welded shall be smooth, uniform and free from fins, cracks and other defects that would adversely affect the quality or strength of the weld. Surfaces to be welded shall also be free, within 50 mm (2") of any weld locations, from loose or thick scale (except for tightly adhering small islands of scale), slag, loose rust, paint, grease, moisture and other foreign material that will prevent welding to meet acceptance levels of this standard or produce objectionable fumes.

2. Preparation of edges for welding shall be smooth and regular and shall be left free of slag. The edges resulting from cutting shall be smoothed when necessary to provide a surface equivalent to that specified in Clause 5.3 (CSA W59) (Pre-ceding paragraph). All re-entrant corners shall be shaped, notch-free, to a radius of at least 15mm. All cutting shall follow closely the lines prescribed. Oxygen gouging not to be used on quenched and tempered steels.

3. For reference to occassional notches and their repair see Clause 5.3.2 CSA W59-M1989 and for planar edge discontinuities refer to Clause 5.3.3 CSA W59-M1989

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
4 SHOP STANDARDS		REGISTERED PROFESSIONAL ENGINEER · R. T. ROSE · SIGNATURE · 02/03/28 · PROVINCE OF NOVA SCOTIA ·

4.d Assembly Practices

1. The parts to be joined by fillet welds shall be brought into as close contact as practicable, (see Clause 54.1 of CSA W59-M1989) and in no event shall be separated by more than 5mm (3/16"). If the separation is 1mm (1/32") or greater, the size of the fillet weld shall be increased by the amount of the separation. The separation between faying surfaces of lap joints and of butt joints landing on a backing shall not exceed 2mm (1/16"). Where irregularities in rolled shapes or plates after straightening, do not permit contact within the above limits, the procedure necessary to bring the material within these limits shall be subject to the approval of the Engineer. The use of fillers is prohibited except as specified on the drawings or as specially approved by the Engineer, and made in accordance with Clause 4.5 CSA W59-M1989.

   Abutting parts to be joined by groove welds shall be carefully aligned. Where the parts are effectively restrained against bending due to eccentricity in alignment, an offset not exceeding 10% of the thickness of the thinner part joined, but in no case more than 3mm (1/8"), may be permitted as a departure from the theoretical alignment. In correcting misalignment in such cases, the parts shall not be drawn into a greater slope than 1 in 25. Measurement of offset shall be based upon midplane of parts unless otherwise shown on the drawings.

Members to be welded shall be brought into correct alignment and held safely in position until welding has been completed. Suitable allowances shall be made for warpage and shrinkage.

4 SHOP STANDARDS

4.e Allowable Workmanship Tolerances from Detailed Drawings

Dimensions of the cross-section of groove welded joints which vary from those on the detail drawings by more than the following workmanship tolerances shall be corrected as per Appendix C, Clause C1.1 (f) (CSA W59), or referred to the Engineer for approval.

	Root Not Gouged	Root Gouged
a) Root Face of Joint	+/- 2mm (1/16")	Not limited
b) Root Opening of Joints without steel backing	+/- 2mm (1/16")	+ 2mm (1/16") - 3mm (1/8")
Root Opening of Joints with steel backing	+ 6mm (1/4") - 2mm (1/16")	Not applicable Not applicable
Root openings wider than permitted by the above tolerances but not greater than twice the thickness of the thinner part of 20mm maximum be built up be welding to acceptable dimensions prior to the joining if the parts by welding.		
c) Groove angle of Joint	+10 Degrees - 5 degrees	+10 Degrees - 5 degrees

4 SHOP STANDARDS

4.f Control of Distortion and Shrinkage Stresses

1. Insofar as practicable, all welds shall be deposited in a sequence that will balance the applied heat of welding while the welding progresses.

   Before the start of welding on a member or structure in which shrinkage stresses or distortion is likely to effect the adequacy of the structure, the program for welding sequence and distortion control shall be developed by the Contractor and submitted to the Engineer for approval.

   The direction of the general progression in welding on a member shall be from points where the parts are relatively fixed in position with respect to each other toward points where they have a greater relative freedom of movement.

   Joints expected to have large shrinkage shall normally be welded before joints expected to have lesser shrinkage and with as little restraint as possible.

   All shop splices in each component of a coverplated or built-up member shall be made before such component part is welded to other component parts of the member. With the approval of the Engineer, long girders or girder section may be made by shop splicing sub-sections, each made in accordance with this Clause (Clause 5.4, CSA W59 - M1989).

   For conditions of severe external shrinkage restraint refer to clause 5.1.7 (CSA W59-M1989).

WELDING STANDARDS to CSA W47.1	CWB APPROVAL	ENGINEERS STAMP
4 SHOP STANDARDS		REGISTERED PROFESSIONAL ENGINEER R. T. ROSE SIGNATURE 02/03/28 PROVINCE OF NOVA SCOTIA

4.g Quality of Welds

1. Welds shall have no cracks

2. Welds shall be free from overlap

3. Undercut shall not exceed the permissable valves as given in Clauses 11.5.4 and 12.5.4 of CSA W59-M1989 for statically and Dynamically Loaded structures respectively.

4. The minimum acceptable quality of welds, including visual examination, shall confirm to clause 11.5.4 for Statically Loaded Structures, and Clause 12.5.4 for Dynamically Loaded Structures.

N° équip./Equip. no : UT-Q-34 **Palpeur/Transducer :** 0 degre and 70 degre

RÉSULTATS/RESULTS :

Ultrasonic inspection was performed:

- On every T (where vertical weld and horizontal touch each other) between first/second, second/third & third/forth course: **Accepted**
- On every vertical first course from 1" to 7 and 53" to 59": **Accepted**
- On horizontal UT on two locations, placed at center over each manhole 6" long: **Accepted**

Magnetic particles inspection was performed on angle joint between the shell and nozzle & bottom weld to shell inside and outside the tank:

- -**Inside tank,** weld shell/nozzle and shell to the bottom weld at 100%: **Accepted**
- -**Outside tank**, weld between shell/pad, and weld pad/nozzle, and on weld shell to bottom weld at 100%: **Accepted**

Remark: 12 nozzles including 2 manholes; one nozzle outside does not have pad. Please refer to drawing 295-M13; part section J-J item #35. This nozzle corresponds to a ¾" coupling for a water temperature gauge in the shell and the client has advised that no repad is needed for this specific coupling.

APPAREIL/EQUIPMENT :

Instrument : USM GO+ **Couplant :** Echogel **Échelle/Sweep length :** 0'' to 2 ''

N° équip./Equip. no : UT-Q-34 **Palpeur/Transducer :** 0 degre and 70 degre

RÉSULTATS/RESULTS :

Ultrasonic inspection was performed:

- On every T (where vertical weld and horizontal touch each other) between first/second, second/third & third/forth course: **Accepted**
- On every vertical first course from 1" to 7 and 53" to 59": **Accepted**
- On horizontal UT on two locations, placed at center over each manhole 6" long: **Accepted**

Magnetic particles inspection was performed on angle joint between the shell and nozzle & bottom weld to shell inside and outside the tank:

- -**Inside tank,** weld shell/nozzle and shell to the bottom weld at 100%: **Accepted**
- -**Outside tank**, weld between shell/pad, and weld pad/nozzle, and on weld shell to bottom weld at 100%: **Accepted**

Remark: 12 nozzles including 2 manholes; one nozzle outside does not have pad. Please refer to drawing 295-M13; part section J-J item #35. This nozzle corresponds to a ¾" coupling for a water temperature gauge in the shell and the client has advised that no repad is needed for this specific coupling.

APPAREIL/EQUIPMENT :

Instrument : USM GO+ **Couplant :** Echogel **Échelle/Sweep length :** 0'' to 2 ''

N° équip./Equip. no : UT-Q-34 **Palpeur/Transducer :** 0 degre and 70 degre

RÉSULTATS/RESULTS :

Ultrasonic inspection was performed:

- On every T (where vertical weld and horizontal touch each other) between first/second, second/third & third/forth course: **Accepted**
- On every vertical first course from 1" to 7 and 53" to 59": **Accepted**
- On horizontal UT on two locations, placed at center over each manhole 6" long: **Accepted**

Magnetic particles inspection was performed on angle joint between the shell and nozzle & bottom weld to shell inside and outside the tank:

- -**Inside tank,** weld shell/nozzle and shell to the bottom weld at 100%: **Accepted**
- -**Outside tank**, weld between shell/pad, and weld pad/nozzle, and on weld shell to bottom weld at 100%: **Accepted**

Remark: 12 nozzles including 2 manholes; one nozzle outside does not have pad. Please refer to drawing 295-M13; part section J-J item #35. This nozzle corresponds to a ¾" coupling for a water temperature gauge in the shell and the client has advised that no repad is needed for this specific coupling.

ICL Project No.: 295 Tank No.: 5 Client: AEM Site: Portal #1

Punch List

Initial When Complete

Description	To be Completed By	ICL	Client
Weld stairway and platform handrails together to eliminate pinch points	ICL	SB	
Reduce gap in opening of roof railing at stairway top railing. Do this by adding vertical picket and horizontal handrails and kick plate	ICL	SB	

MANUFACTURER'S CERTIFICATION FOR A TANK BUILT TO API STANDARD 650

To **AGNICO EAGLE MINES LIMITED**

(name and address of Purchaser)

145 KING STREET EAST, SUITE 400, TORONTO, ONTARIO M5C 2Y7

We hereby certify that the tank constructed for you at

(location)

RANKIN INLET, NUNAVUT - MELIADINE FIELD ERECTED TANKS PROJECT

and described as follows: **TANK NO. 5, 8.2 M DIA X 4.75 M HIGH, 250 M3, FIXED CONE ROOF**

(serial or contract number, diameter, height, capacity, floating or fixed roof)

AEM PO: OC-568510

meets all applicable requirements of API Standard 650, **12th** Edition, **Addendum 2** Revision, Appendix

_____ dated **JAN 2016** including the requirements for design, materials, fabrication, and erection.

NOTE: TANK STRAPPED AND COMPUTED IN ACCORDANCE WITH API STANDARD MPMS CHAPTER 2.2C.

NOTE: CAPACITY TABLE REFLECTS AN OPERATING TEMPERATURE OF 60 DEGREES F.

NOTE: LIQUID HEAD STRESS HAS BEEN APPLIED TO CAPACITY TABLE AT SPECIFIC GRAVITY 0.8500.

NOTE: A 8.3 CM CONE BOTTOM HAS BEEN APPLIED BELOW 5 CM

NOTE: NOMINAL TANK DIAMETER = 8.20 M SHELL HEIGHT = 4.756 M

DATE STRAPPED: 09/19/17 BY: RJ

DATE COMPUTED: 09/26/17 BY: WLH

DATE ISSUED: 09/26/17

APPENDIX J

Construction Summary of Mine Site Fuel Storage and Containment Facilities

Civil Earthworks Construction Summary – Mine Site Tank Farm

- Construction management and quality assurance performed by Agnico Eagle Construction
- Primary civil construction contractor was MTKSL
- Subcontractors: Texel Geosol for liner installation and liner QC
- All survey conducted by Hamel Arpentage

1. **Site Preparation (June)**

- OG surveyed of tank farm footprint

2. **Under Liner Material Placement (June 5 to July 17)**

- Due to the location of the Tank Farm being outside the CP1 containment area, rockfill for all under liner and the service area was sourced from "clean" sources:
    - 600 mm minus (tank containment area) was obtained from the remnants of the Temporary Water Treatment Pad and access road (previously placed in 2016 and therefore subject to multiple flushings) and Portal 2 drill/blast operations for the initial surface open cut
    - 600 mm minus (service area) was obtained from Meliadine Esker
    - 200 mm minus sourced from material crushed winter 2016 (and therefore subject to multiple flushings)
    - 30 mm minus under liner was sourced from processed esker material (Mel. Esker)

3. **Liner System Installation (July 18 to October 12)**

- Textured 60 mil HDPE installed throughout and 540 g/m2 geotextile
- Liner was first placed under the tank pedestal footprints (July 18), the two tanks were erected, then liner installation proceeded throughout the remainder of the containment area (October 1, October 9 to 12)
- Liner under the tank pedestals was initially placed with no allowance for the ditch between the two tanks – this necessitated cutting of the liner between the tanks, excavation of the ditch area, and re-welding of the liner in this location after tank construction
- Liner on the tank pedestals was protected with plywood after installation and before the remaining liner was installed
- Liner installation QA was carried out by AEM and quality control testing by Texel

4. **Tank Erection (July 31 to September 13)**

- Civil earthworks within the Tank Farm area were suspended during erection of the tanks

5. **Over Liner Material Placement (July 19 to October 18)**

- Over liner material placement on the tank pedestals (July 19 to July 30) and in the tank containment area (October 2 to October 18) followed the design specification of placement of 30 mm minus placed on geotextile placed on HDPE

Equipment Used for Construction:

- CAT D8 Bulldozer
- CAT D6 Bulldozer
- CAT 330L Excavator
- CAT 345B Excavator
- CAT 320 Excavator
- CAT 980 Loader
- CAT IT62
- CAT skid steers
- CAT 773 haul trucks
- CAT 740 articulated haul trucks
- CAT CS56 10-ton vibratory drum compactor

- HAMM 5-ton vibratory drum compactor
- Various small hand-pushed compactors

QA/QC Summary

1. 600 mm minus, 200 mm minus, 50 mm minus (service area) and 30 mm minus (under liner) was placed according to the Technical Specifications for Civil Earthworks Revision 3 (6515-GNS-014, June 6, 2017). Compaction efforts consisted of a minimum number of passes with either a 10-tonne vibratory compactor (4 passes) or a 5-tonne vibratory compactor (6 passes). Suitability for placement and compaction efforts were assessed visually and approved by AEM.
2. Particle size analysis was conducted on the 30 mm minus produced from both the ROM and esker sources (results attached). The 30 mm minus material produced from the esker was within the specifications on average, while the 30 mm minus produced from ROM was generally slightly lower than specified for particles of 5 mm (37% tested versus 45% minimum specified)
3. Texel Geosol was responsible for all quality control of the liner installation process.

1. INTRODUCTION

The following report was prepared by Texel Geosol, for Nuna Kivalliq Earthworks Inc.

This report contains a description as well as a certification of all work conducted by Texel Geosol, installer of the geosynthetics. It also contains the record drawing of the geomembrane installation for the Meliadine Industrial Pad Fuel Farm. All installation work conducted on the geosynthetics took place between July and October, 2017.

2. HUMAN RESOURCES

The following list identifies the key personnel involved with the physical realization of this project

TEXEL GEOSOL INC. (Geosynthetic Installer)

- Mr. François Thivierge, Construction and project Manager
- Mr. Jacques St-Gelais, Operation Manager
- Mr. Eric Black, Simon Jodoin, Site Foreman
- Mr. Michael Gilbert, Field QC Inspector and technician
- Mr. Kléber Nault, David Beaulieu, Simon-Carl Marcoux, Olivier Belval and Phillipe Allie, Technicians

NUNA KIVALLIQ EARTHWORKS INC (General Contractor - Client)

- Mr. Matt Gallant, Project Manager

AGNICO EAGLE CONSTRUCTION (Quality Assurance)

3. GEOMEMBRANE INSTALLATION

This section includes a description of the work and the installation procedures used during the deployment of the geomembrane. Also, the construction quality control procedures are detailed in this section

3.1. Description of the work

The scope of the installation was to completely cover the Meliadine industrial pad fuel farm with a geosynthetic lining system. Texel Geosol installed approximately 3682 sm of 60 mil HDPE textured geomembrane. All the installation, seaming and repair procedures were conducted according to the project plans and specifications, and manufacturer's recommendations.

3.2. Installation Procedures

The geomembrane rolls were later deployed and installed by Texel Geosol as prescribed in the specifications. Panels were placed to minimize seams across the side slope and the tie-in seams. The panels were overlapped about 125 to 150 mm, allowing adequate double fusion welding and leaving enough material to perform peel and shear tests on seam samples (see section 3.3.2.1 for a description of these tests).

All seams between panels were made using an automated polymer fusion process, the fusion being obtained through a double hot wedge. These parallel welds create an air channel which allow air-pressure testing of the continuity of the seam (see Fig. 1).

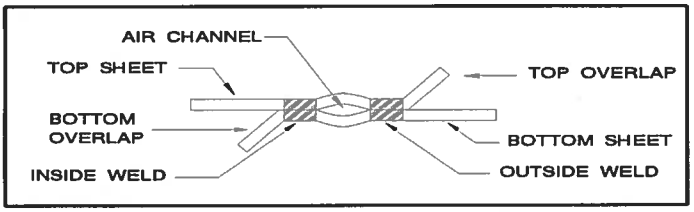

***Figure 1* - Double -Track Geomembrane Weld**

In restrictive areas where this process could not be adequately applied, such as corners, repair work and pipe penetrations, a manual extrusion fillet welding was employed (see Fig. 2).

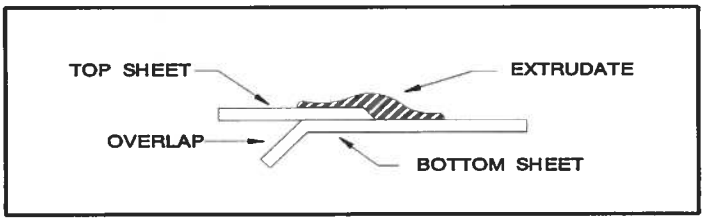

***Figure 2* - Fillet-Extruded Geomembrane Weld**

3.3. Geomembrane quality control

3.3.1. On-site geomembrane installation

3.3.1.1 Welding trial tests

Trial tests were performed prior to any on-site seaming in order to quantify the calibration of the welding equipment. On each sample, four peel tests and one shear tests were performed. A peel adhesion test is conducted by submitting a one inch-wide seam specimen to a tensile effort on a calibrated, portable tensiometer and trying to "peel", or open the seam (see Fig. 3). A shear strength test is similar, but the tension is applied in the plane of the seam (see Fig. 4). The peel test gives an indication of the quality of the seam while the shear test demonstrates the actual behavior of the seam in service.

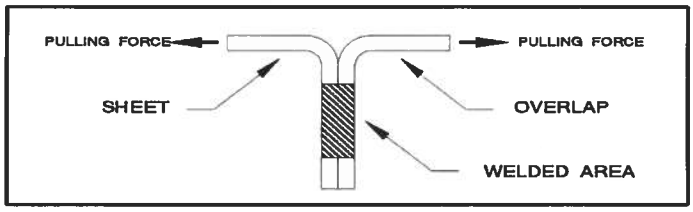

Figure 3 **- Peel Adhesion Test**

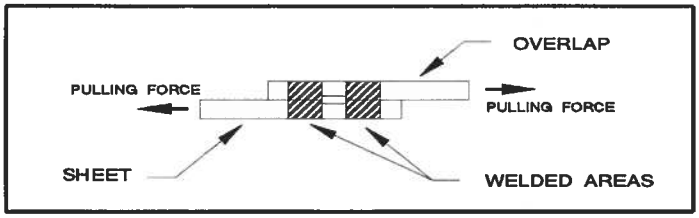

Figure 4 **- Shear Strength Test**

For each trial test, the QC Inspector recorded the date, time, ambient and operating temperatures, equipment number, speed setting, operator's initials, peel and shear values and corresponding type of break. The only type of break acceptable is designated as "FTB", as per the US-EPA classification for types of breaks, available in appendix III. The seams were made only after a satisfactory trial test had been obtained. All the results of these tests are also included in appendix I.

3.3.1.2 On-site non-destructive testing

The continuity of all seams (100%) was verified by non-destructive methods. These methods include the air-pressure test and the vacuum-box test. Any seam that failed one of these tests was rebuilt or repaired until a satisfactory result was obtained. All the results of these tests are included in Appendix I of this report.

a) Air-Pressure Testing

Air-pressure testing was employed as the primary test method. This non-destructive test method consists of injecting air at a predetermined pressure in the center air channel of fusion-welded seams (see Fig. 5). If the seam is continuous there will be very little or no drop of pressure. If a leak is present within the area under pressure, it is located and repaired. This type of non-destructive test is faster than the vacuum-box test, less observer-dependent and represents a supplementary mechanical resistance test since the geomembrane sheets are pulled away from each other by the air pressure in the channel.

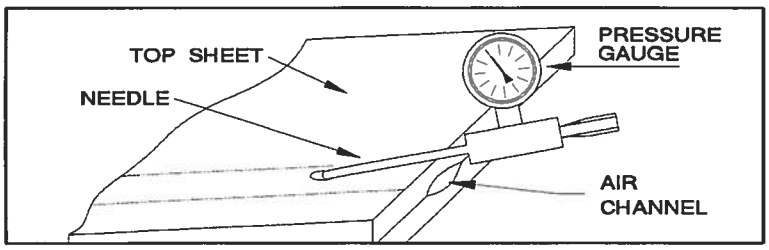

Figure 5 **- Air-Pressure Test**

b) Vacuum-box test

Wherever the air-pressure test could not be used, the vacuum-box test was employed. In this test, a film of soapy water is sprinkled over the area to be tested. A box fitted with a transparent upper cover and a neoprene lower rim is placed over that same area and connected to a vacuum pump; a negative pressure of 5 psi is then applied (see Fig. 6). If there is a puncture or discontinuous seam within this area, bubbles will appear and be detected by the observer.

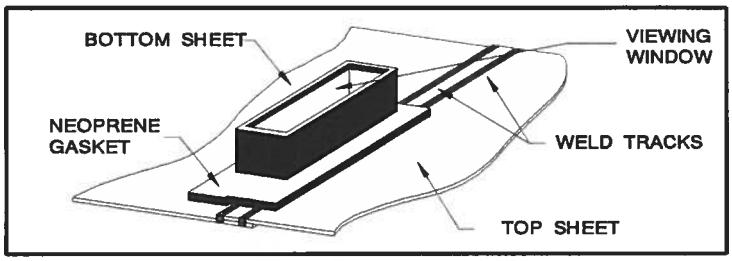

***Figure 6* - Vacuum-Box Test**

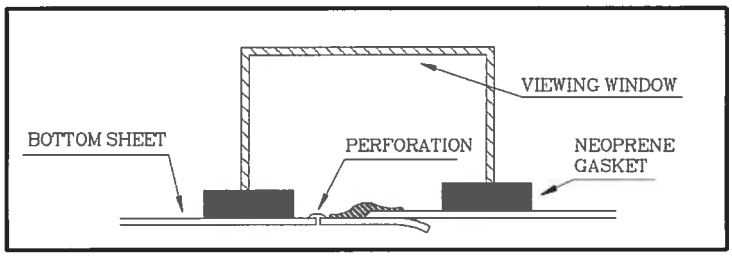

***Figure 7* - Vacuum-Box Test**

3.3.1.3 On-site destructive tests

Finally, a destructive testing program was applied, where seam samples taken from the installed geomembrane were tested for peel adhesion and shear strength on a calibrated, portable tensiometer. On each sample, four peel tests and one shear tests were performed. All the results from these tests are included in Appendix I of this report.

3.4. Repair Procedures

All materials were visually inspected for blemishes, punctures and other defects or damages that may have occurred during transport or panel placement. Any defect or damage was repaired as per the procedures described in this section.

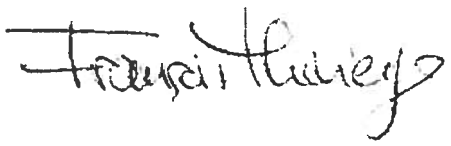
Demobilization was not authorized until Texel Geosol, Nuna Kivalliq Earthworks Inc and Agnico Eagle Construction completed a last visual inspection of the installation work. Any defect revealed by any step of the Quality Control Program was repaired and verified according to the prescribed procedures:

- All pockmarks, pinholes, T-seams, etc., smaller than the tip of the extruder were covered with an extrusion bead;
- All punctures, holes, tears, etc., wider than the tip of the extruder were repaired with extrusion-welded patches;
- Any seam revealed as defective by the CQC or CQA Programs was entirely rebuilt through a fusion and/or extrusion seaming process.

Prior to any fillet extrusion welding, the geomembrane was buffed to insure better adhesion of the extruded material. All repairs were visually inspected and verified by a non-destructive testing method, as described in section 3.3.2.2.

3.5. Record Drawing

The record drawing of the geomembrane installation, showing all panels, panel identification, pipe penetrations, repairs and destructive test locations, is included in Appendix IV of this report.



4. GEOTEXTILE QUALITY CONTROL

Approximately 7364 sm of non-woven geotextile was installed by Texel Geosol according to the project plans and specifications. The geotextile panels were overlapped approximately 100 to 150 mm and thermally bonding (hot air or wedge) or sewing in order to ensure the continuity of the cushion layer.

Any holes or tears in the geotextile were repaired according to the project specifications. All geotextile materials were installed by Texel Geosol.

5. CERTIFICATION

Texel Geosol certifies having installed all geosynthetic materials according to the project plans and specifications provided by the consultant Tetra Tech, for Nuna Kivalliq Earthworks Inc. All installation work conducted by Texel Geosol meets or exceeds the standards of the geosynthetic industry.

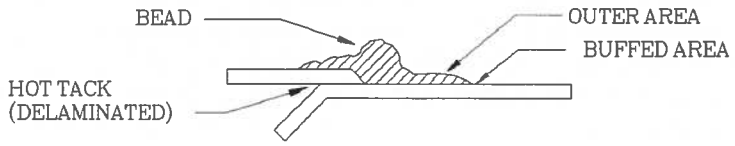
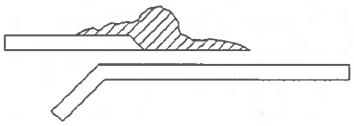
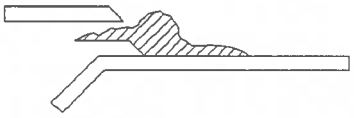
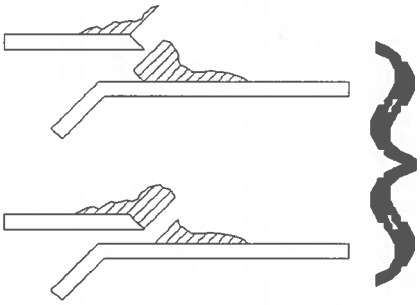
US-EPA CLASSIFICATION FOR TYPES OF BREAK

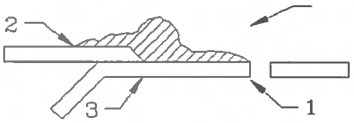


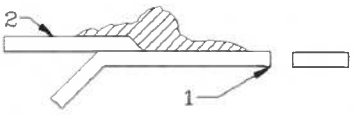
DOUBLE–TRACK GEOMEMBRANE WELD

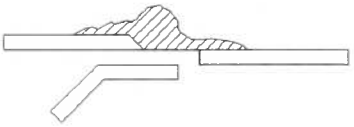


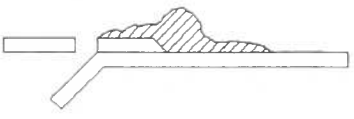








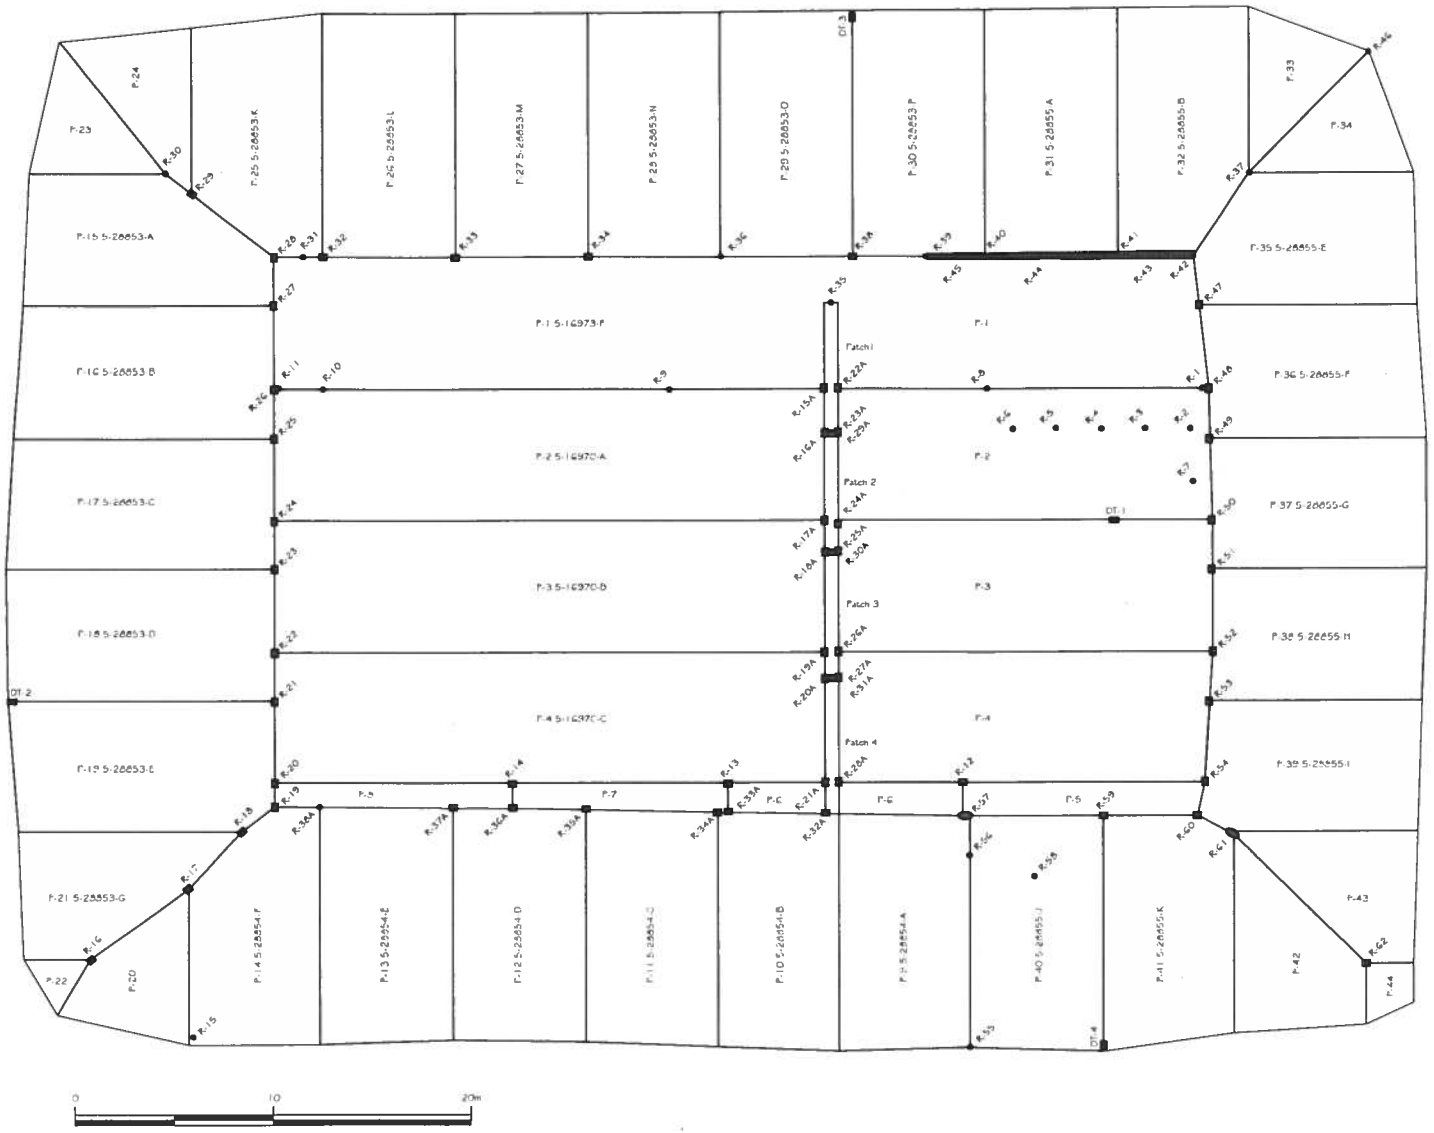




TYPES OF BREAK	CODE	BREAK DESCRIPTION	CLASSI–FICATION [a]
	AD	ADHESION FAILURE	NON–FTB
	BRK	BREAK IN SHEETING. BREAK CAN BE IN EITHER TOP OR BOTTOM SHEET.	FTB
	SE1	BREAK AT OUTHER EDGE OF SEAM. BREAK CAN BE IN EITHER TOP OR BOTTOM SHEET.	FTB
	SE2	BREAK AT INNER EDGE OF SEAM THROUGH BOTH SHEETS	FTB
	AD–BRK	BREAK IN FIRST SEAM AFTER SOME ADHESION FAILURE. BREAK CAN BE IN EITHER THE TOP OR BOTTOM SHEET.	FTB

[a] FTB="FILM–TEAR BOND."

FILLET–EXTRUDED GEOMEMBRANE WELD



TYPES OF BREAKS	CODE	BREAK DESCRIPTION	CLASSIFICATION [a]
	AD1	FAILURE IN ADHESION. SPECIMENS MAY ALSO DELAMINATE UNDER THE BEAD AND BREAK THROUGH THE THIN EXTRUDED MATERIAL IN THE OUTER AREA.	NON–FTB
	AD2	FAILURE IN ADHESION.	NON–FTB
	AD–WLD	BREAK THROUGH THE FILLET. BREAKS THROUGH THE FILLET RANGE FROM BREAKS STARTING AT THE EDGE OF THE TOP SHEET TO BREAKS THROUGH THE FILLET AFTER SOME ADHESION FAILURE BETWEEN THE FILLET AND THE BOTTOM SHEET.	NON–FTB [b]
	SE	BREAK AT SEAM EDGE. INDICATE LOCATION BY 1,2 OR 3	FTB
	BRK	BREAK IN THE SHEET. USE 1 TO INDICATE BOTTOM SHEET AND 2 TO INDICATE TOP SHEET. IF BREAK IS IN BUFFED AREA, INDICATE WITH "(B)".	FTB
	AD–BRK	BREAK IN THE BOTTOM SHEETING AFTER SOME ADHESION FAILURE BETWEEN THE FILLET AND THE BOTTOM SHEET. (APPLICABLE TO PEEL ONLY).	FTB
	HT	BREAK AT THE EDGE OF THE HOT TACK FOR SPECIMENS WHICH COULD NOT BE DELAMINATED IN THE HOT TACK.	NO TEST

[a] FTB="FILM–TEAR BOND."

[b] ACCEPTANCE OF AD–WLD BREAKS MAY DEPEND ON WHETHER TEST VALUES MEET A MINIMUM SPECIFICATION VALUE AND NOT ON CLASSIFICATION AS A FTB OR NON–FTB BREAK.

EXECUTIVE SUMMARY

Tetra Tech was retained by Agnico Eagle Mines Limited (Agnico Eagle) to prepare a construction summary (as-built) report for the Industrial Site Fuel Storage and Containment Facilities at the Meliadine Gold Project, Nunavut. Tetra Tech and WSP Canada Inc. previously prepared the construction drawings and specifications as well as the design report for the Fuel Storage and Containment Facilities for the Project (AEM No 6515-E-132-004-132-REP-003). The facilities include two (2) main fuel storage tanks located at Rankin Inlet Itivia site and four (4) fuel storage tanks located at the Meliadine site.

This report presents the work executed at Meliadine site where the construction of the Industrial Site fuel storage secondary containment and the commissioning of the field erected fuel storage Tank #4 (6ML) and Tank #6 (250kL) was completed in January 2019.

Tetra Tech was not involved in the construction of the Fuel Farm Facilities. The information presented in this report was provided by Agnico Eagle.

The construction monitoring and quality assurance was managed by Agnico Eagle.

1.0 INTRODUCTION

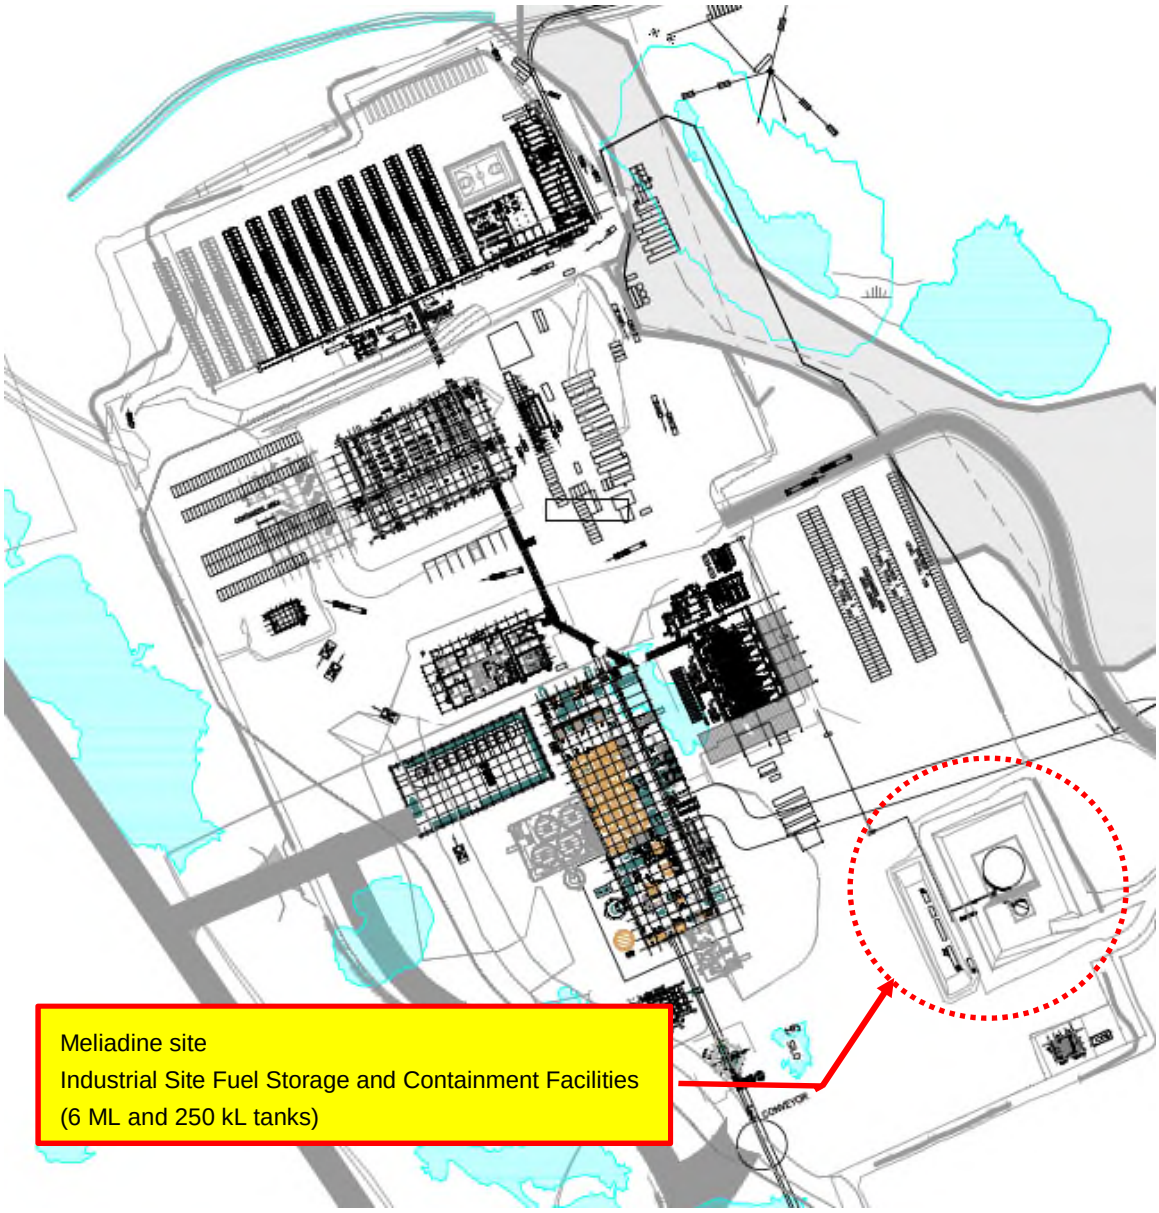
Agnico Eagle Mines Limited (Agnico Eagle) retained the services of Tetra Tech and WSP Canada Inc. to carry out the design works associated with the surface infrastructures for the Meliadine project, a gold mine located approximately 25 km north from Rankin Inlet, and 80 km southwest from Chesterfield Inlet in the Kivalliq Region of Nunavut. These works include the fuel storage and containment facilities for both Rankin Inlet and Meliadine.

Tetra Tech and WSP Canada Inc. previously prepared the design report and drawings for construction related to the fuel storage and containment facilities for the Project including one fuel storage facility at the Rankin Inlet Itivia site and two facilities at the Meliadine site (Industrial Site and Mine Site).

It shoud be noted that the 250 kL tank number was changed from Tank #5 to Tank #6 after the submittal of the design report for the Industrial Site fuel storage and containment facility, and will be refered to as Tank #6 hereafter.

As required by the Water Licence A (No. 2AM-MEL1631), this report summarizes the construction work of the Industrial Site fuel storage and containment facility, including the secondary containment for the fuel farm, pumping station and ancillaries, field erection, and commissioning of Tank #4 (6 ML) and Tank #6 (250 kL). Included in this report is:

- A summary of the characteristics of the Industrial Site fuel storage and containment facility;
- Documentation on field decisions that deviate from original plans;
- As-built drawings;
- Survey drawings conducted during and after the construction;
- Photographs;
- Inspection reports and quality control documents for the offsite and onsite fabrication and fuel modules;
- Inspection reports for the inspection test plan (ITP), and handover packages of Tank #4 and Tank #6;
- Inspection reports for the quality control for geomembrane installation; and
- Particle size summary of 30 mm minus material.



Tetra Tech was retained by Agnico Eagle to prepare a construction summary (as-built) report. Construction summary reports detailing the other fuel storage and containment facilities will be provided under separate covers.

2.0 SUMMARY OF THE CONSTRUCTION

2.1 Site Location Plan

The figure below presents the site location plan for the Industrial Site fuel storage and containment facility and pumping station located on the southeast side of the Industrial Site Pad around a UTM (NAD83, Zone 15) coordinate of 539,364E and 6,989,918N.

Figure 2.1: Site Location Plan

2.2 Construction Schedule

Construction activities at the Industrial Site fuel storage and containment facilities for the commissioning of Tank #4 and Tank #6 were conducted between June 2017 and January 2019. Construction was completed according to the milestone dates shown in Table 2.1.

Table 2.1: Industrial Site Construction Milestone Dates

Item	Date
Site Preparation	June 2017
Under Liner Material Placement	June 9th to September 15th, 2017
Liner System Installation	September 16th to 17th, 2017 and July 14th to 19th, 2018
Tank #4 Erection	May 2018
Tank #6 Erection	May 2018
Overliner Material Placement	September 2017 and July 21st to 29th, 2018
Commissioning of Tank #4 and Tank #6	July 2018
Pumping Station Installation	July 29th 2018
Piping Interrelated to Pumping Station	August 2018
Electrical Construction	October 2018
Industrial Site Facility Testing	August 9th to October 11th, 2018
System Operational for Tank #4 and Tank #6	January 2019

2.3 As-Built Drawings and Photographs

Sealed as-built drawings completed by Tetra Tech are presented in Appendix A.

Survey drawings conducted by Hamel Arpentage during and after the construction of the Industrial Site fuel storage and containment facility can be found in Appendix B.

Photographs of the facilities during and after construction are provided in Appendix C.

3.0 CODES AND STANDARDS

3.1 Compliance for Field Erected Fuel Tanks

The systems comply with all codes and standards related to the project (Federal, Territorial, Municipal, NBCC, NFCC, CEC, CSA, NFPA, and API) as well as the directives of the authorities having jurisdiction over the project, including specific codes such as R-125-95 NWT, Mine Health and Safety Act and RRNWT 1990, C F-12 Fire Prevention Regulations. A summary of the compliance requirements are shown in Table 3.1 below.

Table 3.1: Industrial Site Field Erected Fuel Tanks As-Built Compliance

Fuel Farm Description	Industrial Site Fuel Storage Containment Facilities Compliance	
	Tank #4	Tank #6
Comply with CCME	Yes	Yes
Equipped with Overfill Protection	Yes	Yes
Underground Piping Double Wall	Yes	Yes
Underground Piping Installed to Collect Leak into an Accessible Sump	Yes	Yes
Connections for Filling/Emptying Storage Tanks Kept Close	Yes	Yes
Material	G40.21M-260WT	G40.21M-260WT
Product	Diesel	Diesel
Volume	6 ML	250 kL
Diameter	23.4 m	8.2 m
Height	14.0 m	4.7 m

3.2 Compliance for Secondary Containment

The secondary containment for aboverground storage tanks complies to NFCC standards. The base and walls of the containment basin were constructed to withstand a full hydrostatic head and has a permeability of 1_E^{-13} cm/s while the required permeability is 1_E^{-6} cm/s. The tanks are located entirely within the diked area, with an impermeable membrane covered with a non-combustible material.

Table 3.2: Industrial Site Secondary Containment As-Built Compliance

Parameters	Description		Compliance
Enclosed Tanks	Tank #4	Tank #6	-
Volume	6 ML	250 kL	-
Fuel Farm Secondary Containment Requirement / Actual Containment Capacity (for both tanks)	6 600 m^3 / 6 631 m^3		Yes
Base and Wall Membrane to Withstand Hydrostatic Head	HDPE		Yes
Permeability (1_E^{-6} cm/s min.)	1_E^{-13} cm/s		Yes
Tanks Located Entirely Within the Diked Area	-		Yes

As shown in Table 3.2 above, the actual volume capacity of 6 631 m^3 complies with the legal requirement which states that the minimum required capacity is 110% of the volume of the larger tank for the operation of the fuel farm. The actual versus designed capacity was reduced by 169 m^3 but the actual volume capacity is still greater than the required capacity of 6 600 m^3.

3.3 Distance Restrictions As-Built

The minimum clearances that were required or recommended by the *Design Rationale for Fuel Storage and Distribution Facility* by Public Works and Services of the Government of the Northwest Territories and NFPA-30 were met and are listed on Table 3.3 below:

Table 3.3: Distance Restrictions

Item	Required	Tank #4	Tank #6
Distance Between Tanks	¼ (D4 + D6) = 7.9 m Min. Where D4=23.4 m, D6=8.2 m	9.29 m	
Distance Between Tank and Toe of the Dike	1.50 m Min.	12.72 m	15.01 m
Distance Between Tank and CL of the Dike	½ (Height of Tank) = 7 m / 2.35 m Min. Where H4=14.0 m, H6=4.7 m	17.46 m	20.98 m
Distance Between Property Limit (that can be built upon) and Tank	Tanks with less than 3 000 000 gallons: 165 ft. = 50.29 m Min.	> 698 m	> 712 m
Distance Between Property Limit and Exterior Toe of the Dike	3.0 m Min.	> 550 m	
Distance Between Tank and Public Roads	55 ft. = 16.76 m Min.	≈ 30 km	≈ 30 km

4.0 FIELD DECISIONS FOR THE FIELD ERECTED FUEL TANK #4 AND TANK #6 AND SURROUNDING FACILITIES (MECHANICAL AND ELECTRICAL)

4.1 Documentation on Field Decisions that Deviate from Original Plans

This section documents variations from original design which were approved by the designer and/or the field engineer on site for the field erected fuel tanks and piping systems.

The construction work led to slight variations from the original design in the mechanical and electrical aspects of Tank #4 and Tank #6 of the Industrial Site Fuel Farm. The designed intent of the structure was not compromised with the changes to the original design.

4.1.1 Mechanical

- The loading arm manufacturer was changed from Emco to OPW due to time constraints of the delivery.
- The pumping station container was changed from a 20 feet to a 40 feet container to allow for more room in the pumping station.

4.1.2 Electrical

- One switch per variable speed drive (VSD) was installed per pump. The 600 V power junction boxes were removed, approved by the designer and control cables were installed between cabinets and the VSD.
- Additional exterior lighting and fixtures were installed upon approval by the field engineer. One emergency lighting fixture and one 120 V receptacle in each operator room.
- Installation of fire protection strobe light on both Tank #4 and Tank #6, as well as at the gas boy.
- To avoid adding a resistance temperature detector (RTD) card to the programmable logic controller (PLC), a 4-20 mA signal from all RTD temperature sensor were added.
- A temperature sensor was installed on both Tank #4 and Tank#6.
- An Ethernet cable network connecting the Microload to the PLC will replace the BMXEAE0300 and MBXFTB2000.

4.2 Maintenance, Inspection, Construction Monitoring, and Inspection Reports

The construction monitoring was managed by Agnico Eagle. Several activities were conducted during construction to ensure the quality of the work. Here is a description of the reports prepared to summarize the quality control, monitoring, or inspection performed during the construction of key activities.

- *Offsite and Onsite Fabrication Quality Control Documents* dated January 2019 prepared by Nuqsana Promec Mining, see the handover document in Appendix D. Quality control was done throughout the construction and fabrication of the project, including but not limited to, the catwalk, piping, and mechanical fixtures.
- *Industrial Site Fuel Module Quality Control Documents* dated January 2019 prepared by Nuqsana Promec Mining, see handover document in Appendix E. Documentation for inspection and test plan for mechanical, piping, and also red line are included in this document.
- *As-Built Drawing Binder for Tank #4* dated July 25th, 2018 prepared by Inukshuk Construction Limited, see the handover document in Appendix F. Testing and Inspection Test Plans (ITP) were done throughout the erection of Tank #4 and the installation of the mechanical and electrical systems are included in this document (6515-C-260-002-141-QCR-0010).
- *As-Built Drawing Binder for Tank #6* dated July 25th, 2018 prepared by Inukshuk Construction Limited, see the handover document in Appendix G. Testing and Inspection Test Plans (ITP) were done throughout the erection of Tank #6 and the installation of the mechanical and electrical systems are included in this document (6515-C-260-002-141-QCR-0012).

All of the inspections done during and after the construction of Tank #4 and Tank #6 at the Industrial Site fuel storage containment facility were shown to comply with API standard 650. No leaks were found using diesel and liquid penetration tests, and all welds were deemed acceptable under multiple tests. Table 4.1 below shows the inspections that were done during the fabrication and erection of the tanks as provided in the Handover Packages.

5.0 FIELD DECISIONS FOR THE SECONDARY CONTAINMENT FACILITY

5.1 Documentation on Field Decisions that Deviate from Original Plans

This section documents variations from original design which were approved by the designer and/or the field engineer on site.

A construction summary of the earthworks for the secondary containment facility was prepared by Agnico Eagle and is located in Appendix H.

The Industrial Site fuel storage containment facilities geometry and characteristics were adjusted to site conditions. The designed intent of the structure was not compromised with the changes to the original design. Table 5.1 and the following sections summarize the changes between the proposed and final works.

5.1.1 Dike and Secondary Containment for Fuel Tank Farm

- The dimensions of the dike centerline (CL) to centerline (CL) are lesser by 1.4 m length and 0.1 m width.
- The average dike height and containment height was increased by 0.2 m and 0.08 m to a height of 2.0 m and 1.73 m respectively.
- The average top width of the dike crest is 1.0 m which is an increase of 0.4 m from the original 0.6 m design.
- The foundation pads were increased to an average of 26.8 m x 26.3 m for Tank #4 and 13.5 m x 13.3 m for Tank #6 which is an average increase of 0.6 m and 2.4 m respectively.
- The minimum foundation shoulder was increased by 0.2 m to 1.4 m for Tank #4 and by 0.8 m to 2.0 m for Tank #6.
- The average tank foundation pad slope were made steeper for both Tank #4 and Tank #6. Drainage around the tanks foundations was found to be adequate.
- The average tank foundation thickness for Tank #4 was decreased by 0.05 m to 0.35 m and for Tank #6 remains at 0.4 m as designed.
- The slope of the floor of the secondary containment was increased to improve the flow directions towards the sump which was found to be suitable.
- The riprap was removed from the ditch, approved by the designer. The geometry of the ditch was changed due to constructability issues and approved by Agnico Eagle. The overall water management of the containment facility was unaffected, sloping toward the sump area where the clean water will be pumped out of the fuel farm.

5.1.2 Dike and Secondary Containment for Refueling Service Area

- A secondary containment was added to the original design of the refueling service area as an additional measure to improve the potential spill management as shown in the as-built drawings, see Appendix A. The capacity of this additional secondary containment area is 691 m³.

Table 5.1: Industrial Site Fuel Storage and Containment Facilities Geometry and Characteristics

Item	Proposed		Actual		Difference
	Tank #4	Tank #6	Tank #4	Tank #6	
Secondary Containment Permeability (max.)	$1E^{-6}$ cm/s		$1E^{-13}$ cm/s		- $9.9E^{-7}$ cm/s
Dike: length, width (CL to CL) (avg.)	82.7 m x 57.7 m		81.3 m x 57.6 m		- 1.4 m / - 0.1 m
Dike height (avg.)	1.8 m		2.0 m		+ 0.2 m
Containment Height (avg.)	1.65 m		1.73 m		+ 0.08 m
Dike flat top width (avg.)	0.6 m		1.0 m		+ 0.4 m
Dike embankment slope (avg.)	1V:2H		1V:2H		-
Impervious area	4 870 m^2		5 071 m^2		+ 201 m^2
Tank Foundation Pad (avg.)	26 m x 26 m	11 m x 11 m	26.8 m x 26.3 m	13.5m x 13.3 m	+ 0.6 m / + 2.4 m avg.
Tank Foundation Thickness (min.)	900 mm	900 mm	900 mm	900 mm	-
Tank Foundation Shoulder (min.)	1.2 m	1.2 m	1.4 m	2.0 m	+ 0.2 m / + 0.8 m
Tank Foundation Pad Embankment Slope (avg.)	1V:2H	1V:2H	1V:2H	1V:2H	-
Tank Foundation Pad Slope (avg.)	1V:120H	1V:120H	1V:60H	1V:60H	Steeper / Steeper
Tank foundation pad thickness, above surrounding ground (avg.)	0.4 m	0.4 m	0.35 m	0.4 m	- 0.05 m / -
Depth of Liner Under Fill (avg.)	0.3 m		0.37 m		+ 0.07 m
Fuel Farm Area Containment Capacity	6 800 m^3		6 631 m^3		- 169 m^3
Refuelling Service Area Containment Capacity	-		691 m^3		+ 691 m^3

5.2 Inspection, Construction Monitoring, and Inspection Reports

The construction monitoring was managed by Agnico Eagle. Several activities were conducted during construction to ensure the quality of the work. Here is a description of the reports prepared to summarize the quality control, monitoring, and/or inspections performed during the construction of key activities.

- Several particle size analyses were conducted for the 30 mm minus produced from Run of Mine material to be used for the liner system. It was approved by the field engineer and the results and summaries can be found in Appendix I.
- Civil Earthworks Inspection Test Plan (ITP) dated September 2018 prepared by MTKSL in conjunction with Agnico Eagle, see Appendix J.
- *Quality Control Final Report* prepared by Texel Geosol for Nuna Kivalliq Earthworks Inc, see Appendix K. Testing, both non-destructive and destructive, was performed to ensure the quality of the installation of the geosynthetic materials, including welding. Texel Geosol certified that all materials were installed according to the project plans and specifications.

6.0 EARTHWORKS

A shortage of on-site granular material led to slight changes in the materials. These changes were approved by the design engineer as per multiple requests for information (6515-C-230-005-RFI-001 and 6515-C-230-009-RFI-015), see Appendix L:

- The layer of 200 mm minus granular material outside the tank pedestals was eliminated while the layer that was specified under the tank pedestals was replaced with Run of Mine granular fill where the larger particles were removed.
- The fill thickness of the 30 mm minus granular fill over and under the liner system was changed to 300 mm and 200 mm respectively, approved by the designer. This change was to allow the heavy equipment required for construction to access the site. This change did not affect the total material quantities.
- The 600 mm minus Run of Mine material outside of the tank pedestal footprints (including the perimeter berms) was replaced with 600 mm minus Esker material.

The as-built material quantities for the main Industrial Site fuel storage containment facility area are presented in Table 6.1 below.

Table 6.1: Earthworks As-Built Material Quantities

Item*	Proposed*		Actual**		Difference	
	Tank Farm	Refuelling Service Pad Area	Tank Farm	Refuelling Secondary Containment Area	Tank Farm	Refuelling Area
Sand	50 m^3	-	50 m^3	-	-	-
Riprap (50-300 mm)	35 m^3	-	-	-	- 35 m^3	-
30 mm minus	2 500 m^3	-	6 476 m^3	1 557 m^3	+ 3 976 m^3	+ 1 557 m^3
50 mm minus	105 m^3	1 260 m^3	-	-	- 105 m^3	- 1 260 m^3
200 mm minus	2 950 m^3	2 500 m^3	-	-	- 2 950 m^3	- 2 500 m^3
Borrow Pit CL-A / Run of Mine (600 mm minus)	22 588 m^3	6 012 m^3	20 233 m^3	1 620 m^3	- 2 355 m^3	- 4 392 m^3
Total of fill	**28 228 m^3**	**9 772 m^3**	**26 759 m^3**	**3 177 m^3**	**- 1 469 m^3**	**- 6 595 m^3**
540 g/m^2 Non-woven geotextile for tank farm area	4 870 m^2	-	5 243 m^2	-	+ 373 m^2	-
HDPE Geomembrane for tank farm area	9 740 m^2	-	10 486 m^2	-	+ 746 m^2	-

* The proposed item names and values in the table have been taken from the latest drawing that was issued for construction, 65-000-230-223 revision 1.
** The actual item names and values in the table have been taken from the latest survey drawing, see Appendix B.

- The granular material changes as presented in this section along with the dimension changes mentioned in section 5.0 resulted in the material quantity changes of the tank farm presented in the table above.
- The granular material quantities shown in the refuelling secondary containment area are reflected in the table above while the remainder of the quantities of the refuelling service pad area was allocated to the industrial site general pad resulting in the difference between the proposed and actual quantities.
- The geotextile and geomembrane quantities associated to the refuelling secondary containment area added are not provided.

7.0 LIMITATIONS OF REPORT

This report and its contents are intended for the sole use of Agnico Eagle Mines Ltd. and their agents. Tetra Tech does not accept any responsibility for the accuracy of any of the data, the analysis, or the recommendations contained or referenced in the report when the report is used or relied upon by any Party other than Agnico Eagle Mines Ltd., or for any Project other than the proposed development at the subject site. Any such unauthorized use of this report is at the sole risk of the user. Tetra Tech accepts no responsibility for losses, claims, expenses or damages, if any, suffered by a third party as a result of any decisions made or actions based on this report. Use of this report is subject to the terms and conditions stated in Tetra Tech's Services Agreement.

While it is believed that the information contained herein is reliable under the conditions and subject to the limitations set forth in the report, this report is based on information not within the control of Tetra Tech, nor has said information been verified by Tetra Tech, and Tetra Tech therefore cannot and does not guarantee its sufficiency and accuracy. The comments in the report reflect Tetra Tech's best judgment in light of the information available to it at the time of preparation.

Use of this Document acknowledges acceptance of the foregoing conditions.

8.0 CLOSURE

We trust this report meets your present requirements. If you have any questions or comments, please contact the undersigned.

APPENDIX C – STATUS OF INSTRUMENTS DURING PRESSURE TEST

APPENDIX D – ALL APPLICABLE ITRs & LOGs

1. PURPOSE

This procedure provides the requirements for hydrostatic & Pneumatic pressing testing of piping system.

2. CODES AND STANDARDS

- ASME B31.1
- ASME B31.3 (CSA B 51-03)

3. SAFETY AND ENVIRONMENT MEASURES

Promec will set the organisation and implement the safety measures with the help of CLIENT's staff.

Moving proper containments, for the disposal of spilled hydrostatic fluids and any contaminated soil that results hydrostatic fluids.

All activities must be fully documented and provided to R&E.

3.1 Safety Measures during the Preparation of the Test

- Define a specific area for each pressure test.
- Make a list of authorized personnel that will have access to the area during the test.
- Advise other sub-contractors of the terms of tests and the forbidden works to be performed in the area of the test.
- Inspect temporary installations and equipment before conducting the tests to comply with current safety measures.
- Inspect and check temporary scaffolding and lights for inspection, if required.
- List all equipment that will be handled during filling, pressurizing and drainage of the system.
- Check gauge calibration list for measurement and control equipment. (Pressure test gauges shall be calibrated once every six months).
- Ensure that all the test fluids shall be stored and/or disposed of in a safe and acceptable manner.

3.2 Disposal of Test Medium

The release of hydrostatic test water in an amount of 1,000 m^3, or more, requires a registration number from AENV as proof of authorization to release hydrostatic test water. Contact R&E at least one month prior to beginning testing so applications can be completed and a registration number received the following information is required for applications:

- Name, address, fax and phone numbers of the person responsible for the testing.
- Type of pipeline, storage tank or vessel.
- Legal land descriptions for the beginning and end of the pipeline section(s), storage tank or vessel to be tested.

- Total length of pipeline to be tested.
- Inside diameter of the pipeline (mm) to be tested.
- Total volume of hydrostatic test water to be used (m^3).
- Source of the hydrostatic test water: groundwater, surface water, municipal, or other.
- Origin or name of source water.
- Anticipated date of withdrawal of source water.
- Location of release of test water (legal land description).
- Start and end dates for release.
- Volume of release (m^3).
- Approximate rate of release(s) (m^3/hr).
- Name and location of receptor: land, surface water, injection well, other.
- Additives used (MSDS sheet(s) must be included).
- A description of the treatment and mitigative methods used prior to and during release.
- A map, diagram, or air photo of the release area showing release location, receiving land, direction of receiving water flow (if applicable) and sampling locations (soil and water).

If there are any changes to the registration information after submission, R&E must be notified immediately. The application must be signed by the person responsible for the pipeline/ storage tank indicating that the testing will be done in accordance with AENV's Code of Practice.

3.2.1 Glycols Diluted with Water

Glycols diluted with water may be used for hydrostatic testing, but must be properly managed so as not to spill, contaminate soils, or contaminate ground or surface waters and must be disposed off site in an environmentally safe manner. All activities must be fully documented.

3.2.2 Test Water Release Authorization

Upon completion of testing and prior to release, a representative grab sample of the hydrostatic test water must be obtained from the testing pipes and analyzed as specified in Appendix A – "Monitoring Requirements and Limits for Release to Land" and Appendix B – "Monitoring Requirements and Limits for Release to Receiving Water". Hydrostatic test water must not be released before to obtain R&E approval.

3.2.3 Liquid Disposal Documents

The testing crew supervisor must compile the following information for each hydrostatic test:

- A schematic diagram and details of the monitoring and release operations, including monitoring points, holding system, conveyance system, hydrostatic test water release flow rate and area of receiving water.

- Where the release is to receiving water, the name of the receiving water, the estimated rate of flow of the receiving water at the time of the release and photographs taken before, during and after release at the point of release and downstream of a distance of at least 100 meters from the point of release for flowing water.
- Photographs of the sampling points, holding system and conveyance system.
- Where released to land, photographs of the land taken 7 days after the release is complete.
- All analytical results obtained for the hydrostatic testing.
- All information must be retained for a minimum of 5 years after completion of the hydrostatic testing.

4. GENERAL

4.1 Introduction

As the line designation total this procedure describes the pressure tests that have to be achieved on the following systems:

CH: Chemicals
CRW: Cold Recycle Waters
CWR: Cooling water return
CWS: Cooling water supply
DW: Drinking water
FW: Fire water
IWR: Inhibited water return
HC: High pressure condensate
HRW: Hot recycle water
HS: High pressure steam
IWS: Inhibited water supply
LC: Low pressure condensate
LS: Low pressure steam
IA: Instrument Air
LLS: Low low pressure steam
MS: Medium pressure steam
UA: Utility air
UW: Utility water
WRW: Warn recycle water
DR: Drain
EQT: Equipment trim
PA: Plant air

4.2 Applied Regulations and Standards

The pressure tests will be conducted according to standard ASME B 31.1, Article 137, and ASME B 31.3 (CSA B 51-03) - Pressure Test.

4.3 Hydrostatic/Pneumatic Test Package

The Pressure Test Package consists of:

- Piping Pressure Test Record.
- Copy of the Line Designation Table.
- A copy of the P & ID showing the lines involved.
- Isometrics drawings.
- Copy of the drawings gauges calibration sheet.
- All NDE approved.

The Pressure Test Package will be submitted to CLIENT's for review and approval to proceed prior to testing.

5. PREPARATION FOR THE PRESSURE TEST

5.1 Spring Supports

If necessary, the spring supports must be blocked before filling.

Promec will check that all pipe supports are entirely installed according to the drawings.

5.2 Wireless Communication

To ensure at all times that communications are constant between the operator of the pressurizing pump and the workers monitoring the control gauge on the highest location of the piping system installation, two ways radio communication shall be used.

6. HYDROSTATIC/PNEUMATIC TEST PROCEDURE

6.1 System Inspection

- Promec shall check pipe loop with all approved documentation:
  - NDT/PWHT.
  - Check that all specified bolts and gaskets are installed.
  - Check that all vents and drains are installed.
  - Check that all pressure connections are installed correctly.
  - Check for direction of flow through filters and strainers, traps, check valve, etc.
  - Check that all temporary pipe supports have been removed.
  - Check that all in-one valves installed are completely open and protected (secured against unauthorized closing.
  - Check that temporary spools have been installed.
  - Check test medium for conformity to requirement
  - Check pressure gauge calibration.

6.2 System Water Filling, Air Venting, Draining and Flushing

Considering that the water filling for the pressure test is done for the first time, it is necessary to flush the piping system by filling and draining. For this purpose, water from the fire hydrant will be used. If fire hydrants are not available, water shall be trucked in and pumped into the system.

Promec shall ensure that the water that flows out in the period of drainage does not contain any hazardous contaminant for the environment so it can be directly poured into the sewer. One complete fillings and flushes should be enough.

Air venting is accomplished with valves installed for this purpose on the highest locations of the tested systems.

Air venting is completed when water is flowing from the air venting valves in a continuous flow free of air bubbles.

Speckable, blind, blinds flanges, temporary pipe plug or caps will be installed at locations indicated on isometrics and/ or P &ID's drawings.

Place of nozzles for connection on pressurised pump, gauges and air venting valve are shown on schematics, which will be attached for each hydrostatic testing system. The form to be used will be developed with CLIENT.

6.3 Water Requirements

For hydrostatic test, the test fluid shall be clean filtered water that will not corrode or damage the system being tested.

Approval must be obtained from CLIENT if the test fluid is anything other than clean water.

6.4 Inspection of the Pressurized System

The hydrostatic test must be performed during at least 10 minutes.

Visual inspection is mandatory. In the case of a leakage, the inspector will visibly mark the area with paint marker.

6.5 Acceptability Standard

The pressure test procedure is considered successfully conducted when:

- The test pressure is reached and kept constant.
- No trace of cracks, leaks and changes in the shape of parts of the system have been observed during inspection.
- The verification of the written report is noted and approved by all participants witnessing the pressure test.

6.6 Hydrostatic/Pneumatic Test Procedure Completion

A test record shall be prepared for each piping system tested and shall include the following:

- Date of test
- Identification of piping system tested
- Test fluid
- Test pressure
- Duration of test
- Test fluid temperature
- Ambiant temperature
- Pressure gauge number
- Certification of results by examiner with name and signature.
- Approval by CLIENT

N.B.: For testing an austenitic stainless steel piping, checked that the chlorine is under than 50 ppm.

7. WATER RELEASE COMPLETION

When the hydrostatic test is completed, the water stay in the pipe or in a holding vessel until Promec obtains the authorization for releasing the testing fluid. After, we use a truck to transport the water to the release area or, if possible, a water disposal ditch is used.

8. RESPONSIBILITIES

8.1 Responsibilities and Duties of Contractors

Promec's working team shall be responsible for the quality of work and for the compliance of the test procedure. Complete activities shall be registered in the hydrostatic test procedures log book. During the hydrostatic test, Promec shall provide a working team to cover the following activities:

- Water filling and air venting of system under test.
- Pressurizing of system.
- Control of pressure at highest point of system.
- Drainage of system after testing.

8.2 Supervisor of the Hydrostatic Test Procedure (CLIENT)

The hydrostatic test supervisor shall be nominated by CLIENT and coordinate the work with all other participants.

9. PNEUMATIC TEST

Wherever a hydrostatic test cannot be performed, a pneumatic test should be carried out upon CLIENT's approval.

Appendix C

STATUS OF INSTRUMENTS DURING PRESSURE TEST

STATUS OF INSTRUMENTS DURING PRESSURE TEST

Remove:

- Control Valves
- FlowInstruments-Rotameters (Do not force reverse flow)
- Flow Meters-positive displacement type
- Flow Switches-van type
- Orifice Plates (Install after hydrotesting and line flushing)
- Pressure Regulators
- PSV's, TSV's- 3/4" & 1 " screwed

Block and Vents:

- Analyzers
- Flow Instruments-D/P cell & bellow types
- FlowMeters – turbine type
- Flow Indicating Switches-bellows type
- Level Instruments-C/P cell & bellows type
- Pressure Gauges
- Pressure Instruments-all types
- Pressure Switches

Blind Off:

- PSV's (Test gauge may be used if one is furnished; Blinds not required on PSV outlets discharging into a system being tested at 103kPa (15 PSI) or less.)

Include in Test:

- Gauge glasses
- Level Instruments-displacer type (Do not overpressure. If in doubt, block and drain instead.)
- Level Switches-float type (Do not overpressure. If in doubt, block and drain instead.)

To avoid damage due to freezing, all instruments shall be protected. As a good practice it is recommended that instruments be drained and process lead lines blown out with air or nitrogen in preparation for cold weather and during cold weather.

     - *3.1.3 Flushing and cleaning* 4
4. **PUNCH LIST** 4
5. **RESPONSIBILITY MATRIX** 4

APPENDIX A – RESPONSIBILITY MATRIX

1. SCOPE

This procedure summarizes Promec activities to achieve a "Ready for Pre-commissioning" status.

2. "SYSTEMS" METHODOLOGY

The basic principle of the plant completion scheduling will be to define, prepare, carry out and report all pre-commissioning by system.

2.1 System Definition

The partition of the plant into systems is a key preparation activity that has a major impact on all aspects of completion operation: the system must be defined so as to be independent as possible, not too small, but of the manageable size and exactly adapted to the start-up sequence.

The partition takes place as early as possible in accordance with precise system boundaries, system sequences and system numbering defined by the client and reported on marked-up P & ID's Single Line Diagrams as support documents.

3. PRE-COMMISSIONING

3.1 Mechanical Completion (MC)

A walk-down and punch list will be completed by the client and Promec on each system as early as practical before the end of the MC.

If both parties are satisfied that the system is mechanically completed enough to go into the commissioning phase, all outstanding deficiencies are noted on the punch list, and handover documents are completed and signed.

3.1.1 CONFORMITY CHECK

Carried out on each item of equipment or component, such as pressure gauges, valves, vents and drains, safety vales, etc. to verify the condition of the equipment, the quality of the installation, the compliance with project drawings and specifications, manufacturer's instruction, safety rules, codes, standards and good practice. These activities are generally carried out in an "un-energized" state, like no pressure in the pipe.

3.1.2 ENERGIZED TESTS

These "energized" tests concern the pressure testing of piping. This pressure testing will need to be done using the approved Promec's Procedure.

3.1.3 FLUSHING AND CLEANING

Piping systems must be flushed or air blown to remove construction debris. Under special circumstances, the client's approval is required to combine the hydrostatic/pneumatic test with the flushing activities.

4. PUNCH LIST

While the construction checks and tests are being performed, all discrepancies, damaged or missing equipment, malfunctions, missing documents, etc. are recorded in the punch list, if the situation was not able to be corrected immediately.

5. RESPONSIBILITY MATRIX

The Completion Activities are now further defined in the following Appendix A - "Responsibility Matrix".

This matrix provides a useful list of the piping completion activities and it establishes to which category they belong pre-commissioning (de-energized) and pre-commissioning (under-pres).

Appendix A

RESPONSIBILITY MATRIX

Responsibility Matrix	Contractor Responsibility	CLIENT Responsibility
LEGEND		
X = Contractor responsibility	X	
O = CLIENT responsibility		0
A = CLIENT approval hold point		A
W = CLIENT witness notification		W
R = CLIENT documentation review		R

CLIENT's APPROVAL HOLD POINT (A)

When Promec is ready to pre-commission any part of any system, which is identified as requiring CLIENT's approval, Promec shall duly notify CLIENT's representative, with 4 days written notification. Timely Review Meetings shall also be conducted between Promec's Pre-commissioning Manager and CLIENT's Commissioning Representative for the purpose of advising CLIENT on the specific Status/ Timing of all Pre-Commissioning Activities Requiring CLIENT's approval.

CLIENT WITNESS POINT (W)

When Promec is ready to pre-commission any part of any system, which is identified as requiring CLIENT witness, Promec shall duly notify CLIENT's Representative, with two days written notification. Timely review meetings shall also be conducted between Promec's QA/QC and CLIENT's Commissioning Representative for the purpose of advising CLIENT on the specific status/ timing of all pre-commissioning activities requiring CLIENT witness.

CLIENT DOCUMENTATION REVIEW (R)

When Promec has drafted the pre-commissioning procedures, descriptive and operating manuals, maintenance manuals, system schedules, and/or related final documentation etc. pertaining to pre-commissioning of any system, Promec shall formally issue via transmittal to CLIENT's Representative, for review & comment purposes. These documents must be received by CLIENT 14 days in advance of final issue.

NOTES:

CLIENT Signatures on Pre-commissioning Documentation

CLIENT's Representative in attendance will personally sign only for the relevant Pre-commissioning Documentation for which he/she approves, witnesses or reviews.

Functional Test Certificates & CLIENT Signatures

Upon completion of a functional test and proven that it has been successful when referring to the Contract requirements, CLIENT and Promec representatives will sign the test certificate.

Ready for Commissioning Standard

APPENDIX A – ALL APPLICABLE ITRs & LOGs

1. PURPOSE

The purpose of this procedure is to specify the requirements for erection, joining and installation of shop fabricated spools. It will ensure that the right piece of pipe is installed at the right location and complies with the codes, standards, and isometric drawings.

2. PREREQUISITE

The following measures shall be taken before starting works:

- All technical documents are available (latest version):
  - Isometric drawings.
  - Line lists.
  - General Arrangement drawings.
- No other work is achieved on the same place of work.
- Piping spools and piping equipment have been identified and inspected.
- Transportation equipment and lifting equipment are available.
- Tools, lifting equipment, levelling equipment, etc. are available and have been inspected.

3. CODES AND STANDARDS

n/a

4. FIELD FABRICATION

4.1 Piping

Fabricator shall shape or bevel the joints to be field welded.

Adjacent sections of longitudinal welded pipe that are joined by butt welding shall have the longitudinal weld seams positioned so that they are at least 30 degrees apart and above the horizontal centerline.

Wherever possible, Promec shall not position the longitudinal weld seam on the top or bottom of the line so that branch connections such as couplings and stub-ons are located on the seam.

4.2 Internal Misalignment

Internal misalignment criteria shall be governed by the following:

- Pipe-to-pipe or pipe-to-fitting NPS (Nominal Pipe Size) 24 and smaller: ±1/16 of an inch deviation.
- Pipe-to-pipe or pipe-to-fitting NPS 26 and larger: ±1/8 of an inch deviation.
- If the deviation factors are exceeded, one of the following procedures shall be used:
  - Rotate the pipe or fittings to reduce misalignment to the acceptable tolerances (before attempting any of the following methods).
  - Use spreaders or internal or external lineup clamps to correct moderate out-of round condition.
  - Backweld the root pass.
  - Taper the wall of the component internally, after obtaining approval from the client, to ensure wall thickness is not reduced below the minimum required by the code.

4.3 Flanges and Fittings

Flange bolt holes are to be oriented as follows, unless otherwise indicated on the piping drawings:

- Flange face vertical: bolt holes to straddle vertical centerline.
- Flange face horizontal: bolt holes to straddle north-south centerline.
- Orifice flanges shall be fabricated with the taps in the exact orientation shown on the piping drawings. The up and down stream sections of pipe to which the orifice flanges are attached may be standard mill run pipe, but each piece shall be a choice hand-selected piece, and the interior of the pipe shall be round, smooth, and free from blisters and scale; welds shall be grounded flush. Field welds shall be kept at a maximum distance from the face of the orifice.
- Where line taps and 'olets are required, first attach the connection fitting then, the hole for each line tap shall be drilled square to the axial centerline, clean, sharp, and free from burrs, wire edges, or other irregularities.
- Slip-on flanges shall be welded inside and outside. Refer to Figure 328.5.2B of ASME B31.3. The weld shall be applied so that the flange face shall be free of weld spatter and does not require refacing.

4.4 Reinforcing Pads

Reinforcing pads shall be installed only where called for on the piping drawing. Pad material shall be the same as the pipe material, unless otherwise authorized by the client. Drawing will specify size and pad thickness.

4.5 Piping verified against the isometric drawings

Check that the position of the piping satisfied the isometric drawings informations: level, horizontal and vertical measurement, etc.

4.6 Fabrication Tolerances

The fabrication tolerances for fabricated piping shall be in accordance with client's specifications and standards.

5. ERECTION AND INSTALLATION

5.1 Erection

The following equipment will be used at different steps during pipe erection works: slings, shackles, mechanical or hydraulic jacks, come-along, measuring tapes, laser tool, temporary supports, boom trucks, etc.

5.2 Installation

5.2.1 GENERAL

Except where shown otherwise on the drawings, piping shall conform to the following:

- Be run level and plumb.
- Be run on North-South and East-West axis.

Evaluation of piping installation works sequence:

- Preparation of pipe to be welded: bevels, cleanliness, etc.
- Mounting of spools at ground level.
- Evaluation of how to handle the spools.
- Lifting of spools to their final location.
- Welding or assembling of spools.
- Identification of the welds.
- Installation of temporary supports.
- Etc.

Interior cleaning of piping:

- Marine Line, cleaning will be perform by pigging.
- Diesel Line (fuel farm and pumping station), cleaning will be perform by air blowing.

5.2.2 FLANGE BOLTING

Use a logical sequence of bolt tightening to ensure even gasket compression, as indicated in ASME B16.5

Unless specified otherwise, provide a bolt stress of 30,000 psi minimum or 45,000 psi maximum using a lubricant on the bolt threads (Refer to AEM-PI-PRO-004 Flanges Bolting Procedure).

Prior to bolt-up, examine flange faces. Flange faces shall be in as-new condition, and shall be wiped clean of any debris, excess oil, grease, and dirt. Restore damaged flange faces to as-new condition. Do not perform weld repairs on flange faces or flanges.

Do not use washers or spacers to make up bolt length. Bolt lengths are specified to prevent oversizing.

5.2.3 SUPPORTS

Install supports as indicated on the drawings.

Install spring supports in compliance with Manufacturer's instructions; keep them blocked until after line closure and hydrotest. Adjust them in the installed position and check them when operating conditions are reached.

Install all required temporary supports for hydrostatic testing.

Welding of supports shall be as indicated on the drawings.

5.2.4 BRANCH CONNECTIONS

Take care in shaping the ends of branch nozzles, as well as holes burned into the pipe for branch connections, to ensure fit with suitable provision for weld metal and so that the branch connections do not project inside the pipes.

5.2.5 CLEANLINESS OF PIPING

Open-end and flange protection shall be used throughout installation. Protect open pipes at times when work on them is not actually taking place.

Inspect individual pipe sections, prefabricated spools, and pipeline items internally during installation, and remove any foreign matter before final welding or bolting.

Piping contiguous with special equipment, which requires cleaning to the equipment Manufacturer's procedure, shall be inspected by and have cleaning supervised by the Manufacturer's representative.

5.2.6 FIELD PRESSURE TESTING

Testing of installed piping systems shall be in accordance with the previously referenced standards. (Refer to AEM-PI-PRO-001 Hydrostatic-Pneumatic Test Procedure for Piping).

6. PIPING INSTALLATION 4
7. PRE-COMMISSIONING 4
8. FINAL ACCEPTANCE 4

APPENDIX A – ALL APPLICABLE ITRs & LOG

1. SCOPE

This procedure provides primary inspection and installation requirements pertaining to the pumps installation.

2. PREREQUISITE

- Relevant isometric drawings are up-to-date.
- Shop drawings, vendor manuals and technical specs up-to-date.
- Preservation and storage plan in place.
- Relevant team mobilized and ready.
- Pump Installation Procedure prepared and approved.
- Materials and tools available with calibration certificates and calibration log entries.

3. VISUAL INSPECTION AND PREPARATION

- Check equipment skid for any sign of damage prior to installation.
- Begin preservation program.
- Verify elevation and centerlines are correct and are clearly marked on foundation.
- Pump installation includes foundation preparation, confirmation of center lines and elevations, preliminary alignment, machinery distortion to be checked at piping bolt up, soft foot check, final alignment, flushing and recharging of lubricants (pump, gear-box, drivers and lube oil tanks) in accordance with the manufacturer's recommendations.
- Mark appropriately on the foundation the jacking screw pads and anchor bolts locations.
- Jack-up equipment skid with external jacks to allow jacking screws pads installation and secure it with temporary supports.
- Circular jackscrew leveling plate shall be made of 2-inche diameter, 12 mm thick, CSA grade 300 Structural Steel Plate, or equivalent type round stock material. The plate shall be clean and free of all scale and oil will be readjusted.

4. LEVELLING AND FIXING

- Install the jacking bolts in their respective screw location. Use the installed jacking bolts to bring the skid to the designed elevation. Ensure that pump nozzles are in proper orientation on the centerlines.
- Level the skid properly with an accurate leveling instrument using the equipment base machined faces. Align and adjust the pumps inlet and outlet flanges with the relevant pipe centerlines.
- After base plate leveling first alignment shall be performed. Soft-foot tolerance and coupling gaps shall be checked while the alignment is being confirmed. Coupling gap to be confirmed.

5. PUMP AUXILIARIES INSTALLATION

- Lube oil console is brought to design elevation and centerlines by the use of stainless steel shims and external lifting.
- Lube oil piping is loosely installed to verify best position.
- Electrical and instrumentation will be done by those disciplines using the relevant ITP's and procedures.

6. PIPING INSTALLATION

- Piping will be cleaned and installed by the piping discipline.
- Interconnecting lube oil piping, cooling water, suction / discharge and steam piping will be subject to fit up measurements. Pipe strain measurements and adjustment shall be carried out.
- Seal flushing lines to be cleaned and connected.
- Distortion due to piping stress: If distortion exceeds allowances, piping alignment shall be re-worked and re-checked.
- All piping that is attached to the equipment for the purpose of field welding will be electrically isolated from the equipment by use of isolating kits.
- A final pipe strain check will be performed and recorded.

7. PRE-COMMISSIONING, (AEM STD TO APPLY, TO BE DETAILED BY AEM)

- If applicable, vendor presence requirements shall be requested prior to final work.
- Lube oil pipe strain to witnessed
- Lube oil system to be flushed.
- Steam pipe blowing to be done by piping discipline.
- Running oil to be installed in lube oil console and pump bearing sumps.
- Motor bump test (uncoupled) to verify rotation will be performed on electric motor drive units.
- Final alignments with cold offsets to be witnessed.
- Pipe strain checks of steam lines and pump suction / discharge lines to be witnessed.
- All couplings and guards to be in place.
- Touch up painting will be completed.
- Mark in red on isometric drawing copy all final dimensions for as-built drawing preparation.

8. FINAL ACCEPTANCE, (AEM STD TO APPLY, TO BE DETAILED BY AEM)

- All inspection test records along with preservation records will be verified for handover to the turnover coordinator, along with relevant RFI's, NCR's and field trouble reports.
- A final punchlist will be cleared with no outstanding NCR's.
- Upon completion of work, final acceptance shall be obtained from CLIENT.

7. TOUCH-UP PAINTING 4
8. FINAL ACCEPTANCE 4

APPENDIX A – ALL APPLICABLE ITRs & LOGs

1. SCOPE

- This procedure provides inspection steps and requirements pertaining to a fuel tank.
- Each package is composed of a single unit.

2. PREREQUISITE

- Relevant isometric drawings are up-to-date.
- Shop drawings, vendor's manual and technical specs up-to-date.
- Relevant team mobilized and ready.
- Pertaining material and tools are prepared and ready.

3. VISUAL INSPECTION AND PREPARATION

- Check equipment for any sign of damage prior to installation.
- Mark on the foundation center lines and elevation references.
- If required, clean the foundation and skid exposed surfaces using compressed air.

4. LEVELING AND FIXING

- Jack up the equipment skid using external jacks keeping the skid level up to design elevation and center lines.
- Level the skid properly with an accurate leveling instrument. Align and adjust vessels inlet and outlet flanges with the relevant pipe axes (see relevant isometric drawing).
- Leveling shims shall to be installed on both sides of each anchor bolt. Wherever the distance between adjacent anchor bolts exceed 800 mm, additional leveling pads shall be installed midway between the anchor bolts.

5. AUXILIARIES INSTALLATIONS & INSPECTION

- External-Interconnecting pipes to be installed. Promec piping ITP to be followed for piping gaskets, studs and flange bolt-up.
- Internal inspection and cleaning to be performed if required.
- Instrumentation installation and verification to be performed by Promec instrumentation team.
- Complete equipment closing record form.

6. PRE-COMMISSIONING

- Follow vendor's operation manual procedure.

7. TOUCH-UP PAINTING

- Touch up painting shall be carried out on surfaces that have scratches or scrapes or other damages that have occurred during transportation and installation (paint is supplied by equipment vendor).

8. FINAL ACCEPTANCE

- All inspection and test records to be reviewed for completeness and securely filed for hand-over to turnover coordinator.
- Upon completion of works, final acceptance shall be obtained from the client.

1. SCOPE 3
2. REFERENCES 3
3. WELDING PROCEDURES 3
4. WELDER PERFORMANCE QUALIFICATION 3
5. WELDING MATERIAL CONTROL 4
6. FIT-UP AND WELDING 4
7. RADIOGRAPHIC INSPECTION 5

APPENDIX A – ALL APPLICABLE ITRs & LOGs

1. Scope

- This procedure describes the system for maintaining control of all production welding to the requirements of the applicable engineering specifications, codes and standards.

2. References

- ASME, Section IX - Welding and Brazing Qualifications
- ANSI, B-31.3 - Petroleum Refinery Piping
- ANSI, B-31.1 - Power Piping
- AWS, American Welding Society

3. Welding Procedures

- All welding performed on site will comply with applicable qualified welding procedures as specified in the Standard S40 05 13.
- Prime contractor's welders will be qualified to weld procedures in accordance with contract specifications. Prime contractor is responsible for certifying their own welders.
- Copies of the qualified welding procedures approved for that project shall be maintained on site by the Welding Foreman and Site Q/C Representative for reference and permanent retention.

4. Welder Performance Qualification

- It is the responsibility of the Site Q/C Representative to conduct or supervise the Welder Performance Qualification tests. At the discretion of the Corporate Quality Control Manager, a Welding Foreman or other qualified site supervisor may conduct these tests.
- Records attesting to the Welder Performance Qualification tests shall be generated and maintained by the Site Q/C Representative and the Welding Foreman.
- The Site Q/C Representative and the Welding Foreman shall maintain a complete listing of welders and welding operators employed. The form, Welder Qualification Log, is to be updated and reissued on a monthly basis and is to be distributed as required.

5. Welding Material Control

- The Site Q/C Representative and Welding Foreman shall make certain that the welding material used conforms to that of the welding procedure. No substitutions for the specified material will be made without written approval from the client.

6. Fit-Up and Welding

- Visual surveillance shall be performed to establish compliance to welding procedures. The inspection parameters listed below are recommended as guidelines
  - ✓ Inspect end preparation and joint configuration as established by applicable weld procedures and engineering specifications.
  - ✓ Inspect internal alignment and root opening prior to welding.
  - ✓ Check tack welds that are to be incorporated into the final weld, and be assured of proper blend grinding and absence of visual defects.
  - ✓ Check for proper welding materials and other essential variables of applicable weld procedures.
  - ✓ Check visually root pass for cracks, porosity, slag, fusion lines and quality workmanship (if required use LP).
  - ✓ Inspect completed welds for proper reinforcement. All welds should blend smoothly into the base metal and be free of cold lap or fusion at the toe.
  - ✓ Inspect weld for surface discontinuities such as undercut. Surface porosity is to be considered as an injurious defect and shall be repaired.
  - ✓ All repairs are to be made in accordance with approved procedures.
  - ✓ Each welder shall be responsible for stamping his assigned symbol immediately after completion of the weld. A smooth, flat spot shall be ground or filed on the reinforcement cap. The welder shall stamp his/hers identifying mark upon this spot.
- For ferrous material less than 1/4" (1/2" for nonferrous), the welder's symbol shall be recorded on the base metal by use of a halogen-free paint marker, or recorded on isometric drawings by the welding supervisor which shall be available to the Quality Control Inspector.

7. Radiographic Inspection

- The Site Q/C Representative or Welding Foreman will schedule radiographic inspections.
- Radiographic requirements shall be determined by the client standard to assure compliance to contract Codes and specifications.
- Welds requiring radiography will be flagged by a suitable means which will be consistent through contract completion.
- The Site Q/C Representative will complete the Radiographic Inspection Status Record, to indicate status of radio graphically-inspected welds. This form will be forwarded to appropriate supervision for distribution.
- In addition to the records generated under this procedure, marked-up isometric and orthographic drawings will be used as weld maps to indicate completion of radiographic inspection. This will allow a progressive record and give system status.

TABLE OF CONTENTS

Page

1. Qualified Individual 3
2. Qualified Firm 3
3. NDE Purchasing Language 4

The Authorized Company for carrying out NDT and its personnel engaged in non-destructive examinations should be familiar with Promec's examination methods and the methods prescribed by the applicable drawings, specifications, codes and standards. The following list outlines the most commonly used examination methods on a Promec project:

- VT - Visual Testing
- LT - Leak Testing
- PT - Liquid Penetrant Testing
- RT - Radiographic Testing (X-ray)
- MT - Magnetic Particle Testing
- UT - Ultrasonic Testing

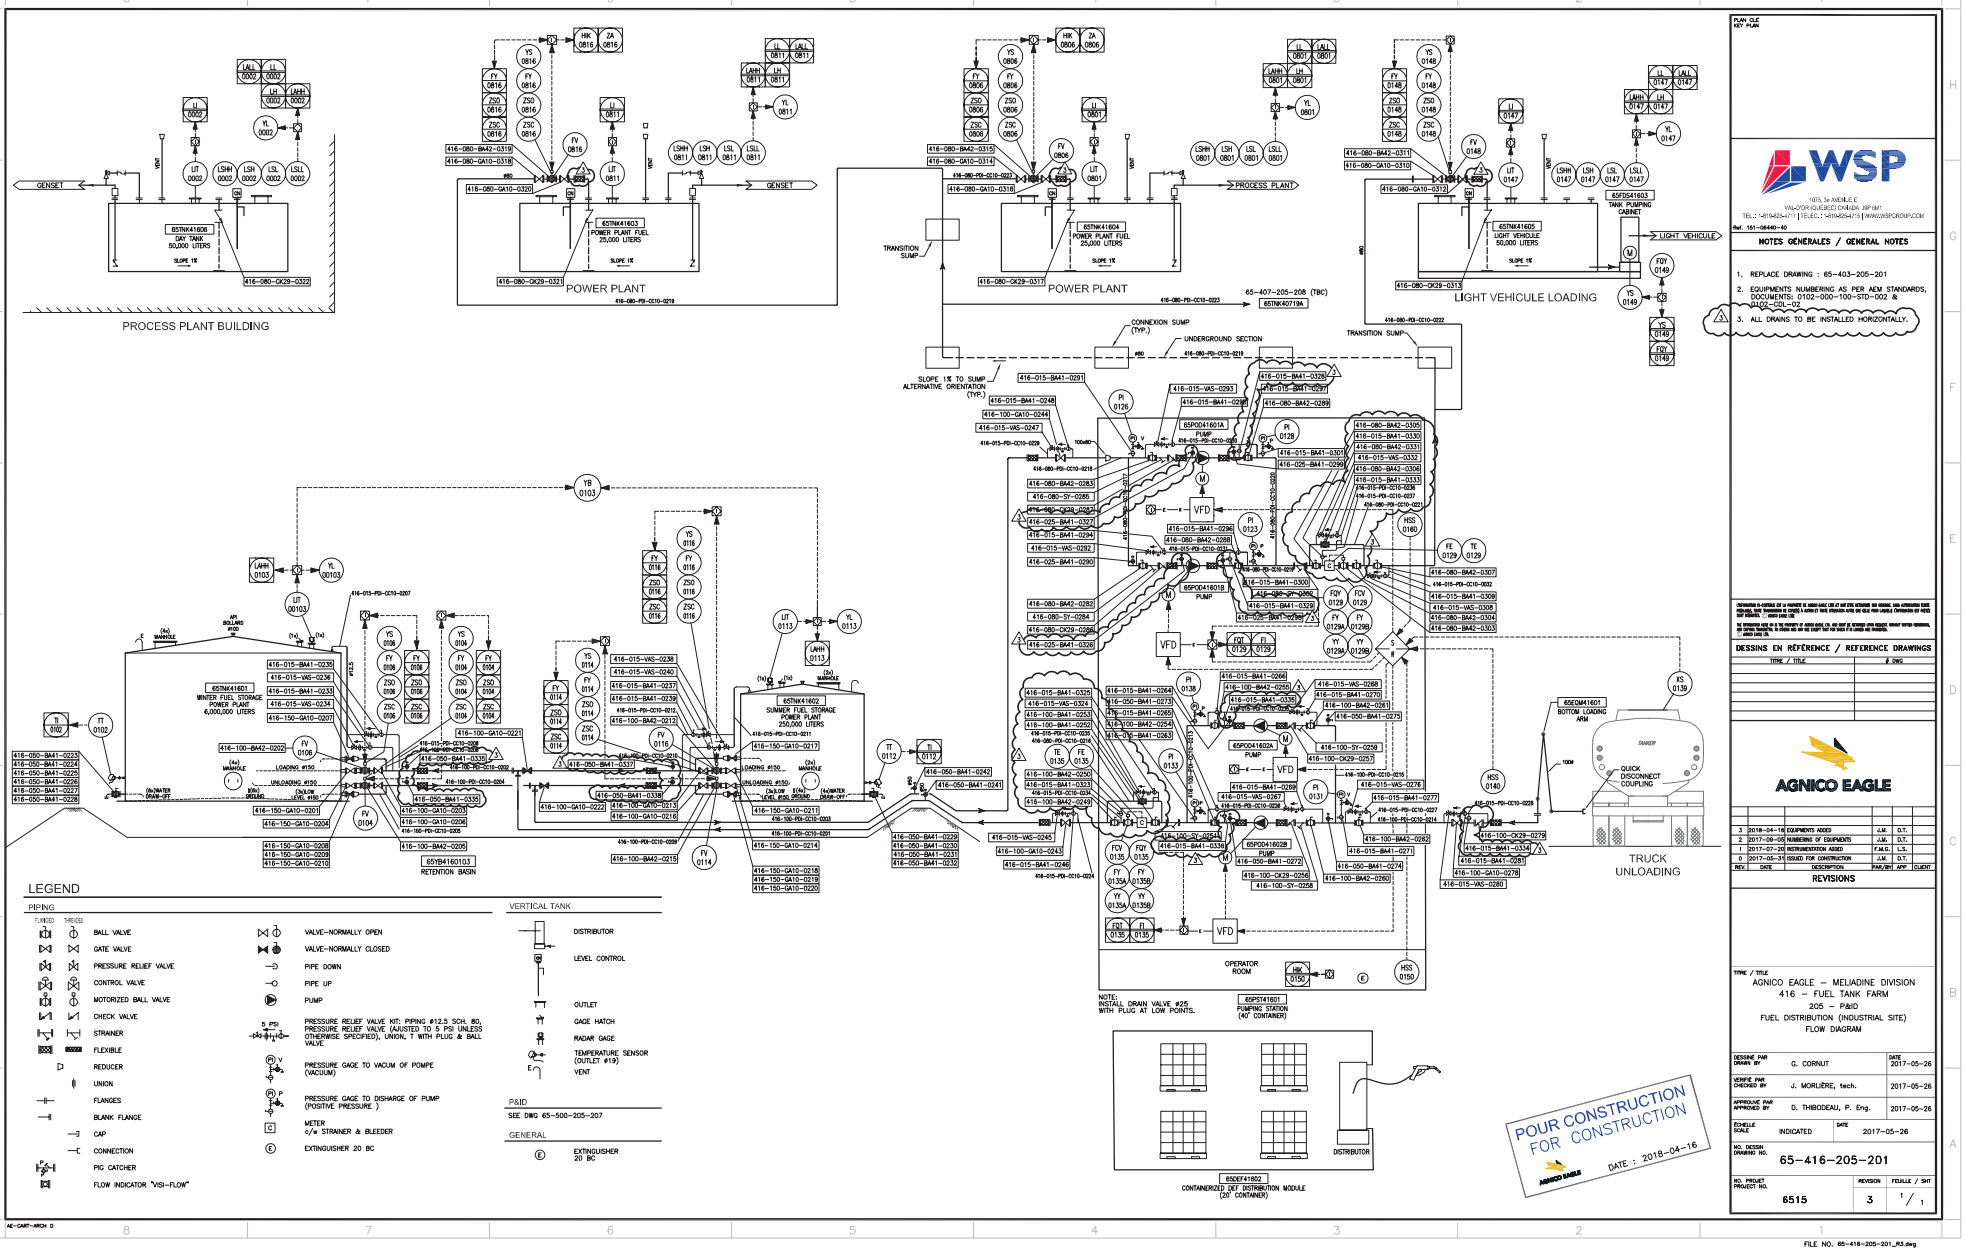
These methods as well as other methods may or may not, in whole or in part be sub-contracted to "qualified individuals" or firms to perform. The size and scope of the project dictates these conditions as well as the contract.

1. Qualified Individual

- The term "qualified individual" refers to the assigned person responsible for performing or reviewing the nondestructive examinations. All conflicts between the "qualified individual" and any other party will be resolved through the Project Manager and/or the Site Q/C Representative.

2. Qualified Firm

- The term "qualified firm" refers to a licensed NDE organization that performs NDE testing by subcontract for Promec. The qualified firms' contract must be governed by the contract between Promec and its client.
  - ✓ The selection of the NDE firm will be confirmed by the Corporate Quality Control Manager prior to awarding a contract.
  - ✓ The NDE firm will conduct its work in support of Promec.
  - ✓ All work performed by the NDE firm will meet the codes and specifications, quality and integrity.
  - ✓ The productivity and efficiency of the NDE firm shall be monitored to ensure that GSI and its client are receiving maximum value.



3. NDE Purchasing Language

- The following NDE Language shall be added to all Field PO's or subcontracts issued to a NDE firm. The following notes are to be used as a guide and the particular methods, codes and standards shall be verified prior to insertion into the P.O.

  - ✓ All work will be performed in accordance with ASME Section 5, Article 2 Radiographic Standards or ASME requirements.
  - ✓ All radiographic personnel shall be certified in accordance with CAN/CGSB-48.9712-2005 Latest Adopted Edition.
  - ✓ Prior to commencing any radiographic services, one copy of the following must be submitted to the Promec Quality Control Manager.
    - a) Liability Insurance Certificate. Retain copy and forward the original to the Site Project Manager.
    - b) State, Provincial and Federal Radiation Licenses (If Applicable).
    - c) All anticipated personnel certifications (For methods outlined in the contract).
    - d) Each radiographic technique procedure to be used (within the scope of the project).
  - ✓ Each crew shall have one (1) certified Level II Technician on site when working.
  - ✓ All subcontractor radiography shall be interpreted by the subcontractor for film quality and defects prior to surrendering the film and record sheets to the Promec Representative.
  - ✓ All record sheets shall be filled out completely, listing all weldment defects seen on film, whether the defects are acceptable or rejectable to codes or specifications, and shall be signed by the Subcontractor's Level II Technician.

3.	WELDING PROCEDURES	3
4.	WELDER PERFORMANCE QUALIFICATION	3
5.	WELDING MATERIAL CONTROL	4
6.	FIT-UP AND WELDING	4
7.	RADIOGRAPHIC INSPECTION	5

APPENDIX A – ALL APPLICABLE ITRs & LOGs

1. Scope

- This procedure describes the system for maintaining control of all production welding to the requirements of the applicable engineering specifications, codes and standards.

2. References

- ASME, Section IX - Welding and Brazing Qualifications
- ANSI, B-31.3 - Petroleum Refinery Piping
- ANSI, B-31.1 - Power Piping
- AWS, American Welding Society

3. Welding Procedures

- All welding performed on site will comply with applicable qualified welding procedures as specified in the Standard S40 05 13.
- Prime contractor's welders will be qualified to weld procedures in accordance with contract specifications. Prime contractor is responsible for certifying their own welders.
- Copies of the qualified welding procedures approved for that project shall be maintained on site by the Welding Foreman and Site Q/C Representative for reference and permanent retention.

4. Welder Performance Qualification

- It is the responsibility of the Site Q/C Representative to conduct or supervise the Welder Performance Qualification tests. At the discretion of the Corporate Quality Control Manager, a Welding Foreman or other qualified site supervisor may conduct these tests.
- Records attesting to the Welder Performance Qualification tests shall be generated and maintained by the Site Q/C Representative and the Welding Foreman.
- The Site Q/C Representative and the Welding Foreman shall maintain a complete listing of welders and welding operators employed. The form, Welder Qualification Log, is to be updated and reissued on a monthly basis and is to be distributed as required.

5. Welding Material Control

- The Site Q/C Representative and Welding Foreman shall make certain that the welding material used conforms to that of the welding procedure. No substitutions for the specified material will be made without written approval from the client.

6. Fit-Up and Welding

- Visual surveillance shall be performed to establish compliance to welding procedures. The inspection parameters listed below are recommended as guidelines
  - ✓ Inspect end preparation and joint configuration as established by applicable weld procedures and engineering specifications.
  - ✓ Inspect internal alignment and root opening prior to welding.
  - ✓ Check tack welds that are to be incorporated into the final weld, and be assured of proper blend grinding and absence of visual defects.
  - ✓ Check for proper welding materials and other essential variables of applicable weld procedures.
  - ✓ Check visually root pass for cracks, porosity, slag, fusion lines and quality workmanship (if required use LP).
  - ✓ Inspect completed welds for proper reinforcement. All welds should blend smoothly into the base metal and be free of cold lap or fusion at the toe.
  - ✓ Inspect weld for surface discontinuities such as undercut. Surface porosity is to be considered as an injurious defect and shall be repaired.
  - ✓ All repairs are to be made in accordance with approved procedures.
  - ✓ Each welder shall be responsible for stamping his assigned symbol immediately after completion of the weld. A smooth, flat spot shall be ground or filed on the reinforcement cap. The welder shall stamp his/hers identifying mark upon this spot.
- For ferrous material less than 1/4" (1/2" for nonferrous), the welder's symbol shall be recorded on the base metal by use of a halogen-free paint marker, or recorded on isometric drawings by the welding supervisor which shall be available to the Quality Control Inspector.

7. Radiographic Inspection

- The Site Q/C Representative or Welding Foreman will schedule radiographic inspections.
- Radiographic requirements shall be determined by the client standard to assure compliance to contract Codes and specifications.
- Welds requiring radiography will be flagged by a suitable means which will be consistent through contract completion.
- The Site Q/C Representative will complete the Radiographic Inspection Status Record, to indicate status of radio graphically-inspected welds. This form will be forwarded to appropriate supervision for distribution.
- In addition to the records generated under this procedure, marked-up isometric and orthographic drawings will be used as weld maps to indicate completion of radiographic inspection. This will allow a progressive record and give system status.

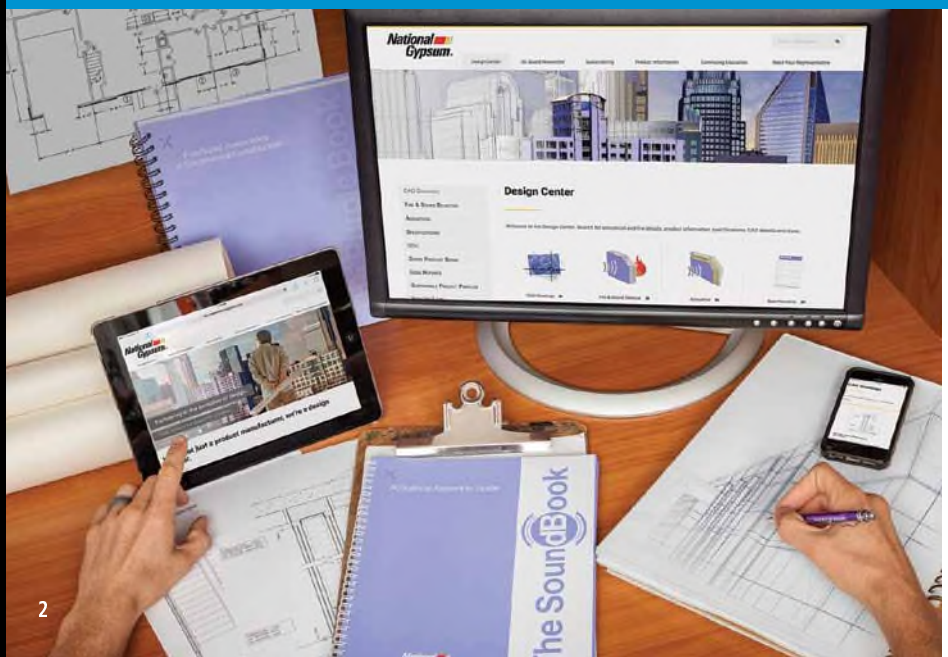
With High-Quality Products And Resources

Founded in 1925, National Gypsum is one of the world's largest producers of quality building products. For nearly a century, customers like you have looked to us for the best products, service and technical support. With a focus on sustainability, we strive to bring you the finest in construction products, education and resources to meet and exceed your expectations.



With Design That Considers The Environment

Together, we can attain the highest level of ecological responsibility and resource-efficient technology. National Gypsum is committed to developing and implementing sustainable green building policies, standards and practices. Beyond offering products that can help contribute to healthier environments and have achieved GREENGUARD Certification for indoor air quality, we can help you meet the criteria for green programs and LEED credits.

GREENGUARD GOLD

PRODUCT CERTIFIED FOR LOW CHEMICAL EMISSIONS: UL.COM/GG UL 2818

With Technical Support You Can Count On

Great products are nothing without great customer service. For detailed technical information about product applications, installation requirements, code requirements or roof and wall assemblies, call 1-800-NATIONAL[MD]. Talk directly to a technical expert with up-to-date knowledge of products, specifications, building codes and more. Our technical experts can even review your plans and drawings and get back to you with answers to your questions within 48 hours.

Working Wherever Your Project Takes You

Choose From Four Types Of PermaBase[MD] BRAND Cement Board:

More Hard-Working Varieties With Qualities You Can Depend On

With four types of PermaBase[MD] BRAND Cement Board to choose from, you'll find a match for most any project. This durable substrate withstands prolonged exposure to moisture in both interior and exterior applications. Lightweight and easy to install, PermaBase promises to deliver for the long run – with the industry's best warranties. It is also GREENGUARD Certified for low-chemical emissions, which can contribute to healthier indoor environments.

Saving You Time And Money

These exclusive PermaBase features translate to cost savings for you:

EdgeTech[MD] Technology – This patented, reinforced edge allows fasteners to be installed closer to the board's edge and reduces damage from handling.

Polystyrene Beads – Embedded in the PermaBase core, these beads help to lighten the board's weight, improve the ease of cutting, and create lower water absorption, preventing the mortar/finish adhesive from drying prematurely.

Our PermaBase[MD] Product Family

1 PermaBase[MD] Cement Board

The original that set the industry standard.

2 PermaBase PLUS[MD] Cement Board

Weighs 25% less than other cement boards on the market.

3 PermaBase UltraBacker[MD] Cement Board

Provides excellent rigidity for special applications with the lowest water-absorption rate.

4 PermaBase Flex[MD] Cement Board

Very flexible yet strong, and ideal for use around archways, columns, stairwells – wherever an evenly curved surface is required.

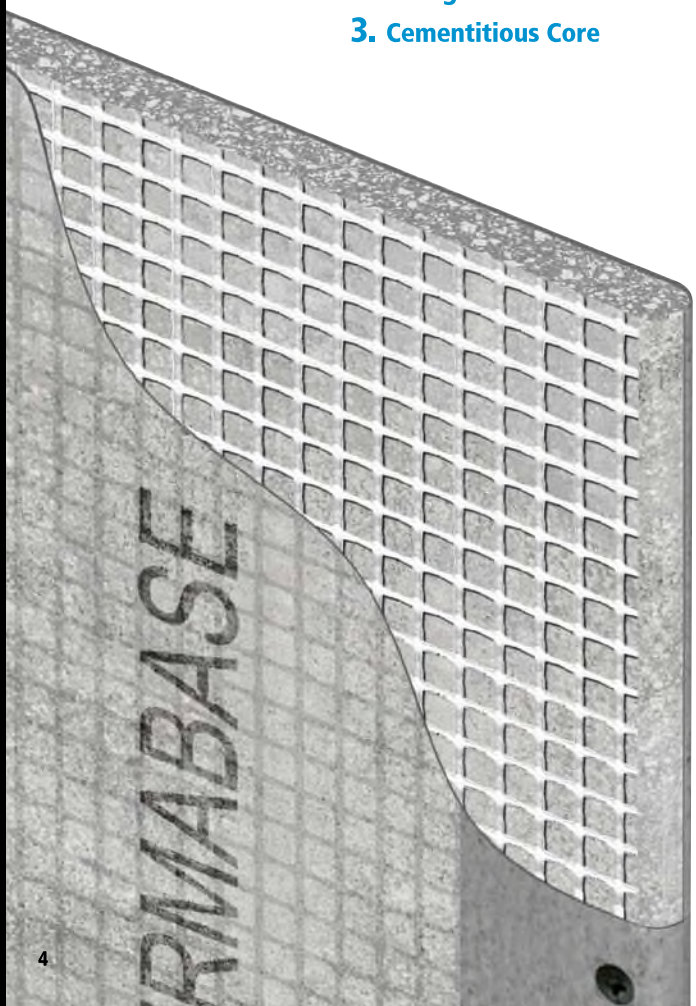
Building In Strength And Quality



Reinforce With The Best Rigid Substrate: PermaBase[MD] BRAND Cement Board

PermaBase[MD] provides a durable surface designed to withstand prolonged exposure to moisture. Made with Portland cement, aggregate and fiberglass mesh, it works well as an underlayment for tub and shower surrounds, countertops, flooring and a variety of other interior and exterior applications. Lightweight and easy to install, our patented EdgeTech[MD] Technology allows a closer nail or screw application.

Quality To The Core

1. **Patented Reinforced Edge**
2. **Fiberglass Mesh**
3. **Cementitious Core**

Resists Moisture Better

- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Achieves the industry's lowest water-absorption rating (ASTM C473) – offering better installation.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

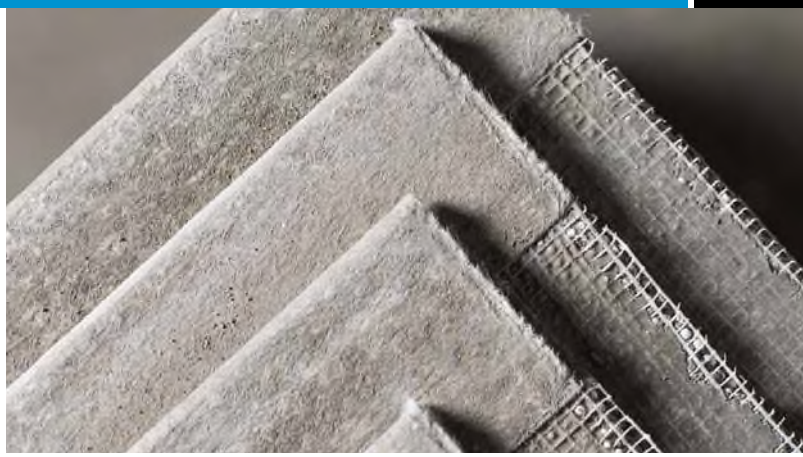
Stays Strong And Lasts Long

- Resists impact and remains dimensionally stable – extending the life of your project.
- Holds up to the toughest conditions.

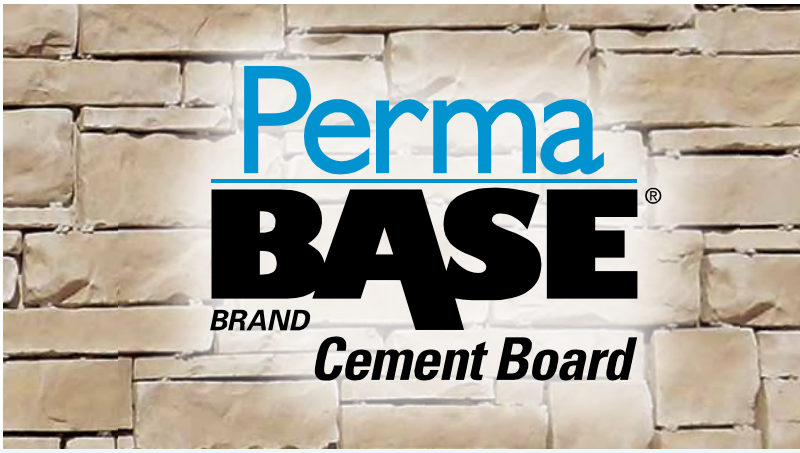
Installs Quickly

- Lightweight and easy to cut – speeding up installation.
- Reduces jobsite waste – easier, cleaner cut.
- Patented EdgeTech[MD] Technology allows for a closer edge fastening and reduces damage from handling.

Works For Interior And Exterior Projects



– One Panel, Many Applications



- Adhere tile, stone or thin brick directly to PermaBase in exterior applications – saving time and money.
- Durable substrate for direct-applied coating systems.
- Meets UL & ULC classifications for one- and two-hour fire-rated assemblies.
- Building code approved – one substrate that does the job of many.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.
- 15-Year Limited Warranty: Exterior applications.

What Sets PermaBase[MD] Apart From The Rest?

Physical Feature Benefits	PermaBase Cement Board	Other Cement Boards	Fiber Cement Boards
Low Weight Glass Mesh Cement Board	✓	○	○
Reinforced Edge	✓	○	○
Fastens Near Edge With No Breakout	✓	○	○
Highest Damage Resistancy From Handling	✓	○	○
Cleanest To Score And Snap	✓	○	○
Lowest Water Absorption	✓	○	○
Meets 40 psf Rating Wind Load Test Results (Stud spacing 16" o.c.)	✓	○	○
Cuts With Utility Knife Vs. Power Tools	✓	✓	○
Standard Fasteners Countersink Into Board	✓	✓	○
Can Be Used In Both Residential And Commercial Steam Rooms And Saunas	✓	✓	○
Inorganic Vs. Organic Core	✓	✓	○
Lifetime Limited Warranty For Interior Use	✓	✓	○
15-Year Warranty For Exterior Use	✓	○	○

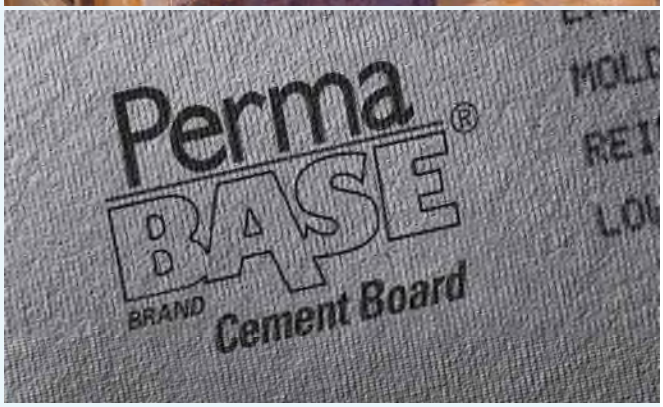
Expanding Your Project Horizon



Dream Up Your Designs – Interior And Exterior

Install Fast, Cut Costs And Improve Quality With PermaBase[MD] BRAND Cement Board

- Stays strong – manufactured from cement and fiberglass reinforcement.
- Provides consistent quality – produced in a factory controlled environment and meets ASTM C1325.
- Remains dimensionally stable.
- Resists moisture and mold.
- Cuts and handles easily – patented EdgeTech[MD] Technology allows fasteners to be installed closer to the board's reinforced edge and reduces damage from handling.
- Absorbs less water – providing greater open time and increased workability of adhering materials.
- Offers performance enhancement options – stronger and lighter alternative to traditional methods.

Interior Applications

PermaBase[MD] is a superior underlayment for many interior applications, including:

- **Kitchens**
  - Countertops
  - Backsplashes
- **Bathrooms**
  - Shower and tub enclosures
  - Garden and whirlpool tubs
  - Steamrooms and saunas
- **Special Additions**
  - Swimming pool and whirlpool decks and enclosures
- **Flooring**
  - For kitchens and bathrooms
  - For entryways and foyers
  - For laundry rooms
- **Walls**
  - For bathrooms
  - For accent walls
  - For fireplaces

Exterior Applications

PermaBase provides an excellent substrate for many in-demand exterior applications, including Cement Board Masonry Veneer Wall System (CBMV), Cement Board Stucco System (CBSS), Continuous Insulation (CI), and Exterior Insulation and Finish System (EIFS). PermaBase allows the combination of exterior finishes on one continuous wall sheathing, providing greater design flexibility.

- Commercial exteriors
- Residential exteriors
- Outdoor kitchens
- Decks

Cement Board Masonry Veneer Wall System (CBMV)

Combine the strength and durability of PermaBase with the popular beauty of stone and thin brick veneers. Use in residential and low-rise commercial applications.

Cement Board Masonry Veneer Wall System is designed to:

- Offer a complete, engineered solution for installation.
- Provide increased performance by utilizing polymer modified adhesive mortars (designed for hanging materials) vs. type S and N mortars (developed for stacking materials).
- Speed up your schedule – faster, easier and cleaner than traditional metal lath/scratch coat method.
- Offer the ability to incorporate an effective water-management system (type and placement of water barrier will vary based on local codes and/or warranties).

Designs you can achieve with this system:

- Use for a variety of building exteriors with manufactured or natural stone and thin brick veneers.

Note: A code-approved Water/Air Resistive Barrier (WRB) must first be installed to protect the cavity. For limitations, please see page 17 (Installation Guide).

Cement Board Stucco Wall System (CBSS)

Combine the strength and durability of PermaBase with the performance and aesthetics of reinforced base coats and textured finishes. Use in residential and low-rise commercial applications.

Cement Board Stucco Wall System is designed to:

- Provide increased impact and weather resistance (appropriate for all climates).
- Resist dirt, fading, cracking and peeling.
- Speed up your schedule – easier, cleaner installation than traditional stucco.
- Provide drainage system to help prevent water from penetrating behind cladding in frame construction.
- Comply with ASTM D226, protecting approved sheathings/structural components and helping to evacuate incidental water.

Designs you can achieve with this system:

- Attachment of special pre-molded shapes.
- Variety of finishes – many texture and color options.

Note: A code-approved Water/Air Resistive Barrier (WRB) must first be installed to protect the cavity. See page 17 (Installation Guide).

More Reasons PermaBase Is Excellent For Exterior Applications

- Allows multiple finishes on one substrate.
- Saves time and labor when compared with field-applied metal lath, brown and scratch coat installations.
- Works rain or shine – less affected by jobsite weather conditions.
- Scores and snaps for quick installation.
- Qualifies for multiple-year system warranties.

PHYSICAL PROPERTIES

Property Method	Test	1/4"	7/16" PLUS	1/2"	5/8"
Water Absorption % By Weight/24 Hours	ASTM C473	<8	10	<8	<8

Flame Spread/Smoke Developed	ASTM E84 CAN/ULC-S102	0/0	0/0	0/0	0/0
Compressive Strength (psi) (Indentation)	ASTM D2394	N/A	N/A	1250	1250
Wind Load (psf, Studs 16" o.c.)	ASTM E330	N/A	30	40	40
Thermal "R"/k Value	Property of Material	0.2/2.7	0.28/2.7	0.37/2.7	0.47/.2.7
Bending Radius (ft.)	Property of Material	N/A	5	5	5
Falling Ball Impact (12" Drop)	ASTM D1037	Pass	Pass	Pass	Pass
Linear Variation (Due to change in moisture content)	ASTM D1037	<0.07%	0.05%	0.05%	0.05%
Fungus Resistance	ASTM G21	(No growth)	(No growth)	(No growth)	(No growth)
Mold Growth On Surface	ASTM D3273*	10	10	10	10

*When tested by an independent laboratory per ASTM D3273 ("Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber"), PermaBase achieved a panel score of 10, the highest score possible, indicating no mold growth under the laboratory test conditions. The use of PermaBase in actual installations may not produce the same results as were achieved in controlled laboratory conditions. No material can be considered "mold proof," nor is it certain that any material will resist mold indefinitely.

SIZES AND PACKAGING

Size: Thickness, Width And Length	# Of Pcs Per Unit
PermaBase Cement Board	
1/2" x 32" x 5' (12.7 mm x 813 mm x 1524 mm)	50
1/2" x 32" x 8' (12.7 mm x 813 mm x 2438 mm)	30

Lighter, Faster And Easier

When You Want The Best Lightweight Rigid Substrate: PermaBase BRAND PLUS Cement Board

This board has the same exceptional qualities built into PermaBase Cement Board but weighs 25% less. When you need to lighten your load, consider PermaBase PLUS for all interior and exterior applications.

Resists Moisture Better

- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Achieves the industry's lowest water-absorption rating (ASTM C473) – offering better installation.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong And Lasts Long

- Resists impact and remains dimensionally stable – extending the life of your project.
- Holds up to the toughest conditions.

Installs Fast And Easy

- Lightweight and easy to cut – speeding up installation.
- Reduces jobsite waste – easier, cleaner cut.
- Patented EdgeTech[MD] Technology allows for a closer edge fastening and reduces damage from handling.

Works For Interior And Exterior Projects

– One Panel, Many Applications

- Great for all interior applications, as well as exterior decks and outdoor kitchens.
- Meets UL & ULC classifications for one- and two-hour fire-rated assemblies.
- Building code approved – one substrate that does the job of many.
- Adhere tile, stone or thin brick directly to PermaBase PLUS in exterior applications – saving time and money.
- Durable substrate for direct-applied coating systems.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.
- 15-Year Limited Warranty: Exterior applications.

PermaBASE BRAND PLUS® Cement Board

SIZES AND PACKAGING

Size: Thickness, Width And Length	# Of Pcs Per Unit
7/16" x 36" x 5' (11.1 mm x 914 mm x 1,524 mm)	60
1/2" x 48" x 8' (12.7 mm x 1,219 mm x 2,438 mm)	40
5/8" x 48" x 8' (15.9 mm x 1,219 mm x 2,438 mm)	32

For installation instructions and accessories, see page 12.

Smoother, Stronger, More Stable

When You Want The Best Rigid 1/4-Inch Underlayment That Buys You More Open Time: PermaBase BRAND UltraBacker Cement Board

UltraBacker features a smooth mesh and mat surface. The 1/4-inch thickness eliminates the need to modify adjacent thresholds when abutting it to carpet, hardwood and other common flooring materials.

Resists Moisture Better Than Any Other Cement Board

- Features the *lowest water-absorption rating of <8%* (ASTM C473) – offering better installation.
- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong And Lasts Long

- Resists impact and remains dimensionally stable – extending the life of your project.
- Holds up to the toughest conditions.
- 30% stronger and four times more rigid than competitive 1/4-inch cement board.

Installs Fast And Easy

- Can be applied over new or existing countertops or as a flooring underlayment – pre-manufactured panels save you time.
- Reduces jobsite waste – easier, cleaner cut.
- Patented EdgeTech[MD] Technology allows for a closer edge fastening and reduces damage from handling.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.

PermaBASE BRAND ULTRA BACKER Cement Board

SIZES AND PACKAGING

Size: Thickness, Width And Length	# Of Pcs Per Unit
1/4" x 36" x 5' (6.4 mm x 914 mm x 1524 mm)	60

For installation instructions and accessories, see page 12.

PermaBase BRAND Flex Cement Board

Easy To Bend, Yet Stays Strong

When You Want The Best Substrate That Bends Like No Other: PermaBase[MD] BRAND Flex Cement Board

This very flexible PermaBase substrate is ideal to use around archways, columns, beams, or anywhere you need an evenly curved surface. Consider this also for radius shower walls, tub step-ups and stair construction – the possibilities are almost endless.

Resists Moisture Better

- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Achieves the industry's lowest water-absorption rating (ASTM C473) – offering better installation.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong Yet Flexes Like No Other Cement Board

- Holds up to the toughest conditions yet bends like no other.
- Resists impact and remains dimensionally stable – extending the life of your project.

Installs Fast And Easy

- Pre-manufactured panels save you time.
- Bends easily – 6" radius at 90°.
- Reduces jobsite waste – easier, cleaner cut.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.
- 15-Year Limited Warranty: Exterior applications.

Installation

Installation recommendations for PermaBase Flex are the same as for PermaBase Cement Board with this exception: framing must be spaced a maximum of 8"o.c. (See page 12 for more information.)

Limitations

PermaBase Flex has the same limitations as PermaBase with the following additions:

- For convex surfaces, PermaBase Flex must be applied with the rough surface and tapered edges exposed.
- For concave surfaces, PermaBase Flex must be applied with the smooth surface exposed.
- PermaBase Flex Cement Board should not be used for fire-rated assemblies.
- Maximum framing spacing should not exceed 8"o.c.
- Maximum fastener spacing should not exceed 8"o.c. for wall and 6"o.c. for ceiling applications.

PermaBASE BRAND FLEX® Cement Board

SIZES AND PACKAGING

Size: Thickness, Width and Length	# Of Pcs Per Unit
1/2" x 36" x 6' (12.7 mm x 914 mm x 1829 mm)	25
1/2" x 48" x 8' (12.7 mm x 1219 mm x 2438 mm)*	30

* Special Order

For installation instructions and accessories, see page 12.

Installation Guide

Interior Applications

An ideal substrate for interior applications, such as:

- Shower and tub enclosures
- Garden/whirlpool tubs
- Countertops
- Backsplashes
- Steamrooms and saunas
- Swimming pool and whirlpool decks and enclosures
- Floor underlayment
  - Entryways
  - Kitchens
  - Bathrooms
  - Foyers
  - Laundry rooms

Installation

General: All framing should comply with local building code requirements and be designed to provide support with a maximum allowable deflection of L/360 under all intended loads. Framing members should be spaced a maximum of 16" o.c.

Cut or score PermaBase on printed side of panel. Use a straightedge and pencil to mark line. Use utility knife to score/cut the glass mesh. Snap the board and cut through the now visible glass mesh on the other side. Install tile and tile setting materials in accordance with current ANSI specifications and Tile Council of North America (TCNA) guidelines.

Control Joints: For interior installations, allow a maximum of 30 lineal feet between control joints. A control joint must be installed but not limited to the

following locations: where expansion joints occur in the framing or building (discontinue all cross furring members located behind joint); when boards abut dissimilar materials; where framing material changes; at changes of building shape or structural system; at each story separation. Place control joints at corners of window and door openings, or follow specifications of architect. Control joint cavity shall not be filled with coating or other materials.

Walls And Ceilings

Wall Framing: Edges of PermaBase parallel to framing should be continuously supported. Provide additional blocking when necessary to permit proper PermaBase attachment.

Do not install PermaBase directly over protrusions from stud plane, such as heavy brackets and fastener heads. Studs above a shower floor should either be notched or

Installation Accessories

For a seamless installation, we recommend PermaBase[MD] Tape and PermaBase[MD] Screws.

Fasteners

PermaBase corrosion resistant screws or equivalent, 1-1/4" or 2" long, for use with wood framing. Type S-12 screws or equivalent, 1-1/4" or 1-5/8" long, for use with 20 gauge or heavier steel framing.

Galvanized roofing nails, 1-1/2" long with hot dipped galvanized coating for use with wood framing. Nails should meet Federal Specification #FF-N105B/type 2 style 20.

Joint Reinforcement

PermaBase mesh tape must be used on all edges and cuts made to size. Use 2" wide polymer-coated (alkali resistant) mesh tape for interior applications and 3" wide polymer-coated (alkali resistant) mesh tape for exterior applications.

Bonding Materials

Treat joint and set facing material, preferably with latex-Portland cement mortar or with dry-set (thin-set) mortar. All mortars should comply with ANSI A118.1, A118.4 or A118.15 standards. Type 1 organic adhesive meeting ANSI A-136.1 may be utilized for interior use only.

furred to accommodate the thickness of the waterproof membrane or pan. The surround opening for a tub or precast shower receptor should not be more than 1/4" longer than unit to be installed.

Ceiling Framing: The deflection of the complete ceiling assembly due to dead load (including insulation, PermaBase, bonding material and facing material) should not exceed L/360. The dead load applied to the ceiling frame should not exceed 10 psf. Ceiling joist or furring channel should not exceed 16" o.c. (Edges of PermaBase parallel to framing should be continuously supported.) Provide additional blocking when necessary to permit proper PermaBase attachment.

PermaBase Cement Board: Apply PermaBase with ends and edges closely butted but not forced together. Stagger ends joints in successive courses. Drive fasteners into field of cement board first, working toward ends and edges. Space fasteners maximum 8" o.c. for walls, 6" o.c. for ceilings with perimeter fasteners at least 3/8" and less than 5/8" from ends and edges. Ensure PermaBase is tight to framing.

Fasteners must be installed into framing members. Select proper fastener type and length for the application.

Joint Reinforcement: Trowel bonding material to completely fill the tapered recessed board joints and gaps between each panel. On non-tapered joints apply a 6" wide, approx. 1/16" thick coat of bonding material over entire joint. For all joints, immediately embed 2" alkali resistant fiberglass mesh tape fully into applied bonding material and allow it to cure. For outside corners, 3" wide mesh tape is recommended. Same bonding material should be applied to corners, control joints, trims and other accessories. Feather bonding material over fasteners to fully conceal.

Divider Wall Installation

1. **PermaBase Cement Board**
2. **Membrane**
3. **Latex-Portland Cement Mortar**
4. **Alkali-Resistant Mesh Tape**

Shower Installation

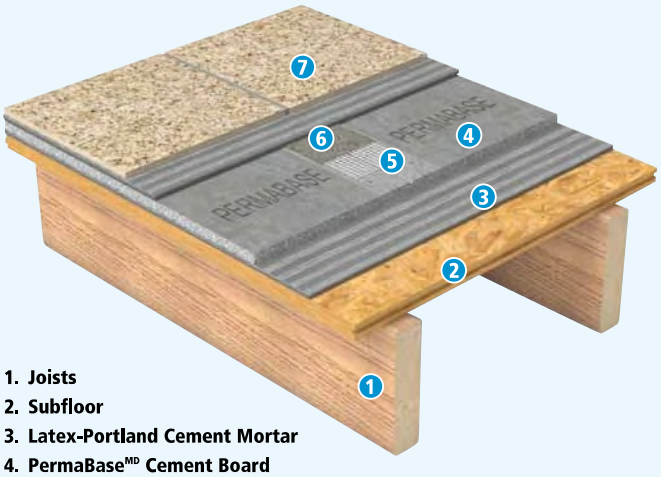
1. **Support Framing 1/4" / 12" slope toward drain**
2. **Plywood, Min. 1/2"**
3. **PermaBase[MD] Cement Board**
4. **Membrane**
5. **Latex-Portland Cement Mortar**
6. **Alkali-Resistant Mesh Tape**
7. **Sealant**
8. **Tile and Grout**

Floors And Counters

Subfloor Or Base: For flooring applications with 16" o.c. floor joists, 5/8" tongue and groove exterior grade plywood or 3/4" tongue and groove exterior grade OSB may be used. For 19.2" o.c. and 24" o.c. floor joists, 3/4" tongue and groove exterior grade plywood or OSB must be used. Tile size for floors with 24" o.c. floor joists must be 12" x 12" or larger. The joist and subfloor assembly must meet L/360 as well as the appropriate code tables for live and dead loads.

Underlayment: Using a 1/4" square-notched trowel, apply a setting bed of polymer-modified mortar (or thin-set mortar) to the subfloor or counter base. Immediately laminate PermaBase to subfloor or base leaving a 1/8" space between boards at all joints and corners. Leave a 1/4" gap along walls. Stagger all joints so that they do not line up with underlying substrate joints. Fasten PermaBase every 8" o.c. throughout board field and around all edges while setting bed mortar is still workable. Around perimeter of each board, locate fasteners 2" from corners and not less than 3/8" from the edges. Fill all joints solid with bonding material. On non-tapered joints such as butt ends, apply a 6" wide, 1/16" thick coat over the entire joint. For all joints, immediately embed 2" fiberglass mesh tape fully into applied bonding material; ensure that tape is centered over joint. Apply bonding material over fasteners to fully conceal. Remove all excess bonding material and allow to cure.

Limitations



- Joints should be treated with alkali resistant fiberglass mesh tape set in a polymer modified mortar.
- Conventional paper drywall tape, joint compound and drywall nails or screws should not be used.
- Maximum wall framing spacing should not exceed 16" o.c. and must be designed to limit deflection to L/360 under all live and dead loads.
- Steel framing must be 20 gauge (galvanized) or heavier – 16" o.c.
- 1/4" PermaBase and 1/4" UltraBacker should not be used on walls or ceilings.
- PermaBase is not a water barrier. Consult local building code for moisture barrier requirements.
- Not recommended for use with vinyl flooring or carpets.
- For exterior and interior finishes applied directly to PermaBase, reinforcing mesh must be embedded in basecoat. Consult finish manufacturer for additional requirements.
- PermaBase should not be exposed to temperatures over 220°F (105°C).
- PermaBase is not a nailing base for other finishes.

Countertop Installation

1. **Plywood**
2. **Latex-Portland Cement Mortar**
3. **PermaBase^{MD} Cement Board**
4. **Fiberglass Mesh Tape (Alkali-Resistant) Embedded in Mortar**
5. **Latex-Portland Cement Mortar**
6. **Tile and Grout**

Floor Underlayment

1. **Joists**
2. **Subfloor**
3. **Latex-Portland Cement Mortar**
4. **PermaBase^{MD} Cement Board**
5. **Fiberglass Mesh Tape (Alkali-Resistant)**
6. **Latex-Portland Cement Mortar**
7. **Tile**

Exterior Applications

An ideal substrate for exterior applications such as:

- Tile applications
- Stucco applications
- Cement board stucco
- Thin brick
- Adhered stone veneer
- Thin porcelain tile
- Ventilated rainscreen facade
- EIFS
- Soffit panels
- Sheathing panels
- Outdoor kitchens/grills

Installation

General: All framing should comply with local building code requirements and be designed to provide support with a maximum allowable deflection of L/360 under all intended live including wind) and dead loads.

Some applications may require stricter deflection requirements. Consult finish manufacturer for recommendations.

Note: Cut or score PermaBase on rough side of panel.

Control Joints: For exterior installations, allow a maximum of 16 lineal feet between control joints. Consult finish manufacturer for other requirements. For exterior tile applications, control joints should be spaced a maximum of every 12'. A control joint must be installed but not limited to the following locations: where expansion joints occur in the framing or building (discontinue all cross furring members located behind joint); when boards abut dissimilar materials; where framing material changes; at changes of building shape or structural system; at each story separation. Place control joints at corners of window and door openings, or follow specifications of architect. Control joint cavity shall not be filled with coating or other materials.

Walls And Ceilings

Wall Framing: Studs should be spaced a maximum of 16" o.c. Edges/ends of PermaBase parallel to framing should be continuously supported. Provide additional blocking when necessary to permit proper PermaBase attachment. Do not install PermaBase directly over protrusions from stud plane such as heavy brackets or fastener heads.

Ceiling Framing: The deflection of the complete ceiling assembly due to dead load (including insulation, PermaBase, bonding material and facing material) should not exceed L/360. The dead load applied to the ceiling frame should not exceed 10 psf. Ceiling joist or furring channel should not exceed 16" o.c. (Edges of PermaBase parallel to framing should be continuously supported.) Provide additional blocking when necessary to permit proper PermaBase attachment.

Water Barrier: While PermaBase is unaffected by moisture, a Water/Air Resistive Barrier (WRB) must be installed to protect the cavity. The type and specific placement or location of the water barrier will vary based on local building codes and/or manufacturers warranties. Consult the WRB manufacturer's recommendations for specific installation guidelines.

PermaBase Cement Board: Apply PermaBase with ends and edges closely butted but not forced together. Stagger end joints in successive courses. Drive fasteners into field of cement board first, working toward ends and edges. Space fasteners maximum 8" o.c. for walls, 6" o.c. for ceilings with perimeter fasteners at least 3/8" and less than 5/8" from ends and edges.

Joint Reinforcement: Trowel bonding material to completely fill the tapered recessed board joints and gaps between each panel. On non-tapered joints apply a 6" wide, approximately 1/16" thick coat of bonding material over entire joint. For all joints, immediately embed 3" alkali resistant fiberglass mesh tape fully into applied bonding material and allow to cure. Same bonding material should be applied to corners, control joints, trims or other accessories. Feather bonding material over fasteners to fully conceal.

Decks

Subfloor: Plywood should be securely glued and fastened to floor joists spaced a maximum of 16"o.c. Subfloor should be sloped at a minimum pitch of 1/4" per foot. The floor surface should be true to plane within 1/8" in 10'.

Underlayment: Using a 1/4" square-notched trowel, apply a setting bed of Latex-Portland cement mortar to the subfloor. Immediately laminate PermaBase to subfloor leaving a 1/8" space between boards at all joints and corners. Leave a 1/4" gap along walls. Stagger joints so they do not line up with underlying substrate joints. Fasten PermaBase every 8" o.c. throughout board field and around all edges while setting bed mortar is still workable. Around perimeter of each board, locate fasteners 2" from the corners and not less than 3/8" from the edges. Fill all joints solid with bonding material. On non-tapered joints such as butt ends, apply a 6" wide, 1/16" thick coat over the entire joint. For all joints, embed alkali-resistant fiberglass mesh tape fully into applied bonding material; ensure that tape is centered over joint. Apply bonding material over fasteners to fully conceal. Remove all excess bonding material and allow it to cure.

Waterproof Membrane: Trowel apply waterproof membrane to the entire surface of the cement board, following membrane manufacturer's installation instructions in detail.

Water-Managed, High-Impact Resistant Wall System

Cement Board Ventilated Rainscreen Façade System

Description

The Cement Board Ventilated Rainscreen Facade System is a water managed exterior cladding wall system designed to provide increased high impact and weather resistance and improved dimensional stability.

The Cement Board Ventilated Rainscreen Facade System combines the strength and durability of PermaBase Cement Board with the performance and beauty of reinforced base coats and textured finishes. It includes specific components such as wood or metal furring, latex-modified Portland cement base coat, glass fiber mesh, trims, primer and acrylic textured finish coat. It provides unequaled protection against water penetration and weathering.

The Cement Board Ventilated Rainscreen Facade System allows you to enclose and finish a project in as little as two days, speeding occupancy. It has already been satisfactorily used for over 25 years on thousands and thousands of square meters of exterior walls.

Uses

For all your exterior walls needing high-impact and weather resistance in commercial, institutional and residential applications.

Advantages

Durability/Strength: PermaBase Cement Board provides an exceptionally hard, durable surface that is able to withstand prolonged exposure to moisture and has a proven durability in cold climates.

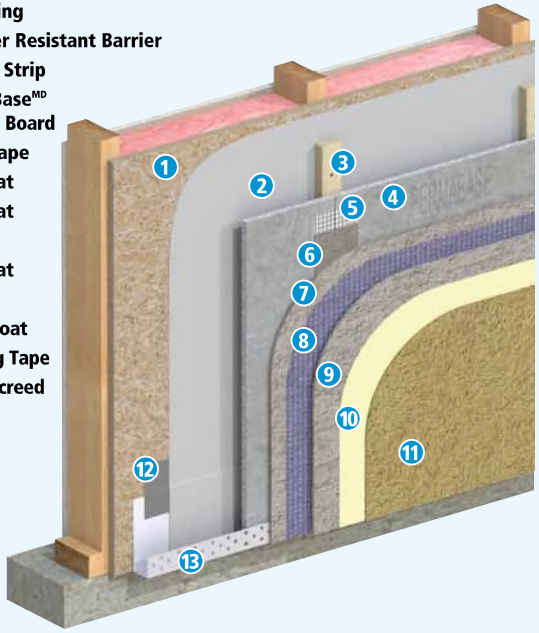
PermaBase offers a competitive advantage over similar products on the market with its patented EdgeTech[MD] technology. The tapered, reinforced edge design allows for closer nail or screw application to the edge.

Weather Resistance: Acrylic finishes repel weather at the system's surface.

Water-Managed Design: The water-managed design of the system provides positive drainage directly behind the cladding, enabling the escape of incidental water that might enter around or through window or door openings and penetrate behind the cladding in frame construction. It also provides air pressure equilibrium, minimizing the chances of water being driven into the wall cavity by incidental building envelope pressure differential.

Design Options: Cement Board Stucco provides the popular stucco look, including the attachment of special pre-molded shapes and a wide variety of finish texture and color options in standard colors and custom colors.

Contact exterior coatings manufacturer for color and installation instructions.



Some exterior wall assemblies including the PermaBase boards were tested according to CAN/ULC-S101. Consult ULC's online directories for details.

Limitations

- Boards shall never be fastened directly on studs.
- Thin veneer construction will tend to reveal planar irregularities in the frame construction.
- Minor cracking at joints might become visible in the finished exterior surface.
- For exterior finishes applied direct to PermaBase, reinforcing mesh must be embedded in basecoat. Consult Unifix's website to get the latest exterior cladding system complete architectural specifications and for detailed installation instructions.
- The cavity between the PermaBase Cement Board and the intermediate sheathing or the insulation board must allow for venting to the exterior, at the bottom and at the top of the wall, in order to provide efficient water drainage and humidity management.

Cement Board Masonry Veneer Wall System (CBMV)

PermaBase as a component of CBMV Systems

The use of adhered manufactured stone and thin brick masonry veneers is increasing in popularity. Cement Board Masonry Veneer Wall Systems (CBMV) have been designed to offer complete, engineered solutions for the installation of manufactured and natural stone masonry veneer, as well as thin brick veneers.

These systems have been developed and are marketed by various manufacturers of the adhering materials used to install them as well as the veneer manufacturers themselves. CBMV Systems offer increased performance by utilizing polymer modified adhesive mortars which have been designed for hanging materials versus type S and N mortars that were primarily designed for stacking materials. In some cases these systems offer warranties.

Several of these systems call for the use of an ASTM C1325 cement board. In addition to meeting this requirement, the features and benefits of PermaBase Cement Board make it an ideal component for use in these systems.

Advantages

Durability/Strength: PermaBase Cement Board provides an exceptionally hard, durable surface that is able to withstand prolonged exposure to moisture and has a proven durability in cold climates.

Consistency: PermaBase is produced in a factory controlled environment which provides for a consistent product produced within tighter tolerances than can be achieved with field fabricated substrates.

Cutting and Handling: PermaBase is produced with its patented EdgeTech technology. The tapered, reinforced edge design allows for fastening of nails or screws closer to the edge without crumbling or spinout. The homogeneous core provides a very clean score and snap using a standard drywall knife.

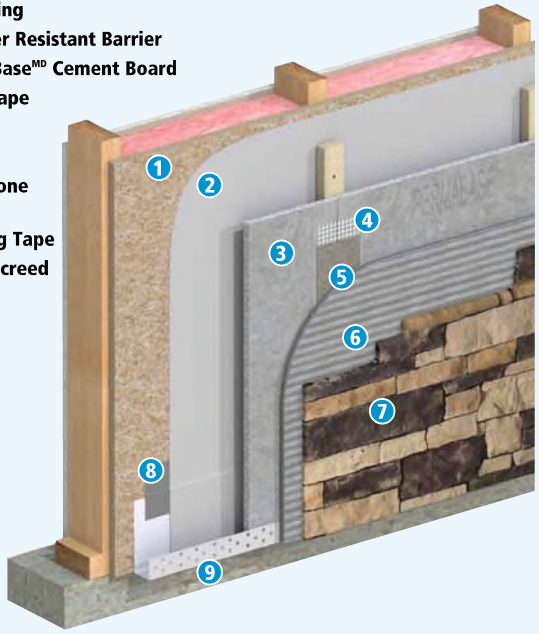
Low Water Absorption: PermaBase has the lowest water absorption of any cement board which provides greater open time and increased workability of the adhering materials used in the application of veneer products.

Limitations

The system shall be engineered to withstand all applicable loads, including live, dead, seismic, positive and negative, etc. CBMV Systems utilize a primary sheathing beneath the PermaBase Cement Board to provide required structural performance. The selection and installation of this sheathing varies according to the type of wall construction.

In the case of exterior walls only, the CBMV Wall System shall not exceed 3 meters (9.8') in height above the foundation walls. Do not use the CBMV System to make soffits or use underground or in frequently submerged areas. Make sure to follow the latest national, provincial or local building code regulations.

Consult Unifix's website to get the latest exterior cladding system complete architectural specifications and for detailed installation instructions.



The details provided give a general sense of representative CBMV Systems only.

Water Resistant Barriers (WRB)

While PermaBase is unaffected by moisture, a water resistant barrier (WRB) must be installed to protect the cavity. One of the advantages of CBMV Systems is the ability to incorporate an effective, accountable water management system. The type and specific placement of the water barrier will vary based on local building codes and/or manufacturers warranties.

This section of the PermaBase Construction Guide provides information on how to utilize PermaBase within both a CBMV System and a Ventilated Rainscreen Facade System. While some typical examples are shown (right) for reference purposes, the specifications and details on how to design and construct individual systems should be obtained from the design professional, or the adhering material or veneer manufacturer of the materials that are being used to complete the system.

For more information go to: **unifixinc.com/applications**

Heat Shield Applications

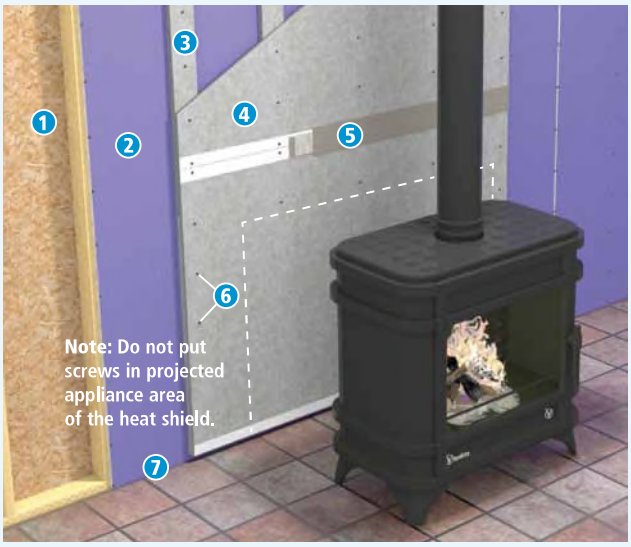
Features/Benefits

- Protects walls and floors.
- Reduces clearance in back up to 40%.
- Lightweight and easy to install.
- CAN/ULC- S632 & UL1618 tested.

Limitations: Do not apply combustible finishes, such as wallpaper, on the panel surface.

Installation

The heat shield made with PermaBase boards can reduce the required clearance between a heat producing appliance and the wall by up to 40%, except where the clearance includes provision for access or ventilation.



Furring is made by cutting a full PermaBase panel into 4" (100 mm) wide strips. Attach a double layer of these furring strips to the wall studs using cement board screws which provide a minimum penetration of 3/4" (19 mm) into the framing. When installing the panels, leave a minimum 2" (50 mm) gap at the ceiling and a 1"- 2" (25-50 mm) gap at the floor.

Fasten the PermaBase panels to the studs with galvanized roofing nail or cement board screws spaced 8" (200 mm) o.c. Be sure your cement board screws are long enough to go through the furring and into the studs at least 3/4" (19 mm). Do not put any nails or screws into the wall area directly behind the proposed location of the appliance.

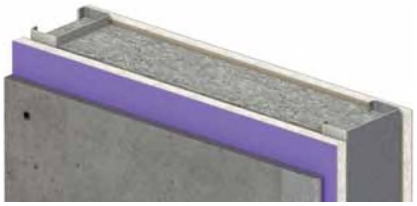
Finish the joints with polymer modified Portland cement mortar and alkali resistant fiberglass tape. Cover fasteners with the same mortar. The mortar should be dry before applying any decorative coating.

Heat build-up is reduced by allowing air to enter and exit the cavity between the wall and the heat shield. This air space is required for the good functioning of the heat shield. Do not close or block these openings.

Heat Shield Installation

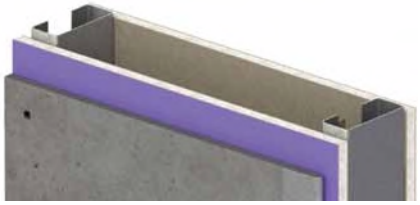
1. **Studs Spaced 16 in. o.c.**
2. **Existing Gypsum Board**
3. **Two Layers 4 in. wide Furring Strips**
4. **PermaBase[MD] Heat Shield**
5. **Joint Treatment**
6. **Fasteners Spaced 8 in. o.c. Maximum**
7. **1-2 in. Minimum Clearance from the Floor**

PermaBase[MD] heat shielding permits clearance reduction up to 40 percent of the manufacturer's suggested clearance.



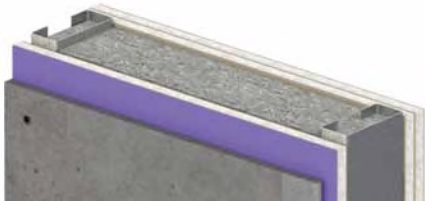
UL Listed PermaBase[MD] Cement Board Partitions – Steel Framing

1-hour Fire Rating
V452 UL Design



7/16" PermaBase PLUS or 1/2" PermaBase applied vertically or horizontally to one side of 3-5/8" steel studs 16" o.c. 5/8" Fire-Shield Gypsum Board applied vertically to opposite side. 3" mineral wool insulation in stud cavities.

1-hour Fire Rating
U425 UL Design



7/16" PermaBase PLUS or 1/2" PermaBase applied vertically or horizontally over 5/8" Fire-Shield Gypsum Board applied vertically to each side of 3-1/2", 20-gauge steel studs 16" o.c. PermaBase secured to studs with cement board screws of adequate length to penetrate studs 3/8" spaced 8" o.c.

1-hour Fire Rating
V438 UL Design

7/16" PermaBase PLUS or 1/2" PermaBase applied vertically or horizontally over 5/8" Fire-Shield Gypsum Board applied vertically to each side of 3-5/8" steel studs 16" o.c. PermaBase secured to studs with cement board screws of adequate length to penetrate studs 3/8" spaced 8" o.c.

2-hour Fire Rating
V452 UL Design

7/16" PermaBase PLUS or 1/2" PermaBase applied vertically over 1/2" Fire-Shield C or 5/8" Fire-Shield Gypsum Board, applied vertically to one side of 3-5/8" steel studs 16" o.c. 2 layers 1/2" Fire-Shield C or 5/8" Fire-Shield Gypsum Board applied vertically to opposite side. 3" mineral wool insulation in stud cavities.

PermaBase Over Foundation Walls

Installation

The 1/2" PermaBase boards can be installed below ground level over extruded polystyrene boards that are themselves installed over a foundation wall, under the following conditions.

1. That the PermaBase boards be fully supported, over their entire surface, by the polystyrene boards.

2. That the PermaBase boards be installed using our specially designed PermaBase screws, every 8" o.c. (200 mm), over furring channels (wood or galvanized metal 20 gauge or thicker) that comply with the following requirements:

a. That the furring strips be spaced at a maximum of 24" (610 mm) o.c.

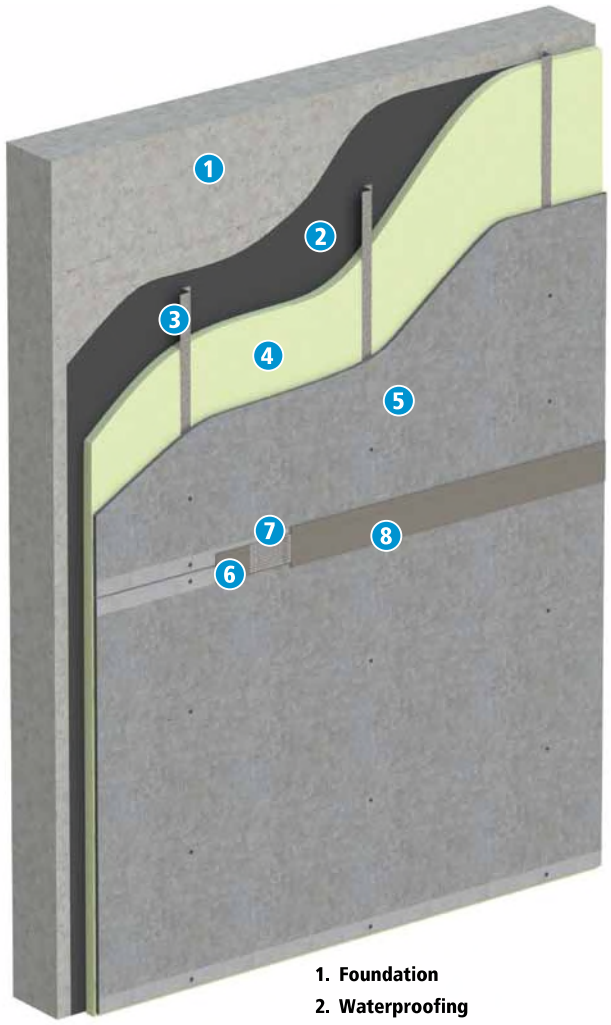
b. That the furring strips have the same thickness (or depth) as the polystyrene board.

c. That the furring strips be in full contact with the foundation wall.

d. That the furring strip be affixed to the foundation wall with the proper fasteners and in sufficient number to provide an adequate support for the board, its finish and other building loads.

e. That the furring strips be corrosion or rot proof.

3. That the extruded polystyrene boards be approved for exterior use, below ground and that they have a compressive strength of 20 psi (140 kPa) or higher when tested according to ASTM D1621.



4. That the PermaBase boards are installed below ground at a maximum depth of 10' (3 m).

5. That the water table level be at all times be below the base of the foundation wall.

6. That the base of the foundation wall be properly drained in order to avoid any accumulation of water and consequently an added pressure on the wall.

7. That the wall design be in conformance with the applicable and most up to date local, provincial, and federal building codes where the project is located.

Limitations: The PermaBase boards are resistant to water but are not water impermeable or waterproof and cannot be considered a vapor barrier. Where a wall or cavity must be kept dry, use proper water resistant membranes, in conformance with the applicable and most up to date local, provincial, and federal building codes where the project is located. Some waterproofing compounds, sealants, or adhesives may contain solvents or petroleum distillates. These may damage the polystyrene. Please contact the manufacturers of these products to verify their compatibility with polystyrene and concrete. The PermaBase boards are not structural boards.

LIMITED WARRANTY AND REMEDIES

Products manufactured and sold by National Gypsum Company are warranted by National Gypsum Company to its customers to be free from defects in materials and workmanship at the time of shipment. THIS EXPRESS WARRANTY IS THE ONLY WARRANTY APPLICABLE TO SUCH PRODUCTS, AND IS IN LIEU OF AND EXCLUDES ALL OTHER EXPRESS ORAL OR WRITTEN WARRANTIES AND ALL IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

National Gypsum Company will not be liable for any incidental, indirect or consequential losses, damages or expenses. The customer's exclusive remedy for any type of claim or action for defective products will be limited to the replacement of the products (in the form originally shipped) or, at National Gypsum's option, to a payment or credit not greater than the original purchase price of the products.

National Gypsum Company will not be liable for products claimed to be defective where the defect resulted from causes not within National Gypsum's control, or which arose or occurred after shipment, including but not limited to accidents, misuse, mishandling, improper installation, contamination or adulteration by other materials or goods, or abnormal conditions of temperature, moisture, dirt or corrosive matter.

Any claim that products sold by National Gypsum Company were defective or otherwise did not conform to the contract of sale is waived unless the customer submits it in writing to National Gypsum within thirty (30) days from the date the customer discovered or should have discovered the defect or nonconformance. No legal action or proceeding complaining of goods sold by National Gypsum may be brought by the customer more than one year after the date the customer discovered or should have discovered the defect or problem of which it complains.

Mold And Mildew Resistance

PermaBase was designed to provide extra protection against mold and mildew. When tested by an independent laboratory, PermaBase received the highest possible ratings on ASTM G21 and D3273. The use of PermaBase in actual installations may not produce the same results as were achieved in controlled laboratory conditions. No material can be considered "mold-proof," nor is it certain that any material will resist mold or mildew indefinitely. When used in conjunction with good design, handling and construction practices, PermaBase can provide increased mold resistance. As with any building material, avoiding water exposure during handling, storage and installation, and after installation is complete, is the best way to avoid the formation of mold or mildew.

Section 2: Hazards Identification

United States (US)
According to OSHA 29CFR 1910.1200 (HCS)

GHS Classification of the substance or mixture
Carcinogenicity - Category 1A - (H-350)
Specific target organ toxicity, repeated exposure – Category 1 (H-372)
Acute toxicity, inhalation - Category 4 (H-332)
Skin corrosion/irritation Category 2 (H315)
Serious eye irritation – Category 2A (H-319)

GHS Label Elements
Pictogram

Signal Word **Danger**

Hazard Statements

H-350	May cause cancer.
H-332, 372	Harmful if inhaled. Causes damage to organs (lungs) through prolonged or repeated exposure.
H-315, 319	Causes skin irritation and serious eye irritation

Precautionary Statements
Prevention
Obtain special instructions before use.
Do not handle until all safety precautions have been read and understood.
Do not breathe dust.
Use personal protective equipment as required. (See Section 8)
Use engineering controls and wet methods to minimize dust.

Section 2: Hazards Identification (Continued)

Response
If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing.
If on skin, wash with plenty of soap and water. If skin irritation occurs, get medical attention.
If in eyes, rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
Get medical attention if exposed or concerned.

Storage
Store material in a cool, dry, ventilated area, away from excessive heat or sunlight.

Disposal
Dispose of material in accordance with federal, state, and local regulations.

Section 3: Composition/Information on Ingredients

Chemical Name	Common name/ Synonym	Identifiers CAS Number	% (weight)	Impurities
Silicon Dioxide (SiO_2)	Sand, quartz	14808-60-7	<50	
In CANADA- Calcium Carbonate	Limestone, industrial sand	1317-65-3	<50	Crystalline silica (CAS # 14808-60-7)
Mixture-calcium and aluminum silicates	Portland Cement	65997-15-1	<25	Crystalline silica (CAS # 14808-60-7)
Mixture-silicates, aluminates	Pozzolan, fly ash	68131-74-8	<25	Crystalline silica (CAS # 14808-60-7)
Mixture-calcium aluminates	High Alumina Cement	65997-16-2	<6	Crystalline silica (CAS # 14808-60-7)
Mixture-calcium, aluminum silicates, amorphous silica	Fiberglass scrim or fiberglass mat laminate	65997-17-3	<5	
Calcium Hydroxide	Hydrated lime	1305-62-0	<2	Crystalline silica (CAS # 14808-60-7)

Section 4: First-Aid Measures

Inhalation Remove exposed individual to fresh air immediately. If breathing difficulty persists, seek medical attention.

Eye contact Do not rub or scratch eyes. Immediately flush eyes with water for 15 minutes.
Remove contact lenses (if applicable). Seek medical attention if irritation persists.

Skin contact Flush and wash skin with soap and water. Utilize lotions to alleviate dryness if present. Seek medical attention if irritation persists.

Ingestion This product is not expected to be hazardous and no harmful effects are expected upon ingestion of small amounts. Larger amounts may cause abdominal discomfort or possible obstruction of the digestive tract. Seek medical attention if problems persist.

Medical Conditions aggravated by exposure
Pre-existing upper respiratory and lung diseases such as, but not limited to, bronchitis, emphysema and asthma. Pre-existing skin diseases such as, but not limited to, rashes and dermatitis.

Most important symptoms/effects, acute and delayed: See Section 11. (Toxicological Information)

Section 5: Fire-Fighting Measures

Extinguishing Media
Dry chemical, foam, water, or extinguishing media appropriate for surrounding fire.

Unusual Fire and Explosion Hazards
Mixture poses no fire-related hazard.

Special hazards arising from the mixture
None known

Special Protective Equipment and Precautions for Firefighters
A SCBA is recommended to limit exposures to combustion products when fighting any fire.

Section 6: Accidental Release Measures

Personal precautions, protective equipment and emergency procedures
Product is an article composite.
General recommendations:
Wear appropriate Personal Protective Equipment. (See Section 8)
Maintain proper ventilation.

Environmental precautions
This product could be toxic to fish due to its high alkalinity from the Portland Cement.
Dispose of in accordance with applicable federal, state, and local regulations.

Methods and materials for containment and cleaning up
Pick-up larger pieces to avoid a tripping hazard.
Sweep or vacuum remaining material into a waste container for disposal.
Use a light water spray to minimize dust generation.

Section 7: Handling and Storage

Precautions for safe handling
Avoid breathing dust.
Minimize generation of dust.
Provide appropriate exhaust ventilation at places where dust is formed.
Avoid contact with eyes, skin and clothing.
Wear recommended personal protective equipment when handling. (See Section 8)

Conditions for safe storage, including any incompatibilities
Store material in a cool, dry, ventilated area, away from excessive heat or sunlight.
Store panels flat to minimize damage.
Do not stack panels too high when storing to minimize the risk of falling.
Avoid contact with strong acids.

Section 8: Exposure Controls/Personal Protection

Control Parameters

	Exposure Limits	
Component	**OSHA PEL (mg/m3)**	**ACGIH TLV (mg/m3)**
Portland Cement	15 (T) 5 (R)	10 (T)
High Alumina Cement	15 (T) 5 (R)	10 (T)
Pozzolan	15 (T) 5 (R)	10 (T)
Sand	[(10) / (%SiO2+2)] (R); [(30) / (%SiO2+2)] (T)	0.025 (R)
Crystalline Silica (Quartz)[1]	[(10) / (%SiO2+2)] (R); [(30) / (%SiO2+2)] (T)	0.025 (R)
Fiberglass Scrim	15 (T) 5 (R)	1 f/cc (R)
Calcium Hydroxide (Hydrated Lime)	15 (T) 5 (R)	5 (R)
Calcium Carbonate	15 (T) 5 (R)	10 (T)

1 – Present as an impurity in raw materials
T- Total Dust
R- Respirable Dust

Exposure Controls

Appropriate Engineering Controls

Work/Hygiene Practices: Utilize methods to minimize dust production. Utilize wet methods, when appropriate, to reduce generation of dust.

Ventilation: Provide local and general exhaust ventilation sufficient to maintain a dust level below the PEL/TLV.

Personal Protective Equipment

Respiratory Protection

A NIOSH approved particulate respirator is recommended in poorly ventilated areas or if the PEL/TLV is exceeded. OSHA's 29 CFR 1910.134 (Respiratory Protection Standard) must be followed whenever work conditions require respirator use.

Eye Protection

Safety glasses or goggles.

Skin

Gloves, protective clothing and/or barrier creams may be utilized if conditions warrant.

Section 9: Physical and Chemical Properties

(a) Appearance: Gray solid
(b) Odor: Slight organic odor upon opening that dissipates quickly.
(c) Odor threshold: Not available
(d) pH : ~12
(e) Melting point/freezing point: Not Available
(f) Initial boiling point and boiling range: Not Available
(g) Flash point: Not available
(h) Evaporation rate: Not available
(i) Flammability (solid, gas): Not flammable
(j) Upper/lower flammability or explosive limits: Not available
(k) Vapor pressure: Not available
(l) Vapor density: Not available
(m) Relative density: ~1.2
(n) Solubility(ies): Slightly soluble in water
(o) Partition coefficient: n-octanol/water: Not available
(p) Auto-ignition temperature: Not available
(q) Decomposition temperature: Unknown
(r) Viscosity: Not available
(s) VOC (Volatile Organic Compound): N/A

Section 10: Stability and Reactivity

(a) Reactivity: No data available
(b) Chemical stability: Stable in dry environments
(c) Possibility of hazardous reactions: None known
(d) Conditions to avoid (e.g., static discharge, shock, or vibration): Contact with strong acids.
(e) Incompatible materials: Strong acids
(f) Hazardous decomposition products: None known.

Section 11: Toxicological Information

Information on Toxicological effects

Information on likely routes of exposure

Ingestion	May cause gastrointestinal irritation.
Inhalation	Dust may irritate respiratory system. Chronic exposure may result in lung disease. (See below)
Skin contact	May cause irritation, itching or dermatitis. (See below)
Eye contact	Contact with dust may cause mechanical irritation.

Symptoms related to the physical, chemical and toxicological characteristics
Acute exposure to airborne dust concentrations in excess of the PEL/TLV may result in coughing, dyspnea, wheezing, and a burning irritation of the nose, throat, and upper respiratory tract, along with possible impaired pulmonary function. Chronic exposures may result in lung disease. (Silicosis and/or lung cancer)
Contact with wet Portland Cement may cause severe irritation, redness, and possible burns. Continued and prolonged contact may result in drying of the skin. Contact with dust or glass fibers may produce itching, rash and/or redness. Repeated or prolonged exposure may result in dermatitis.

Toxicological data
No toxicological data is available for this product. Toxicological information for components of this product listed below.

Acute toxicity	Not available
Skin corrosion/irritation	Not available
Serious eye damage/eye irritation	Not available
Skin sensitization	Not available
Respiratory sensitization	Not available
Sensitization	Not available
Mutagenicity	Not available
Carcinogenicity	Not available

This product contains crystalline silica. (quartz) The International Agency for Research on Cancer (IARC) classifies crystalline silica inhaled in the form of quartz or cristobalite from occupational sources as carcinogenic to humans, Group 1. The National Toxicology Program (NTP) classifies respirable crystalline silica as a substance which may be reasonably anticipated to be a carcinogen. OSHA does not regulate crystalline silica as a human carcinogen.

Reproductive effects	Not available
Specific target organ toxicity – single exposure	Not available
Aspiration toxicity	Not available

Section 12: Ecological Information

(a) Ecotoxicity (aquatic and terrestrial, where available): This product could be toxic to fish due to its high alkalinity from the Portland Cement. No studies are available.
(b) Persistence and degradability: Unknown
(c) Bioaccumulative potential: Unknown.
(d) Mobility in soil: Unknown
(e) Other adverse effects (such as hazardous to the ozone layer): None known

Section 13: Disposal Considerations

This material is not considered a hazardous waste. Dispose of according to Local, State, Federal, and Provincial Environmental Regulations.

Section 14: Transport Information

This product is not a DOT hazardous material
Shipping Name: Same as product name
ICAO/IATA/IMO: Not applicable

Section 15: Regulatory Information

All ingredients are included on the TSCA inventory.
Federal Regulations
SARA Title III: Not listed under Sections 302, 304, and 313
CERCLA: Not listed
RCRA: Not listed
OSHA: Dust and potential respirable crystalline silica generated during product use may be hazardous.

State Regulations
California Prop 65: Respirable crystalline silica is known to the state of California to cause cancer.
Canada WHMIS
All components of this product are included in the Canadian Domestic Substances List (DSL).
Crystalline silica: WHMIS Classification D2A

PRIMER – Système 1 – Projet standard

Époxy de finition sans sablage ARP 2.1VOC Primer

Ratio : 3 :1 → vendus en kits 1x GALLONS

Partie-A : 83030A01 @ format 2.84 litres
Partie-B : 83030B01 @ format 950 ml

NE PAS DILUER ; PRÊT À L'USAGE

NE PAS PIGMENTER

Résistance saline : >1500hrs

Préparation :

- Bien lire la fiche technique avant d'appliquer
- Le nettoyage au solvant (SSPC-SP1) est nécessaire
- Arrondir tous les coins et adoucir les soudures, retirer les bavures de soudage, contaminants lousses (SSPC-SP2 ET SSPC-SP3)
- Pour acier autre que satiné, effectuer un grenaillage conformément la norme SSPC-SP6

Application :

- Mélanger la Partie A et Partie B indépendamment avant de les mélanger ensemble.
- Combiner les 2 parties ensemble en ratio 3 :1 en mélangeant mécaniquement à basse révolution pendant au moins 2 minutes jusqu'à ce que le mélange ait une consistance uniforme
- Utiliser un mesh 100 pour le filtre
- S'assurer que le taux d'humidité ambiante est en dessous de 80%.

ÉPAISSEURS :
Appliquer entre 4 et 6 mils humide
Vous obtiendrez entre 2.4 et 3.6 mils sec (DFT)

APPLIQUER LA FINITION SUPERSHIELD LA JOURNÉE MÊME, ENTRE 1h et 6h APRÈS

PRIMER – Système 2 – Résistance Saline

Époxy Haute Performance EF75122

Ratio : 4 :1

Partie-A : EF75112P1-12L @ format 12 litres
Partie-B : EF75061P2-3L @ format 3 litres

NE PAS DILUER ; PRÊT À L'USAGE

NE PAS PIGMENTER

Résistance saline >3000h.

Préparation :

- Bien lire la fiche technique avant d'appliquer
- Le nettoyage au solvant (SSPC-SP1) est nécessaire
- Arrondir tous les coins et adoucir les soudures, retirer les bavures de soudage, contaminants lousses (SSPC-SP2 ET SSPC-SP3)
- Pour acier autre que satiné, effectuer un grenaillage conformément la norme SSPC-SP6

Application :

- Mélanger la Partie A et Partie B indépendamment avant de les mélanger ensemble.
- Combiner les 2 parties ensemble en ratio 4 :1 en mélangeant mécaniquement à basse révolution pendant au moins 3 minutes jusqu'à ce que le mélange ait une consistance uniforme
- Utiliser un mesh 100 pour le filtre
- S'assurer que le taux d'humidité ambiante est en dessous de 80%.

ÉPAISSEURS :
Appliquer entre 7 et 8 mils humide
Vous obtiendrez entre 4.2 et 4.8 mils sec (DFT)

APPLIQUER LA FINITION SUPERSHIELD LA JOURNÉE MÊME, ENTRE 1h et 6h APRÈS

FINITION URÉTHANE – Système Universel (1 et 2)

<u>Uréthane Supershield sans Isocyanathes formule 3 :1</u>

Ratio : 3 :1

Partie-A : Supershield Intermix @ format 2.83l
Partie-B : SI25002P214 @ format 946ml

NE PAS DILUER ; PRÊT À L'USAGE

Préparation :

- Bien lire la fiche technique avant d'appliquer
- Aucun temps d'induction nécessaire

Application :

- Mélanger la Partie A et Partie B indépendamment avant de les mélanger ensemble.
- Combiner les 2 parties ensemble en ratio 3 :1 (vendu en kits) en mélangeant mécaniquement à basse révolution pendant au moins 2 minutes jusqu'à ce que le mélange ait une consistance uniforme
- Utiliser un mesh 100 pour le filtre
- S'assurer que le taux d'humidité ambiante est en dessous de 80%.
- Appliquer sur le primer en système « wet-on-wet » après 1 heure seulement, et dans un maximum de 6 heures sinon il y aura délamination entre les 2 produits.
- Le produit sera prêt à manipuler après 1 à 3 heures dépendant de la chaleur ambiante.

ÉPAISSEURS :
Appliquer entre <u>4 et 5 mils humide</u>
Vous obtiendrez entre 2.6 et 3.2 mils sec (DFT)

MÉTHODE DE PRISE DE MESURE D'ÉPAISSEUR DE PEINTURE

SELON SSPC-PA2

STANDARD DE BASE

- 3 relevés dans un rayon de 4cm à 5 endroits différents pour chaque surface de 100pi2
- Les relevés doivent être mesurés à maximum de 1po d'un rebord
- Total de 15 relevés individuels pour établir 1 mesure
- Un minimum de 5 relevés doit être dans le spectre de DFT requis par la spécification
- Aucun relevé peut représenter une valeur de :
    - Moins de 80% du DFT requis par la spécification
    - Plus de 120% du DFT requis par la spécification
- Si la moyenne des relevés indique une mesure acceptée par la spécification, passer à une autre pièce
- Si la moyenne des relevés indique une mesure hors spécification, la pièce ne doit pas être acceptée par le chargé de projet.

STANDARD SELON GRANDEUR DES SURFACES

- Pour les surfaces de moins de 1000pi2, sélectionner au hasard 3 endroits de 100pi2 et effectuer les prises de mesures conformément au standard de base mentionné ci-haut (45 relevés)
- Pour les surfaces de plus de 1000pi2, mesurer le premier 100pi2 conformément au standard de base mentionné ci-haut (45 relevés), et effectuer par la suite 1 seule mesure (15 relevés) pour chaque section de 100pi2 suivante.
- Lorsqu'une anomalie est détectée, reculer de section (100pi2) et prendre des relevés conformément au standard de base pour les surfaces de moins de 1000pi2 (5 spots de 3 relevés à 3 endroits différents = 45 relevés) jusqu'à ce que les sections respectent la spécification.
- Refaire les pièces défectueuses et recommencer.

LEXIQUE :

Relevé : Prise de mesure individuelle avec la jauge électronique à un endroit précis
Mesure : C'est la mesure du DFT utilisé pour le résultat final. Il est calculé en faisant moyenne des relevés.
DFT : Épaisseur de peinture sèche (dry film thickness)

TECHNICAL DATA
EF75122

Description

EF75122 is a grey, high solids, 2.8 VOC, epoxy primer. It is designed to fill blast profiles in a single coat. No induction time is required.

Mixed Coating Properties

Mix Ratio	4 Parts base to 1 Part epoxy part 2
VOC	
EF75060P2	3.00 lbs / gal or 360 grams / litre
EF75061P2	2.80 lbs / gal or 336 grams / litre
Volume Solids	
EF75060P2	57.61%
EF75061P2	60.64%
Sag	
Airless	12 - 15 mils
Air Assist Airless	12 - 15 mils
Air Spray	12 - 15 mils
HVLP	12 - 15 mils
Viscosity @ 70°F (21°C)	25 - 30 Seconds Zahn#2 / 300 cps
Pot Life @ 77°F (25°C)	
EF75060P2	5.00 hours
EF75061P2	4.00 hours
Salt Spray (B1000)	3000 hours @ 4 mils DFT
Theoretical Coverage	
EF75060P2	924 ft^2 / gal (22.6 m^2 / litre) @ 1 mil DFT
EF75061P2	972 ft^2 / gal (23.8 m^2 / litre) @ 1 mil DFT

DFT = Dry Film Thickness

Product Weight - *Container weight not included*

EF75122P1 base	13.82 lbs / gallon or 1.656 kg / litre
EF75060P2 standard cure	7.58 lbs / gallon or 0.909 kg / litre
EF75061P2 fast cure	7.76 lbs / gallon or 0.930 kg / litre

Shelf Life

Shelf Life is applicable only for material stored in unopened and undamaged original factory filled containers at 4° to 38°C (39° to 100°F).

EF75122P1	1 year	EF75060P2	2 years
		EF75061P2	2 years

Subject to reinspection. Store unused material in tightly closed containers. Contents of partially filled containers may show surface skinning after storage. If skinning forms, remove by straining before use.

BENEFITS

- excellent edge coverage
- exceptional corrosion resistance
- excellent adhesion
- excellent sprayability
- humidity resistance

USES

- power transmission & distribution equipment
- containment tanks
- OEM - chemical tankers & trailers
- OEM - oil patch applications
- OEM - fleet applications

TECHNICAL DATA
EF75122

Surface Preparation

SSPC – SP6 Commercial Blast minimum recommended or a minimum of 3-stage to 7-stage phosphate cleaning system.

Mixing Instructions

1) Pre-Mix EF75122P1 Base for 2 minutes with an air-operated Jiffy Mixer®, or equivalent, to produce a uniform consistency within its container

2) Properly ratio material at 4:1 (by volume):

4 Parts EF75122P1 Base to
1 Part EF75060P2 Standard Cure Epoxy Part 2 or
1 Part EF75061P2 Fast Cure Epoxy Part 2

3) Mix material for 3 minutes with an air-operated Jiffy Mixer®, or equivalent, to a uniform consistency before use

4) No induction time required

5) No Thinning required

6) Filter through 100 mesh in line filter

Application Instructions

Application Temperature

Minimum	55℉ (10℃)
Maximum	100℉ (38℃)

Equipment Settings

Air Spray:	pot pressure:	10 – 20 psi
	atomizing air:	45 – 65 psi
	nozzle set:	1.4 – 1.8
Airless Spray:	fluid pressure:	2000 - 2500 psi
	tip size:	.013 - .019
Air Assist Airless:	fluid pressure:	700 - 1500 psi
	atomizing air:	20 – 60 psi
	tip size:	.013 - .019

- Precision plural component equipment is recommended. All spray equipment including lines and filters must be kept clean at all times to avoid nozzle plugging. When hand mixing follow /Mixing Instructions' procedures.
- Apply in wet coats making even parallel passes. Overlap each pass 50% to minimize holidays, bare areas and pinholes.
- Excess wet film will cause sags and runs.

Recommended dry film thickness is 3 mils above profile.

If thinners are required: *Please contact your Guertin Representative for recommendations.*

Note: Successful application requires following the recommended temperature, humidity conditions and film thickness ranges.

Recoat Window for best D.O.I.

Substrate Temp	70℉ (21℃)
Over Itself	up to 3 days
With Urethane Topcoat	4 hours up to 24 hours
With Super-Shield® Topcoat	1 hour to 4 hours

Flash times:
Allow a minimum of 4.0 hours flash off time before applying a two-component urethane topcoat. Higher film builds (>4mils) and/or cooler temperatures will require longer flash times.

The epoxy primer can be recoated with itself up to 3 days. After 3 days the epoxy primer must be scuff sanded.

It can be topcoated with 2K urethane and Super-Shield® topcoats up to 24 hours. After 24 hours the epoxy primer must be scuff sanded.

It is recommended to apply at ambient air and surface temperatures between 55°- 100℉ (10°- 38℃). App ly at a relative humidity level below 80%.

Surface temperature must be at least 5℉ (3℃) abov e the dew point to ensure that moisture condensation does not occur during application and the drying period.

Higher/lower temperatures & humidity, film thickness, improper activator range and poor air movement will affect the dry time and recoat window.

Equipment Cleanup

Clean application equipment with Guertin's SP02859T0 or SP05127T0.

Safety Precautions

FOR INDUSTRIAL USE ONLY. To be used by professionally trained personnel using proper safety equipment. Use only with adequate ventilation. Warning: this product is flammable, keep away from heat, sparks and open flame. Please refer to material safety data sheets.

Warranty

Guertin Coatings warrants its product to be free from defects in materials and workmanship and will REPLACE ANY PRODUCT PROVED TO BE DEFECTIVE, OR REFUND OF THE ORIGINAL PURCHASE PRICE OF THE QUANTITY PROVED TO BE DEFECTIVE. Requests for refund or replacement of product must be made in writing within one year from the original date of purchase. This Warranty does not apply to defects due, directly or indirectly, to misuse, abuse, negligent application, or acts of God.

GUERTIN COATINGS WILL NOT BE LIABLE FOR DEATH, INJURIES TO PERSONS OR PROPERTY, OR FOR INCIDENTAL, CONTINGENT, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OF OUR PRODUCT, INCLUDING DOWNTIME OR LOSS OF USE OF PRODUCT.

All data, statements, and recommendations made herein are based upon information we believe to be reliable, but are made without any representation, guarantee or warranty of accuracy. Our products are sold on the condition that the user himself will evaluate them, as well as our recommendations, to determine their suitability for his own purpose before adoption. Also, statements regarding the use of our products or processes are not to be construed as recommendations for their use in violation of any patent rights or in violation of any applicable laws or regulations.

SECTION IV - RISQUES D'INCENDIE OU D'EXPLOSION

POINT D'ECLAIR: -6 C (TAGLIABUE C. C.)
CLASS 3, DIV. 1

LEL: 1.0%
UEL: 13.8%

MOYENS D'EXTINCTION: CHIMIQUES SECS CO2 LA MOUSSE BROUILLARD DE L'EAU

RISQUE PARTICULIERE DE LUTTE CONTRE L'INCENDIE: LIQUIDE COMBUSTIBLE (POINT ECLAIR EST INFERIEUR A 100 F/38 C). PEUT FORMER DES MELANGES INFLAMMABLES. LES VAPEURS PEUVENT ETRE EXPLOSIVE DANS L'AIR. ELIMINER TOUTE SOURCE D'IGNITION. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE. GARDER LE RECIPIENT FERME.

PROCEDURE D'EXTINCTION: LES POMPIERS DOIVENT PORTER UN APPAREIL RESPIRATOIRE AUTONOME ET DES VETEMENTS DE PROTECTION COMPLETS. UTILISER DE L'EAU PULVERIZEE POUR REFROIDER LES STRUCTURES ET LES CONTENANTS EXPOSES AU FEU.

SECTION V - DANGERS POUR LA SANTE

EFFETS DE LA SUREXPOSITION: *** INHALATION: LES VAPEURS PEUVENT IRRITER. L'EXPOSITION A DES VAPEURS TRES CONCENTREES PEUVENT CAUSER DES MAUX DE TETES, DES ETOURDISSEMENTS, DES NAUSEES, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. L'EXPOSITION PROLONGEE A DES VAPEURS TRES CONCENTREES PEUT CAUSER L'EVANOUISSEMENT OU LA MORT. *** INGESTION: MODEREMENT TOXIQUE. LE PRODUIT EST NOCIF LORSQU'IL EST INGERE. L'INGESTION DE GRANDES QUANTITES PEUT CAUSER DES MAUX DE TETES, DES NAUSEES, DES VOMISSEMENTS, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. UNE PETITE QUANTITE DE CE LIQUIDE ASPIREE DANS LES POUMONS SOIT PAR INGESTION OU PAR VOMISSEMENT, RISQUE D'AVOIR DE GRAVE EFFETS NOCIF POUR LA SANTE (P.EX., PROVOQUER UN OEDEMENT PULMONAIRE). *** PEAU: PEUT CAUSER DE L'IRRITATION MODEREE. PEUT CAUSER LE DEGRAISSMENT ET LA DERMATITE. UNE EXPOSITION PROLONGEE PEUT RESULTER A UNE SENSIBILITE DANS LA PEAU. PEUT PROVOQUER DES BRULURES CHIMIQUES. PEUT ETRE ABSORVER PAR LA PEAU ET PROVOQUER UN RISQUE POUR LA SANTE. *** YEUX: LES VAPEURS PEUVENT IRRITER. LE LIQUIDE ET LES BRUINES IRRITENT LES YEUX ET PEUVENT CAUSER DES BRULURES. *** EFFETS DE LA SUREXPOSITION: CONTIENT SILICE. LA SUREXPOSTION A LONG TERME AU SILICE CAUSE LA SILICOSE ET LA DETERIATION CARDIOPULMONAIRE. LA SUREXPOSITION A LONG TERME AU NOIR DE CARBONE PEUT ENTRAINER DES LESIONS CUMULATIVES AU COEUR ET AUX POUMONS. L'EXPOSITION PROLONGEES OU REPETEES PEUT CAUSER UNE SENSIBILITE DE LA PEAU ET/OU UNE SENSIBILITE RESPIRATOIRE. L'EXPOSITION PROLONGEES OU REPETEES PEUT CAUSER UN MAUVAIS FONCTIONNEMENT DU FOIE, DES REINS, ET/OU DU SYSTEME NERVEUX. L'EXPOSITION PROLONGEES OU REPETEES PEUVENT CAUSER A LA LONGUE DES DOMMAGES AUX SYSTEME SANGUIN, GASTRO-INTESTINAL, NERVEUX, ET/OU REPRODUCTEUR. LES EXPOSITIONS PROLONGEES ET REPETEES PEUVENT PROVOQUER DES EFFETS TOXIQUE. L'EXPOSITION A CE PRODUIT NE DEVRAIT CAUSER AUCUN PROBLEME LORSQUE MANIFULER AVEC SOINS. LE CIRC A CLASSÉ L'ÉTHYLBENZENE PARMI LES SUBSTANCES DU GROUPE 2B EN SE FONDANT SUR DES DONNÉES SUFFISANTES DÉMONTRANT SA CANCÉROGÉNÉCITÉ POUR LES ANIMAUX DE LABORATOIRE, MAIS DE DONNÉES INSUFFISANTES SELON LES RÉSULTATS DE CERTAINES ÉTUDES MENÉES SUR DES ANIMAUX, DE TRES GRANDES EXPOSITIONS AUX XYLENES ON ENTRAINÉ DES EFFETS NÉFASTES SURE LE DÉVELOPPEMENT DES EMBRYONS/FOTUS. CES EFFETS SONT SOUVENT APPARUS A DES NIVEAUX D'EXPOSITION TOXIQUES POUR LA MERE. LA PORTÉE DE CES RÉSULTATS POUR LES HUMAINS N'A PAS ÉTÉ ÉTABLIE. LES EXPOSITIONS EXCESSIVES LONG TERME PEUT CAUSER TALCOSE, FIBROSE PULMONAIRE, QUI A SON TOUR MON ENTRAINER DES DOMMAGES GRAVES ET PERMANENTS AUX POUMONS. UNE ÉTUDE PORTANT SUR L'INHALATION DURANT TOUTE UNE VIE FAIT RESSORTIR QU'UNE EXPOSITION A DE LA POUSSIERE DE DIOXYDE DE TITANE A UNE CONCENTRATION DE 250 MG/M3 A ENTRAINÉ L'APPARITION DE TUMEURS AUX POUMONS CHEZ DES RATS. CES TUMEURS NE SONT APPARUES QU'A DES CONCENTRATIONS DE POUSSIERES QUI DÉPASSENT LA CAPACITÉ DES MÉCANISMES DE CLAIRANCE PULMONAIRE DES ANIMAUX ET SONT DIFFÉRENTES DES TUMEURS PULMONAIRES COMMUNES CHEZ L'ETRE HUMAIN TANT DANS LE TYPE QUE DANS

L'EMPLACEMENT. LA PERTINENCE DE CES RÉSULTATS SURE LE CANCER (CIRC) A CLASSÉ LE DIOXYDE DE TITANE PARMI LES LES CANCÉROGENES PRÉSUMÉS POUR LES HUMAINS (GROUPE 2B) EN SE FONDANT SURE DES DONNÉES INSUFFISANTES DÉMONTRANT SA CANCÉROGÉNÉCITÉ CHEZ LES HUMAINS ET DE DONNÉES SUFFISANTES DÉMONTRANT SA

CONDITIONS MEDICALES GENERALEMENT AGGRAVEES PAR L'EXPOSITION: LES PROBLEMES CUTANES. LES PROBLEMES OCCULAIRES. LES PROBLEMES RESPIRATOIRE CHRONIQUES. EN 1995 CIRC A CONCLUDE EXISTE DES PREUVES SUFFISANTES CHEZ LES ANIMAUX EXPERIMENTAUX DE LA CANCEROGENICITE DU NOIR DE CARBONE CLASSEMENT BLACK PROBABLEMENT CANCEROGENE AUX HUMAINS.

VOIES PRIMAIRES DE PENETRATION: CONTACT DERMIQUE INHALATION INGESTION

MESURES DE PREMIERS SOINS: *** INHALATION: TRANSPORTER A L'AIR FRAIS. AIDER LA RESPIRATION SI NECESSAIRE. GARDER LA VICTIME AU CHAUD ET CALME. CONSULTER UN MEDECIN. *** INGESTION: NE PAS FAIRE VOMIR OU BOIRE. FAIRE REPOSER. CONSULTER SANS DELAI UN MEDECIN. SI LE VOMISSEMENT SE PRODUIT, GARDER LA TETE DE LA VICTIME BAISSEE AU-DESSOUS DE SES HANCHES POUR EVITER L'ASPIRATION DANS LES POUMONS. *** PEAU: LAVER LA PEAU CONTAMINEE AVEC DE L'EAU. CONSULTER SANS DELAI UN MEDECIN. *** YEUX: RINCER DE L'EAU CLAIRE PENDANT AU MOINS 15 MINUTES ET FAIRE IMMEDIATEMENT APPEL A UN MEDECIN.

SECTION VI - DONNEES SUR LA REACTIVITE

STABILITE: CE PRODUIT EST STABLE DANS DES CONDITIONS NORMALES D'ENTREPOSAGE.

POLYMERISATION DANGERUSE: NE SE PRODUIRA PAS DANS DES CONDITIONS NORMALES.

PRODUITS DE DECOMPOSITION DANGEREUX: OXYDES DE CARBONE. VAPEURS TOXIQUES ET FUMEE. FUMEE INFLAMMABLES.

CONDITIONS A EVITER: CHALEUR, ETINCELLES, FLAMMES.

PRODUITS INCOMPATIBLES: AGENTS OXIDABLE. ACIDES. ALCALINS. AMINES. AGENTS REDUCTEURS. AGENTS D'AZOTES. LES SULFURES. HALOGENES. L'EAU. LES COMPOSES CHLORINES.

SENSIBILITE AUX DECHARGES ELECTROSTATIQUES: PRENDRE DES PRECAUTIONS CONTRE LES DECHARGES STATIQUES.

SECTION VII - MESURES POUR FUITE OU DEVERSEMENT

ACTION A PRENDRE EN CAS DE FUITE OU DE DEVERSEMENT: ELIMINER TOUTE SOURCE D'IGNITION. ARRETER LA SOURCE DE FUITE. ASSURER UN VENTILATION EVACUER TOUT PERSONNEL NON-ESSENTIEL. PORTER LES VETEMENTS NECESSAIRE. ENDIGER L'ENDROIT POUR EMPECHER PROPAGATION. ABSORBER LE LIQUIDE AVEC UN PRODUIT ABSORBANT INERTE. TRANSFERER DANS UN CONTENANT A L'EPREUVE D'IGNITION.

METHODES D'ELIMINATION: NE PAS CONTAMINER LES COURS D'EAU POTABLE, LES LACS, LES ETANGS OU LES RUISSEAUX. SELON REGLEMENTS MUNICIPAUX, LES LOIS PROVINCIAL ET FEDERALES APPLICABLE A VOTRE LOCALITE.

SECTION VIII - PRECAUTIONS D'EMPLOI

PROTECTION RESPIRATOIRE: UTILISER UN MASQUE RESPIRATOIRE A HAUT RENDEMENT QUI PROTEGE CONTRE LES VAPEURS ORGANIQUES ET LES POUSSIERES TOXIQUES. POUR DES HAUTES CONCENTRATIONS, UTILISER UN MASQUE RESPIRATOIRE A ALIMENTATION D'

VENTILATION: VENTILATION EFFICACE SUR PLACE POUR EVACUER LA POUSSIERE. EMPLOYER UN APPAREILAGE DE VENTILATION ANTIDEFLATION.

GANTS PROTECTEURS: PORTER DES GANTS/VETEMENTS RESISTANTS AUX PRODUITS CHIMIQUES AFIN DE PROTEGER LA PEAU POTENTIELLEMENT EXPOSEE.

PROTECTION YEUX: EVITER LE CONTACT AVEC LES YEUX. PORTER DES LUNETTES PROTECTRICES CONTRE LES PRODUITS CHIMIQUES ET UN ECRAN FACIAL.

AUTRE EQUIPMENT PROTECTEUR: TABLIER ET BOTTES IMPERMEABLES. DOUCHE OCULAIRE ET DOUCHE D'URGENCE.

AUTRE MESURES DE PROTECTION: EVITER TOUT CONTACT AVEC LES YEUX, LA PEAU ET LES VETEMENTS. EVITER DE RESPIRER. NE PAS INGERER. CONSERVER LOIN DE TOUS ALIMENTS. BIEN LAVER LES MAINS APRES AVOIR MANIPULER LA MATIERE. CHANGER ET LAVER LES VETEMENTS CONTAMINES.

RENSEIGNEMENTS SPECAUX EN MATIERE D'EXPEDITION: PEINTURE. LIQUIDE INFLAMMABLE CLASSE:3 UN# 1263 LE GROUPE D'EMBALLAGE II. CANUTEC 24 HOUR EMERGENCY NUMBER: (613) 996-6666

SECTION IX - PRECAUTIONS SPECIALES

PRECAUTIONS A PRENDRE A LA MANIPULATION ET L'ENTREPOSAGE: ENTREPOSER DANS UN ENDROIT FRAIS, SEC ET BIEN VENTILE, A L'ECART DES MATIERES INCOMPATIBLES. NE PAS LAISSER A PROXIMITE D'UNE SOURCE DE CHALEUR, D'ETINCELLES, OU D'UNE FLAMME. GARDER LE RECIPIENT FERME. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE.

AUTRES PRECAUTIONS: NE PAS COUPER, BROYER, SOUDER OU PERCER SUR OU PRES DE CE CONTENANT.

SECTION X - HMIS INFORMATION

HMIS RATIO: SANTE: 2 FLAMMABILITE: 3 REACTIVITE: 1 PROTECTION PERSONNELLE: K

TECHNICAL DATA
EF25000 SUPER-SHIELD® SERIES
3:1 & 4:1 Mix Ratio

Description

The EF25000 Series is a high performance, isocyanate free urethane system that is VOC compliant at ≤2.8 - 3.5 lbs / gal (≤335 - 420 grams/litre). Each of Cloverdale's Super-Shield® coatings are custom formulated to customer specifications; application and cure properties vary to optimize performance.

Mixed Coating Properties

Mix Ratio	3 Parts base to 1 Part catalyst (faster cure, lower spray viscosity, excellent flow out) 4 Parts base to 1 Part catalyst (STD cure, higher sag resistance, longer open time)
VOC	≤2.8 - 3.5 lbs / gal or ≤335 - 420 grams / litre
Volume Solids	50 - 65%
Sag	
Airless	4 – 5 mils
Air Assist Airless	4 – 5 mils
Air Spray	4 – 5 mils
HVLP	4 – 5 mils
Viscosity @ 70℉ (21℃)	30 ± 3 Seconds Zahn#2 (3:1 Mixing) 35 ± 3 Seconds Zahn#2 (4:1 Mixing)
Pot Life @ 77℉ (25℃)	2.00 hours
Gloss	
20°	Matte to ultra gloss (to customer specifications)
60°	Matte to ultra gloss (to customer specifications)
Impacts	160+ in/lbs @ 2 mils DFT
Pencil Hardness	HB – F
Theoretical Coverage @ 1 mil DFT	802 - 1042 ft^2 / gal (19.7 – 25.6 m^2 / litre)

DFT = Dry Film Thickness

Product Weight - *Container weight not included*

EF25000 base	8.76 – 11.26 lbs / gallon or 1.050 – 1.350 kg / litre
SI25002P2 catalyst	6.75 lbs / gallon or 0.810 kg / litre

Shelf Life

Shelf Life is applicable only for material stored in unopened and undamaged original factory filled containers at 39°- 100℉ (4°to 38℃).

EF25000 series base 2 years SI25002P2 6 months

Subject to reinspection. Store unused material in tightly closed containers. Contents of partially filled containers may show surface skinning after storage. If skinning forms, remove by straining before use.

BENEFITS

- ISO Free
- outstanding appearance
- excellent DOI
- excellent color & gloss retention
- low VOC
- ultra low HAP's
- meets Canadian auto refinish single stage VOC requirement
- 4:1 meets AIM VOC spec for 'other industrial maintenance coatings'

USES

- fleet finishing applications
- oil field application
- ACE
- electrical transformers
- recreational vehicles
- plastics

TECHNICAL DATA
EF25000 Series

Surface Preparation
Properly prepared, primed surface following all application procedures and recoat instructions on primer technical data sheet.

Mixing Instructions
Mixing at 3:1 by volume:

3 Parts SI25000 series base to
1 Part SI25002P2 activator

Mixing at 4:1 by volume:

4 Parts SI25000 series base to
1 Part SI25002P2 activator

Mix thoroughly to uniform consistency before use. Filter through 100 mesh in line filter.

Application Instructions
Application Temperature

Minimum	55℉ (10℃)
Maximum	100℉ (38℃)

Equipment Settings

Air Spray:	pot pressure:	10 – 20 psi
	atomizing air:	45 – 65 psi
	nozzle set:	1.0 – 1.8
Airless Spray:	fluid pressure:	2000 - 2500 psi
	tip size:	.011 - .015
Air Assist Airless:	fluid pressure:	700 - 1500 psi
	atomizing air:	20 – 60 psi
	tip size:	.011 - .015

- Precision plural component equipment is recommended. All spray equipment including lines and filters must be kept clean at all times to avoid nozzle plugging. When hand mixing smaller quantities, stir thoroughly to a uniform consistency prior to use.
- Apply in wet coat making even parallel passes. Overlap each pass 50% to minimize holidays, bare areas and pinholes.
- Excess wet film will cause sags and runs.

Recommended dry film thickness is 2 – 3 mils.

Supershield® is only recommended to be a finish coat over two component epoxy primers. Never apply over one component or urethane primers.

If thinners are required: *Please contact your Cloverdale Representative for recommendations.*

Note: Successful application requires following the recommended temperature, humidity conditions and film thickness ranges.

Drying Schedule
To customer specifications

Recoat Window for Best DOI

Substrate Temp	70℉ (21℃)
Over Itself	15 minutes to 1 day
Over Epoxy Primers	1 hour to 3 days

Flash times: Please refer to specific Cloverdale Primer Technical Data Sheet for appropriate flash times and recoat windows for this topcoat.

It is recommended to apply at ambient air and surface temperatures between 55°- 100℉ (10° - 38℃). App ly at a relative humidity level between 33% - 85%.

Surface temperature must be at least 5℉ (3℃) abov e the dew point to ensure that moisture condensation does not occur during application and the drying period.

Higher/lower temperatures & humidity, film thickness, improper activator range and poor air movement will affect the dry time and recoat window.

Equipment Cleanup
Clean application equipment with Cloverdale's SP03078T0.

Safety Precautions
FOR INDUSTRIAL USE ONLY. To be used by professionally trained personnel using proper safety equipment. Use only with adequate ventilation. Warning: this product is flammable, keep away from heat, sparks and open flame. Please refer to material safety data sheets.

Warranty
Cloverdale Paint Inc. warrants its product to be free from defects in materials and workmanship and will REPLACE ANY PRODUCT PROVED TO BE DEFECTIVE, OR REFUND OF THE ORIGINAL PURCHASE PRICE OF THE QUANTITY PROVED TO BE DEFECTIVE. Requests for refund or replacement of product must be made in writing within one year from the original date of purchase. This Warranty does not apply to defects due, directly or indirectly, to misuse, abuse, negligent application, or acts of God.

CLOVERDALE PAINT INC. WILL NOT BE LIABLE FOR DEATH, INJURIES TO PERSONS OR PROPERTY, OR FOR INCIDENTAL, CONTINGENT, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OF OUR PRODUCT, INCLUDING DOWNTIME OR LOSS OF USE OF PRODUCT.

All data, statements, and recommendations made herein are based upon information we believe to be reliable, but are made without any representation, guarantee or warranty of accuracy. Our products are sold on the condition that the user himself will evaluate them, as well as our recommendations, to determine their suitability for his own purpose before adoption. Also, statements regarding the use of our products or processes are not to be construed as recommendations for their use in violation of any patent rights or in violation of any applicable laws or regulations.

SECTION IV - RISQUES D'INCENDIE OU D'EXPLOSION

POINT D'ECLAIR: 15 C
(TAGLIABUE C. C.)
CLASS 3, DIV. 2

LEL: 1.0%
UEL: 12.1%

MOYENS D'EXTINCTION: CO2 CHIMIQUES SECS LA MOUSSE

RISQUE PARTICULIER DE LUTTE CONTRE L'INCENDIE: LIQUIDE COMBUSTIBLE (POINT ECLAIR EST INFERIEUR A 100 F/38 C). PEUT FORMER DES MELANGES INFLAMMABLES. LES VAPEURS PEUVENT ETRE EXPLOSIVE DANS L'AIR. ELIMINER TOUTE SOURCE D'IGNITION. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE. GARDER LE RECIPIENT FERME.

PROCEDURE D'EXTINCTION: LES POMPIERS DOIVENT PORTER UN APPAREIL RESPIRATOIRE AUTONOME ET DES VETEMENTS DE PROTECTION COMPLETS. UTILISER DE L'EAU PULVERIZEE POUR REFROIDIR LES STRUCTURES ET LES CONTENANTS EXPOSES AU FEU.

SECTION V - DANGERS POUR LA SANTE

EFFETS DE LA SUREXPOSITION: *** INHALATION: LES VAPEURS PEUVENT IRRITER. L'EXPOSITION A DES VAPEURS TRES CONCENTREES PEUVENT CAUSER DES MAUX DE TETES, DES ETOURDISSEMENTS, DES NAUSEES, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. L'EXPOSITION PROLONGEE A DES VAPEURS TRES CONCENTREES PEUT CAUSER L'EVANOUISSEMENT OU LA MORT. *** INGESTION: MODEREMENT TOXIQUE. LE PRODUIT EST NOCIF LORSQU'IL EST INGERE. L'INGESTION DE GRANDES QUANTITES PEUT CAUSER DES MAUX DE TETES, DES NAUSEES, DES VOMISSEMENTS, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. UNE PETITE QUANTITE DE CE LIQUIDE ASPIREE DANS LES POUMONS SOIT PAR INGESTION OU PAR VOMISSEMENT, RISQUE D'AVOIR DE GRAVE EFFETS NOCIF POUR LA SANTE (P.EX., PROVOQUER UN OEDEM PULMONAIRE). *** PEAU: PEUT CAUSER DE L'IRRITATION MODEREE. PEUT CAUSER LE DEGRAISSMENT ET LA DERMATITE. UNE EXPOSITION PROLONGEE PEUT RESULTER A UNE SENSIBILITE DANS LA PEAU. PEUT PROVOQUER DES BRULURES CHIMIQUES. PEUT ETRE ABSORBER PAR LA PEAU ET PROVOQUER UN RISQUE POUR LA SANTE. *** YEUX: LES VAPEURS PEUVENT IRRITER. LE LIQUIDE ET LES BRUINES IRRITENT LES YEUX ET PEUVENT CAUSER DES BRULURES. *** EFFETS DE LA SUREXPOSITION: L'EXPOSITION PROLONGEES OU REPETEES PEUT CAUSER UNE SENSIBILITE DE LA PEAU ET/OU UNE SENSIBILITE RESPIRATOIRE. L'EXPOSITION PROLONGEES OU REPETEES PEUVENT CAUSER A LA LONGUE DES DOMMAGES AUX SYSTEME SANGUIN, GASTRO-INTESTINAL, NERVEUX, ET/OU REPRODUCTEUR. LE CIRC A CLASSE L'ETHYLBENZENE PARMI LES SUBSTANCES DU GROUPE 2B EN SE FONDANT SUR DES DONNEES SUFFISANTES DEMONTRANT SA CANCEROGENECITE POUR LES ANIMAUX DE LABORATOIRE, MAIS DE DONNEES INSUFFISANTES DEMONTRANT L'APPARITION DE CANCER CHEZ LES HUMAINS. SELON LES RESULTATS DE CERTAINES ETUDES MENEES SUR DES ANIMAUX, DE TRES GRANDES EXPOSITIONS AUX XYLENES ON ENTRAINE DES EFFETS NEFASTES SUR LE DEVELOPPEMENT DES EMBRYONS/FETUS. CES EFFETS SONT SOUVENT APPARUS A DES NIVEAUX D'EXPOSITION TOXIQUES POUR LA MERE. LA PORTEE DE CES RESULTATS POUR LES HUMAINS N'A PAS ETE ETABLIE.

CONDITIONS MEDICALES GENERALEMENT AGGRAVEES PAR L'EXPOSITION: LES PROBLEMES CUTANES. LES PROBLEMES RESPIRATOIRE CHRONIQUES.

VOIES PRIMAIRES DE PENETRATION: INHALATION CONTACT DERMIQUE

MESURES DE PREMIERS SOINS: *** INHALATION: TRANSPORTER A L'AIR FRAIS. AIDER LA RESPIRATION SI NECESSAIRE. GARDER LA VICTIME AU CHAUD ET CALME. CONSULTER UN MEDECIN. *** INGESTION: NE PAS FAIRE VOMIR OU BOIRE. FAIRE REPOSER. CONSULTER SANS DELAI UN MEDECIN. SI LE VOMISSEMENT SE PRODUIT, GARDER LA TETE DE LA VICTIME BAISSEE AU-DESSOUS DE SES HANCHES POUR EVITER L'ASPIRATION DANS LES POUMONS. *** PEAU: LAVER LA PEAU CONTAMINEE AVEC DE L'EAU. CONSULTER SANS DELAI UN MEDECIN. *** YEUX: RINCER DE L'EAU CLAIRE PENDANT AU MOINS 15 MINUTES ET FAIRE IMMEDIATEMENT APPEL A UN MEDECIN.

SECTION VI - DONNEES SUR LA REACTIVITE

STABILITE: CE PRODUIT EST STABLE DANS DES CONDITIONS NORMALES D'ENTREPOSAGE.

POLYMERISATION DANGERUSE: NE SE PRODUIRA PAS DANS DES CONDITIONS NORMALES.

PRODUITS DE DECOMPOSITION DANGEREUX: OXYDES DE CARBONE. OXYDES D'AZOTE. VAPEURS TOXIQUES ET FUMEE.

CONDITIONS A EVITER: CHALEUR, ETINCELLES, FLAMMES.

PRODUITS INCOMPATIBLES: AGENTS OXIDABLE. ACIDES. ALCALINS. AGENTS REDUCTEURS. LES SULFURES. LES METAUX ACTIFS, IONS DE METAUX. LE CUIVRE. HALOGENES. L'EAU.

SENSIBILITE AUX DECHARGES ELECTROSTATIQUES: PRENDRE DES PRECAUTIONS CONTRE LES DECHARGES STATIQUES.

SECTION VII - MESURES POUR FUITE OU DEVERSEMENT

ACTION A PRENDRE EN CAS DE FUITE OU DE DEVERSEMENT: ELIMINER TOUTE SOURCE D'IGNITION. ARRETER LA SOURCE DE FUITE. EVACUER TOUT PERSONNEL NON-ESSENTIEL. PORTER LES VETEMENTS NECESSAIRE. ENDIGER L'ENDROIT POUR EMPECHER PROPAGATION. ABSORBER LE LIQUIDE AVEC UN PRODUIT ABSORBANT INERTE. TRANSFERER DANS UN CONTENANT A L'EPREUVE D'IGNITION.

METHODES D'ELIMINATION: NE PAS CONTAMINER LES COURS D'EAU POTABLE, LES LACS, LES ETANGS OU LES RUISSEAUX. SELON REGLEMENTS MUNICIPAUX, LES LOIS PROVINCIAL ET FEDERALES APPLICABLE A VOTRE LOCALITE.

SECTION VIII - PRECAUTIONS D'EMPLOI

PROTECTION RESPIRATOIRE: UTILISER UN MASQUE RESPIRATOIRE A HAUT RENDEMENT QUI PROTEGE CONTRE LES VAPEURS ORGANIQUES ET LES POUSSIERES TOXIQUES. POUR DES HAUTES CONCENTRATIONS, UTILISER UN MASQUE RESPIRATOIRE A ALIMENTATION D'AIR.

VENTILATION: VENTILATION EFFICACE SUR PLACE POUR EVACUER LA POUSSIERE. EMPLOYER UN APPAREILAGE DE VENTILATION ANTIDEFLATION.

GANTS PROTECTEURS: PORTER DES GANTS/VETEMENTS RESISTANTS AUX PRODUITS CHIMIQUES AFIN DE PROTEGER LA PEAU POTENTIELLEMENT EXPOSEE.

PROTECTION YEUX: EVITER LE CONTACT AVEC LES YEUX. PORTER DES LUNETTES PROTECTRICES CONTRE LES PRODUITS CHIMIQUES ET UN ECRAN FACIAL.

AUTRE EQUIPMENT PROTECTEUR: TABLIER ET BOTTES IMPERMEABLES. DOUCHE OCULAIRE ET DOUCHE D'URGENCE.

AUTRE MESURES DE PROTECTION: EVITER TOUT CONTACT AVEC LES YEUX, LA PEAU ET LES VETEMENTS. EVITER DE RESPIRER. NE PAS INGERER. CONSERVER LOIN DE TOUS ALIMENTS. BIEN LAVER LES MAINS APRES AVOIR MANIPULER LA MATIERE. CHANGER ET LAVER LES VETEMENTS CONTAMINES.

RENSEIGNEMENTS SPECAUX EN MATIERE D'EXPEDITION: PEINTURE. LIQUIDE INFLAMMABLE CLASSE:3 UN# 1263 LE GROUPE D'EMBALLAGE II. CANUTEC 24 HOUR EMERGENCY NUMBER: (613) 996-6666

SECTION IX - PRECAUTIONS SPECIALES

PRECAUTIONS A PRENDRE A LA MANIPULATION ET L'ENTREPOSAGE: ENTREPOSER DANS UN ENDROIT FRAIS, SEC ET BIEN VENTILE, A L'ECART DES MATIERES INCOMPATIBLES. NE PAS LAISSER A PROXIMITE D'UNE SOURCE DE CHALEUR, D'ETINCELLES, OU D'UNE FLAMME. GARDER LE RECIPIENT FERME. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE.

AUTRES PRECAUTIONS: NE PAS UTILISER DE PRESSION POUR VIDER LE CONTENANT. NE PAS COUPER, BROYER, SOUDER OU PERCER SUR OU PRES DE CE CONTENANT. TOUS LES CONTENANTS CONTIENNENTDES RESIDUS ET DES VAPEURS. MANIPULER LES CONTENANTS VIDES COMME S'ILS ETAIENT PLEINS.

SECTION X - HMIS INFORMATION

83030
DATA SHEET

2.1 VOC ARP Primer

Automotive Primer

Industry Approvals		
Auto Refinish:	✓	Category 1
Env. Canada:		Exempt
MPI:		N/a
AWWA:		N/a

General Properties

A high performance epoxy primer for vehicle refinish applications requiring a primer with less than 250 gr/lt VOC. The 83030 primer has superior corrosion resistance when applied to prepared steel. No induction time required. 83030 has excellent sanding capability, but provides a finish so smooth that sanding is often not required.

Recommended Uses

For use in vehicle refinish applications, truck boxes & bodies, power distribution equipment, tanks, agricultural equipment, and general industrial priming.

Product Information

GENERIC TYPE
Amine Cured Epoxy

PIGMENT TYPE
Anti-corrosive

COLOR
Grey

BASES
N/a

FINISH
Flat

AVERAGE VOLUME SOLIDS
60.2%

AVERAGE WEIGHT SOLIDS
77.0%

RECOMMENDED FILM THICKNESS
Wet: 3.3-5.0 mils (82 - 125 microns)
Dry: 2-3 mils (50 - 75 microns)
See your Cloverdale Representative for project recommendations.

THEORETICAL COVERAGE
965 ft²/gal @1 mil (25 microns) DFT
23.7 m²/L @ 1 mil (25 microns) DFT
Actual coverage may vary depending on substrate and application methods.

MIXED RATIO
3 Parts 83030A; 1 Part 83030B

INDUCTION TIME
No induction time required

POT LIFE
7 hours at 25°C (77°F) (less at higher temperatures)

VISCOSITY MIXED
57 - 63 KU

TEMPERATURE RESISTANCE (DRY)
93°C (200°F) Continuous
120°C (250°F) Intermittent

V.O.C. MIXED
250 gm./lit. (2.1 lb./gal.)
**refer to MSD sheet for current VOC values*

THINNER
Use as supplied.

ACCELERATOR
A-65

Methods of Application

AIRLESS SPRAY	1500 - 200 psi with tip sizes .011" - .013" or equivalent
H.V.L.P.	Tip size 1.4 - 1.6 mm. 8 - 10 psi cap pressure
CONVENTIONAL	40 - 50 psi gun pressure
BRUSH / ROLLER	Not recommended

Drying Time - Temperature, Relative Humidity, and Film Thickness will affect dry and re-coat times.

Substrate Temperature	Touch Dry	Hard Dry	Overcoat Interval with Armourshield		
			Minimum	Maximum	Normal
25°C (77°F)	3.5 hours	6 hours	2 hours	3 days	4 hours

admin@distributiones.com

83030

Recommended Topcoats

Most Cloverdale Conventional and High Performance Coatings. Note: Only the 837 and 839 series urethanes should be used for ARP applications.

Surface Preparation

Area to be painted should be thoroughly cleaned with a detergent solution in water followed by a wash using a wax and grease remover. Sand the bare metal areas using 80-180 grit abrasive. Old, existing finishes should be sanded using 320 – 400 grit paper. Sanded areas should be re-cleaned and primed as quickly as possible after drying.

Limitations

Not recommended for immersion service. For best results apply when substrate temperature is above 10°C (50°F), and at a minimum of 3°C (5°F) above the dew point. Do not apply when the relative humidity is above 85%.

Mixing Instructions

Mix 83030 base A component and curing agent 83030 activator B separately with good agitation. Add curing agent to base component and mix thoroughly until homogenous. If thinning is necessary or required proceed only after recommended induction time has passed.

Safety Precautions

This product is for industrial use only. **Refer to Material Safety Data Sheet for proper health and safety information.**

Storage and Handling

FLASH POINT	-20°C (-4°F) TCC
PRODUCT WEIGHT	1.435 kg/lt mixed (container extra)
STORAGE	Cool, dry, secure location. See your Cloverdale Paint Representative.
PACKAGE SIZE	1 gal kit - 3 qts 83030A and 1 qt. 83030B 4 gal kit - 3 gal 83030A and 1 gal 83030B

Some package sizes or colors may be by special order only. Please check with your Cloverdale Representative when ordering.

83030

PERFORMANCE CRITERIA

1. Abrasion Resistance

Method: ASTM D4060 Abrasion Resistance of Organic Coating by Taber Abrader, 1000 gram load, CS-17 Wheel, 1000 Cycles

Coating System: 1 coat 83030

Results: 161 mg.

2. Adhesion

Method: ASTM D4541, method "E"

Coating System: 83030 primer, 839 Armourshield topcoat

Results: >900 psi

3. Chemical Resistance

Method: Covered spot test for 1 week at room temperature

Coating System: 1 coat 83030

Coating was exposed to - 5% Sodium Hydroxide Solution; 5% Sulfuric Acid Solution; 5% Hydrochloric Acid; 5% Mono Basic Sodium Phosphate Solution; 5% Sodium Hypochlorite Solution; Heavy Duty Liquid Detergent

Results: Unaffected - slight discoloration permitted

4. Recoating Window

Method: Internal method - Minimum = the time to >80% gloss @ 20 degree angle. Maximum = longest time tested with 5B adhesion of topcoat

Coating System: 83030 primer, 839 Armourshield topcoat

Results: 2 hrs to >72 hrs

5. Salt Spray (Fog)

Method: ASTM B117

Coating System A: 1 coat 83030

Results:>1000 hrs

Coating System B: 1 coat 83030, 1 coat 83904

Results: >1500 hrs

6. Flexibility

Method: ASTM D522 Cylindrical Mandrel Bend

Coating System: 1 coat 83030

Results: Not less than 9% elongation

7. Pencil Hardness

Method: ASTM D3363

Coating System A: 1 coat 83030

Results: pass 2H

La Sarre (Qc) J9Z 2Y1
T.819.339.2101
admin@distributiones.com

SECTION IV - FIRE AND EXPLOSION DATA

FLASH POINT: -18 C
(TAGLIABUE C. C.)
CLASS 3, DIVISION 1

LEL: 1.0%
UEL: 16.3%

EXTINGUISHING MEDIA: DRY CHEMICAL CARBON DIOXIDE FOAM WATER FOG

UNUSUAL FIRE AND EXPLOSION HAZARDS: FLAMMABLE LIQUID (FLASH POINT LESS THAN 100 F/38 C). MAY FORM FLAMMABLE MIXTURES. VAPORS MAY BE EXPLOSIVE IN AIR. ELIMINATE IGNITION SOURCES. GROUND ALL EQUIPMENT. KEEP CONTAINER CLOSED.

SPECIAL FIREFIGHTING PROCEDURES: FIREFIGHTERS SHOULD WEAR SELF CONTAINED BREATHING APPARATUS AND FULL PROTECTIVE CLOTHING. USE WATER SPRAY TO COOL NEARBY CONTAINERS AND STRUCTURES EXPOSED TO FIRE.

SECTION V - HEALTH HAZARD DATA

EFFECTS OF OVER EXPOSURE: *** INHALATION: VAPORS MAY BE IRRITATING. EXPOSURE TO HIGH VAPOR CONCENTRATIONS MAY CAUSE HEADACHES, DIZZINESS, NAUSEA, AND CENTRAL NERVOUS SYSTEM DEPRESSION. PROLONGED EXPOSURE TO HIGH VAPOR CONCENTRATIONS MAY CAUSE UNCONSCIOUSNESS OR DEATH. *** INGESTION: MODERATELY TOXIC. HARMFUL IF SWALLOWED. SWALLOWING LARGE QUANTITIES CAUSES HEADACHES, NAUSEA, VOMITING, AND CENTRAL NERVOUS SYSTEM DEPRESSION. MAY CAUSE LIVER AND/OR KIDNEY DAMAGE. SMALL AMOUNTS OF LIQUID DRAWN INTO THE LUNGS FROM SWALLOWING OR VOMITING MAY CAUSE SEVERE HEALTH AFFECTS (E.G.PULMONARY EDEMA). *** SKIN: CAN CAUSE MODERATE IRRITATION. CAN CAUSE DEFATTING AND DERMATITIS. PROLONGED EXPOSURE MAY CAUSE SKIN SENSITIZATION. CAN CAUSE CHEMICAL BURNS. CAN BE ABSORBED THROUGH THE SKIN CAUSING A HEALTH HAZARD. *** EYES: VAPORS MAY IRRITATE. LIQUID AND MISTS WILL IRRITATE AND MAY BURN THE EYES. *** CHRONIC AFFECTS OF OVEREXPOSURE: CONTAINS SILICA. LONG TERM EXPOSURE TO SILICA DUST MAY CAUSE SILICOSIS AND CARDIOPULMONARY IMPAIRMENT. REPEATED OR PROLONGED EXPOSURES MAY CAUSE SKIN AND/OR RESPIRATORY SENSITIZATION. REPEATED OR PROLONGED EXPOSURES MAY CAUSE LIVER, KIDNEY, AND/OR NEURAL DYSFUNCTION. REPEATED OR PROLONGED EXPOSURES MAY CAUSE DELAYED EFFECTS INVOLVING BLOOD, GASTRO-INTESTINAL, NERVOUS AND/OR REPRODUCTIVE SYSTEMS. LONG TERM EXPOSURE TO DUSTS CAN LEAD TO RESPIRATORY IMPAIRMENT. HIGH EXPOSURES TO XYLENES IN SOME ANIMAL STUDIES HAVE BEEN REPORTED TO CAUSE HEALTH EFFECTS ON THE DEVELOPING EMBRYO/FETUS. THESE EFFECTS WERE OFTEN AT LEVELS TOXIC TO THE MOTHER. THE SIGNIFICANCE OF THESE FINDINGS TO HUMANS HAS NOT BEEN DETERMINED. LONG-TERM EXCESSIVE EXPOSURES MAY CAUSE TALCOSIS, PULMONARY FIBROSIS, WHICH IN TURN MAY LEAD TO SEVERE AND PERMANENT DAMAGE TO THE LUNGS. IN A LIFETIME INHALATION STUDY, EXPOSURE TO 250 MG/M3 TITANIUM DIOXIDE DUST RESULTED IN THE DEVELOPMENT OF LUNG TUMOURS IN RATS. THESE TUMOURS OCCURRED ONLY AT DUST LEVELS THAT OVERWHELMED THE ANIMALS' LUNG CLEARANCE MECHANISMS AND WERE DIFFERENT FROM COMMON HUMAN LUNG TUMOURS IN BOTH TYPE AND LOCATION. THE RELEVANCE OF THESE FINDINGS TO HUMANS IS UNKNOWN. THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER (IARC) HAS CLASSIFIED TITANTIUM DIOXIDE AS POSSIBLY CARCINOGENIC TO HUMANS (GROUP 2B) BASED ON INADEQUATE EVIDENCE OF CARCINOGENICITY IN HUMANS AND SUFFICIENT EVIDENCE OF CARCINOGENICITY IN EXPERIMENTAL ANIMALS. ACCORDING TO THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER (IARC), METHYL ISOBUTYL KETONE IS POSSIBLY CARCINOGENIC TO HUMANS (GROUP 2B)

MEDICAL CONDITIONS PRONE TO AGGRAVATION BY EXPOSURE: SKIN DISORDERS. EYE DISORDERS. CHRONIC RESPIRATORY DISORDERS.

PRIMARY ROUTE(S) OF ENTRY: DERMAL INHALATION INGESTION

EMERGENCY AND FIRST AID PROCEDURES: *** INHALATION: REMOVE TO FRESH AIR. ASSIST

Distribution E.S.

SECTION V - HEALTH HAZARD DATA

BREATHING IF NECESSARY. KEEP VICTIM WARM AND QUIET. SEEK MEDICAL ATTENTION. *** INGESTION: DO NOT INDUCE VOMITING OR GIVE FLUIDS. KEEP AT REST. GET PROMPT MEDICAL ATTENTION. IF VOMITING OCCURS, KEEP VICTIM'S HEAD BELOW HIPS TO PREVENT ASPIRATION INTO THE LUNGS. *** SKIN: FLUSH CONTAMINATED SKIN WITH WATER. GET PROMPT MEDICAL ATTENTION. *** EYES: FLUSH WITH CLEAN WATER FOR AT LEAST 15 MINUTES AND IMMEDIATELY GET MEDICAL ATTENTION.

SECTION VI - REACTIVITY DATA

STABILITY: THIS PRODUCT IS STABLE UNDER NORMAL STORAGE CONDITIONS.

HAZARDOUS POLYMERIZATION: COULD OCCUR UNDER NORMAL CONDITIONS. CARE MUST BE EXERCISED.

HAZARDOUS DECOMPOSITION PRODUCTS: OXIDES OF CARBON. TOXIC FUMES AND SMOKE. FLAMMABLE FUMES.

CONDITIONS TO AVOID: HEAT, SPARKS OR FLAME.

INCOMPATABILITY: OXIDIZING AGENTS. ACIDS. ALKALIES. AMINES. SULFIDES. ALDEHYDES. HALOGENS. CHLORINATED COMPOUNDS.

SENSITIVITY TO STATIC DISCHARGE: TAKE PRECAUTIONARY MEASURES AGAINST STATIC DISCHARGES.

SECTION VII - SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: ELIMINATE IGNITION SOURCES. STOP SOURCE OF SPILL. VENTILATE AREA. EVACUATE ALL NON ESSENTIAL PERSONNEL. WEAR APPROPRIATE PROTECTIVE EQUIPMENT. DIKE SPILL TO KEEP FROM SPREADING. COVER WITH INERT ABSORBENT. REMOVE TO DISPOSAL CONTAINER.

WASTE DISPOSAL METHOD: DO NOT CONTAMINATE ANY LAKES, PONDS, STREAMS, OR UNDERGROUND WATER SUPPLIES. DISPOSE OF IN ACCORDANCE WITH LOCAL, PROVINCIAL AND FEDERAL REGULATIONS IN YOUR AREA.

SECTION VIII - SAFE HANDLING AND USE INFORMATION

RESPIRATORY PROTECTION: USE A COMBINATION ORGANIC VAPOR/TOXIC PARTICULATE HIGH EFFICIENCY FILTER RESPIRATOR. FOR HIGH CONCENTRATIONS, USE AIR SUPPLIED RESPIRATOR.

VENTILATION: EFFICIENT LOCAL EXHAUST VENTILATION IS REQUIRED. USE EXPLOSION PROOF VENTILATION EQUIPMENT.

PROTECTIVE GLOVES: WEAR APPROPRIATE CHEMICAL RESISTANT GLOVES/CLOTHING TO PREVENT SKIN CONTACT.

EYE PROTECTION: DO NOT GET IN EYES. WEAR SAFETY GLASSES/GOGGLES OR A FACE SHIELD.

OTHER PROTECTIVE EQUIPMENT: IMPERMEABLE APRON AND BOOTS. EYE BATH AND SAFETY

SECTION VIII - SAFE HANDLING AND USE INFORMATION

SHOWER.

HYGENIC PRACTICES: DO NOT GET IN EYES, SKIN OR CLOTHING. AVOID INHALING. DO NOT SWALLOW. KEEP AWAY FROM FOOD PRODUCTS. WASH HANDS THOROUGHLY AFTER HANDLING. CHANGE AND WASH CONTAMINATED CLOTHING.

SPECIAL SHIPPING INFORMATION: PAINT. FLAMMABLE LIQUID CLASS:3 UN#1263 PACKING GROUP II. CANUTEC 24 HOUR EMERGENCY NUMBER: (613) 996-6666

SECTION IX - SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE: STORE IN A COOL, DRY, WELL VENTILATED AREA, AWAY FROM ALL INCOMPATIBLE MATERIALS. KEEP AWAY FROM HEAT, SPARKS AND FLAME. KEEP CONTAINER CLOSED. GROUND ALL EQUIPMENT.

OTHER PRECAUTIONS: DO NOT USE PRESSURE TO EMPTY CONTAINERS. DO NOT CUT, GRIND, WELD OR DRILL ON OR NEAR THIS CONTAINER. CONTAINERS WILL RETAIN PRODUCT RESIDUES AND VAPORS. HANDLE EMPTY CONTAINERS AS IF THEY WERE FULL. DO NOT PUNCTURE, INCINERATE, BURN OR STORE ABOVE 45 C. SOME OR ALL OF THE LISTED COMPONENTS OF THIS PRODUCT MAY PRESENT A HEALTH THREAT IN THE FORM OF DUSTS.

Polyisocyanurate Foam Sheathing Continuous Insulation

AP™ FOIL-FACED

PRODUCT DATA SHEET

DESCRIPTION

Johns Manville AP™ Foil-Faced Foam Sheathing board consists of a uniform closed-cell polyisocyanurate foam core bonded on each side to a foil facer. One side has a reflective foil facer and the other side has a white non-reflective foil facer to suit your building needs.

Polyiso provides one of the highest R-values per inch of any rigid insulation (R-6.0 at 1 inch). Furthermore, when properly installed, AP Foil-Faced Foam Sheathing functions as a water-resistive barrier, vapor barrier and air barrier, eliminating the need to install additional components.

AP Foil-Faced Foam Sheathing is produced with an EPA-compliant hydrocarbon-based blowing agent that has zero Ozone Depletion Potential (ODP) and virtually no Global Warming Potential (GWP); it also meets both CFC- and HCFC-free specification requirements. Polyiso is one of North America's most widely used insulation products and has been cited by the EPA for its responsible impact on the environment.

AP Foil-Faced Foam Sheathing provides exceptional heat, moisture and air control to protect your building's exterior wall assembly.

INSTALLATION

AP Foil-Faced Foam Sheathing is lightweight and can be easily cut with a utility knife or saw. Use maximum board lengths to minimize the number of joints. Vertical joints should be staggered. Butt joints should be centered over framing. To create a water-resistive barrier or an air barrier, treat seams and penetrations as instructed in the installation guide and in accordance with manufacturer's guidelines. Once installed, AP Foil-Faced Foam Sheathing may be left exposed for up to 60 days. Consult your local building department for code requirements.

COMPLIANCES

- ASTM C1289 Type 1, Class 1
- CAN/ULC S704, Type 1, Class 1
- ICC-ES Evaluation Report ESR-3398
- Canadian Construction Materials Centre 13104-L
- Air Barrier Association of America Evaluated Air Barrier Material, Assembly & Water Resistive Barrier
- International Building Code
- International Residential Code
- International Energy Conservation Code
- ENERGY STAR
- ASHRAE 90.1
- California State Insulation Quality Standards

PERFORMANCE STANDARDS

- ASTM C1289, Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
- CAN/ULC-S704, Standard for Thermal Insulation, Polyurethane and Polyisocyanurate, Boards, Faced
- ASTM E84, Test for Surface Burning Characteristics of Building Materials
- CAN/ULC S102, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies
- NFPA 259, Standard Test Method for Potential Heat of Building Materials
- NFPA 285, Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components
- AC 71, Acceptance Criteria for Foam Plastic Sheathing Panels Used as Water-Resistive Barriers
- ASTM E331, Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference
- AATCC Test Method 127, Water Resistance: Hydro Static Pressure Test
- ASTM E1233, Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights, and Curtain Walls by Cyclic Air Pressure Differential
- ASTM E2178, Standard Test Method for Air Permeance of Building Materials
- ASTM E2357, Standard Test Method for Determining Air Leakage of Air Barrier Assemblies

AVAILABILITY

AP Foil-Faced Foam Sheathing is available in the sizes shown in Table 1 (see reverse). For additional information or special size inquiries, please consult a sales representative at 800-654-3103.

PERFORMANCE ADVANTAGES

Thermal Insulation: inch for inch, polyiso has one of the highest energy efficiencies. R-values for AP Foil-Faced Foam Sheathing are shown in Table 1, and physical properties are shown in Table 2 (see reverse). R means resistance to heat flow. The higher the R-value, the greater the insulating power.

Water-Resistive Barrier: when properly installed as part of a Johns Manville Wall System, AP Foil-Faced Foam Sheathing meets the ICC-ES AC71 acceptance criteria for foam plastic sheathing used as a water-resistive barrier. Please see the installation guide for qualifying assemblies and detailed instructions.

Vapor Barrier: at a minimum thickness of one inch, AP Foil-Faced Foam Sheathing has a vapor permeance of 0.05 perms and qualifies as a Class I vapor retarder.

Air Barrier: when properly installed as part of a Johns Manville Wall System, AP Foil-Faced Foam Sheathing meets the Air Barrier Association of America boardstock criteria for materials and assemblies. Please see installation guide for qualifying assemblies and detailed instructions.

Noncorrosive: does not accelerate corrosion of pipes, wiring or metal studs.

Lightweight: easy to handle, can be cut with a utility knife or saw.

Polyisocyanurate Foam Sheathing Continuous Insulation

PRODUCT DATA SHEET **AP™ FOIL-FACED**

STORAGE
Store AP Foil-Faced Foam Sheathing elevated above the floor or ground and standing water. If stored outdoors, keep dry by covering completely with a waterproof tarpaulin.

LIMITATIONS
AP Foil-Faced Foam Sheathing is nonstructural. The walls must be braced in accordance with the requirements of the applicable code.

WARRANTY
All Johns Manville products are sold subject to Johns Manville's Limited Warranty and Limitation of Remedy. For a copy of these documents, call 800-654-3103.

WARNING
AP Foil-Faced Foam Sheathing is combustible and shall only be used as specified by the local building code with respect to flame spread classification and to the use of a suitable thermal barrier when required.

TECHNICAL SERVICES
Johns Manville can provide technical information to assist in addressing questions regarding AP Foil-Faced Foam Sheathing. Please call 800-654-3103 for technical assistance.

PERFORMANCE DATA

THERE ARE 2 LAYERS OF 2" THICK INSULATING PANELS, FOR A TOTAL OF 4" ALL AROUND. APPLIED ON WALLS, CEILING AND FLOOR.

Entrance®

GLACE-GUARD
Cold Storage Doors

ISO 9001 2008 CERTIFIED

The high performance entrance door!

The Glace-Guard™ Entrance door combines insulation performance and durability, while being attractive and virtually maintenance free. This entrance door, available in 3" or 4" thickness, is made of high quality metal skins. Its panels are insulated with a rigid polyurethane foam core, providing the highest insulation value. Its hardware is engineered to withstand an intensive usage, while providing safety and smoothness of operation.

The Glace-Guard™ Entrance door is operated by industrial cam-lift hinges, heavy duty pull handle and heavy gauge steel automatic door closer, ensuring trouble-free operation and effortless firm closing.

The Glace-Guard™ Entrance door is suitable for coolers and freezers, for both interior and exterior applications. It is your best door investment when performance, durability and low maintenance costs are criteria of selection.

The Glace-Guard™ Entrance door is ideal for applications such as:

- Supermarkets
- Restaurants
- Cold storage distribution warehouses
- Grocery distribution warehouses
- Food processing plants

Cold storage entrance door
Model Glace-Guard™ Entrance ET-300

Entrance®/ Glace-Guard™

ET-300, ET-400 Series

Section 08326

Well insulated:

The Glace-Guard™ Entrance ET-300 (3" thick) and ET-400 (4" thick) doors are insulated with a rigid polyurethane foam core.

Designed for energy savings:

Full perimeter magnetic vinyl gasket and bottom double U-shaped rubber gasket to ensure airtight joints.

Built to last with superior quality materials:

Proven experience and expertise achieve a perfect adherence of the polyurethane foam to the metal skins, ensuring panel strength, rigidity and preservation of insulation value over time. The high quality 26 gauge galvanized steel with superior 25-micron polyester top coat, ensures durability and resistance to corrosion.

Heavy duty hardware for long lasting use and smooth operation:

Industrial cam-lift hinges, heavy duty pull handle and heavy gauge steel door closer, combined with a variety of accessories, provide trouble-free operation, safety and durability.

CFC-FREE 3"/4" POLYURETHANE INSULATION

Entrance®
GLACE-GUARD Cold Storage Doors

Entrance ET-300	3" (75mm) thick
Entrance ET-400	4" (100mm) thick

Technical specifications

Section 08326

Reference product:
Glace-Guard™ Entrance ET-300 or Glace-Guard™ Entrance ET-400, as manufactured by Thermostop Inc., www.thermostop.com

Temperature range:
-20ºF to +120ºF (-29ºC to +49ºC)

Standard dimensions:
- 36" x 84" (914mm x 2134mm)
- 60" x 84" (1524mm x 2134mm)

Other dimensions available upon request.

Thickness:
- Glace-Guard™ Entrance ET-300: 3" (75mm) thick
- Glace-Guard™ Entrance ET-400: 4" (100mm) thick

Panels:
Insulated with rigid polyurethane, foamed in place under high pressure between two metal skins. Standard 26ga. steel skins, white stucco finish. For other skin options, please consult ***Metal skins options.*** Panel frame is made with heavy duty aluminum extrusions.

Door frame and thermal barrier:
Door frame is made of shock-proof 5/32" (4mm) thick exterior and interior extruded aluminum angles. The exterior aluminum angle has an incorporated resin thermal break.

Hinges:
- For doors with width under 60" (1524mm): Self-closing and reversible high pressure die-cast zinc hinges with self-lubricating nylon cams. Brushed chrome finish.

- For doors with width of 60" (1524mm) and greater: Heavy duty self-closing and reversible high pressure die-cast zinc flanges, 3/16" (5mm) thick steel strap. Gray finish.

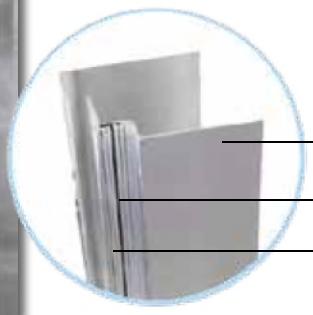
Pull handle:
High pressure die-cast zinc cylinder locking handle, complete with emergency inside release system. Brushed chrome finish.

Door closer:
Heavy gauge steel mechanical door closer, complete with extra-wide hook. Chrome finish.

Perimeter magnetic gasket:
A full perimeter magnetic vinyl gasket insures that the door is airtight and vapour-proof on the perimeter joint.

Bottom door gasket:
Extruded aluminum retainer with two U-shaped rubber gaskets to insure airtight joints.

Heat trace (optional):
For freezer applications, the door is equipped with a heat trace on four (4) sides of the door, preventing ice or frost accumulation and eliminating the need to have a heated threshold.



Kick plate (optional):
36" (914mm) high steel kick plate, on full door width, to protect the door bottom against forklift impacts.
- 16ga. galvanized steel, smooth finish
- 18ga. stainless steel, #304 finish

Metal skins options:

Steel	Finish
26ga. (0.41mm)	stucco, white
20ga. (0.86mm)	smooth, white
16ga. (1.42mm)	smooth, painted

Aluminum	Finish
24ga. (0.60mm)	stucco, white or grey RAL-9006
16ga. (1.30mm)	smooth, clear anodized

Specifications:

☒ ET–400: 4"(100mm)
☒ Cooler application (36°F and above)

Standard Features:

*Polyurethane insulated panels
*20ga galvanized steel, white, smooth finish with ribs
*Heavy–duty mirror frame 5/32" (4mm) in two extruded angles. Aluminium mill finished.
*Magnetic seals on door frame perimeter.
*Bottom double blade seal on door panel.
* 3 (three) 10" cam–lift hinges.
* 1 (one) LATCH handle with padlock provision (padlock by others) & inside MUSHROOM release

Latch handle is chrome finished steel. Hinges are brush chrome finished steel

Others features:

* Exterior chain with S hook and eye bolt
* Interior storm door chain with spring

ITEM # 1825

STANDARD LOUVER

SQUARE LOUVER

US Patent No. 6,176,776

1825 NARROW JAMB HEATED VENT

- Exclusive, patented Kason ventilator seals tight and opens at lowest pressure of any competitive vent.
- Lightweight, springless valves provide greater air flow at lower pressure than spring-loaded valves.
- Lower pressure allows doors to open and close with ease and reduces stress on walk-in enclosure joints, reducing chance of leaks.
- Computer-designed heater eliminates valve freezing.
- Narrow profile unit mounts in door jamb.
- Port installs through 2 1/2" (63.5mm) diameter hole with minimal wiring.
- Poppet valves close tightly to prevent air leakage.
- Engineered to optimize the self-closing potential of Kason Walk-in hinges, latches and door closers.

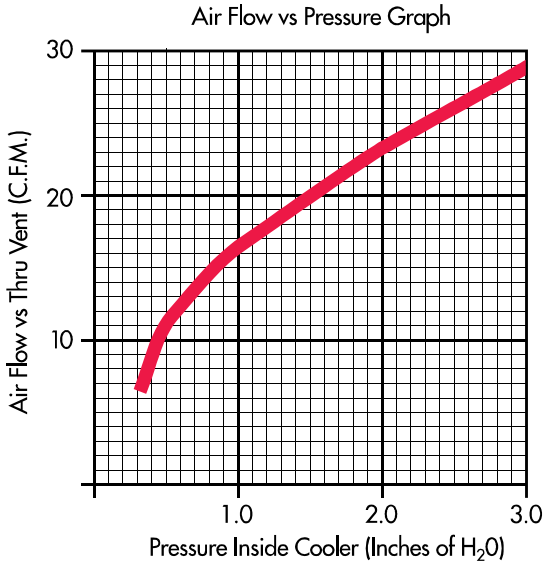
PERFORMANCE TESTED

Comprehensive performance tests show that Kason 1825 pressure relief ports provide better air flow at lower pressure and greater frost resistance than competitive ventilators.

SPECIFICATIONS

MATERIAL:
Gray ABS plastic valve body and louvers, PVC tube, internal aluminum and stainless steel parts.

POWER:
.04 amp @ 120 VAC; 4W heater.
.02 amp @ 230 VAC; 4W heater.



UL LISTING:
File No. E57306

SELECTION:
See Quantity Selector Chart, page B-59.

MOUNTING:
No. 1825 only mounts horizontally. Drilled for No. 10 (5.0mm) screws. Requires 2-1/2" (63.5mm) diameter hole.

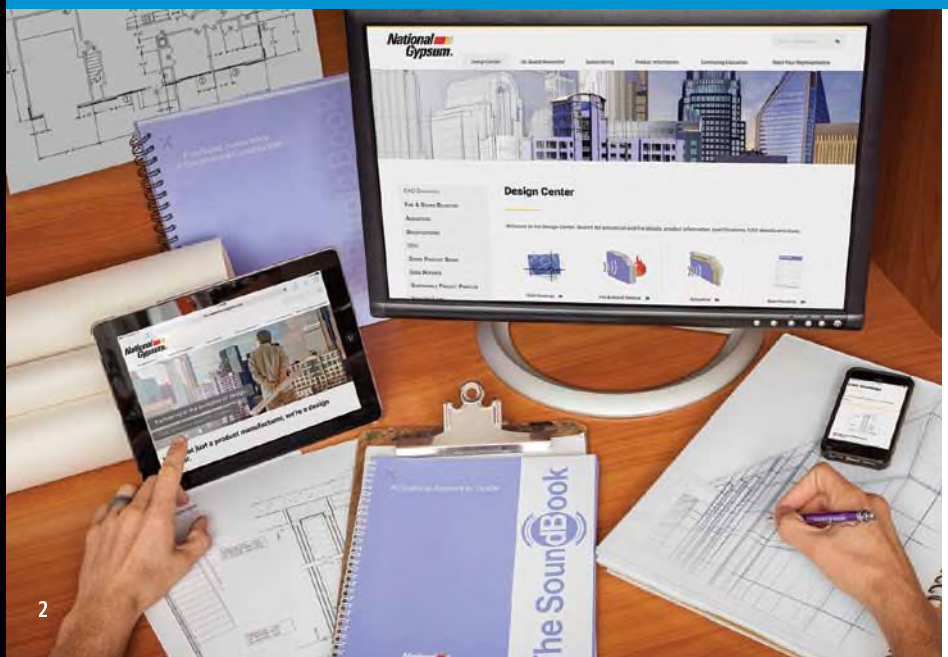
With High-Quality Products And Resources

Founded in 1925, National Gypsum is one of the world's largest producers of quality building products. For nearly a century, customers like you have looked to us for the best products, service and technical support. With a focus on sustainability, we strive to bring you the finest in construction products, education and resources to meet and exceed your expectations.



With Design That Considers The Environment

Together, we can attain the highest level of ecological responsibility and resource-efficient technology. National Gypsum is committed to developing and implementing sustainable green building policies, standards and practices. Beyond offering products that can help contribute to healthier environments and have achieved GREENGUARD Certification for indoor air quality, we can help you meet the criteria for green programs and LEED credits.

GREENGUARD GOLD

PRODUCT CERTIFIED FOR LOW CHEMICAL EMISSIONS: UL.COM/GG UL 2818

With Technical Support You Can Count On

Great products are nothing without great customer service. For detailed technical information about product applications, installation requirements, code requirements or roof and wall assemblies, call 1-800-NATIONAL[MD]. Talk directly to a technical expert with up-to-date knowledge of products, specifications, building codes and more. Our technical experts can even review your plans and drawings and get back to you with answers to your questions within 48 hours.

Working Wherever Your Project Takes You

Choose From Four Types Of PermaBase[MD] BRAND Cement Board:

More Hard-Working Varieties With Qualities You Can Depend On

With four types of PermaBase[MD] BRAND Cement Board to choose from, you'll find a match for most any project. This durable substrate withstands prolonged exposure to moisture in both interior and exterior applications. Lightweight and easy to install, PermaBase promises to deliver for the long run – with the industry's best warranties. It is also GREENGUARD Certified for low-chemical emissions, which can contribute to healthier indoor environments.

Saving You Time And Money

These exclusive PermaBase features translate to cost savings for you:

EdgeTech[MD] Technology – This patented, reinforced edge allows fasteners to be installed closer to the board's edge and reduces damage from handling.

Polystyrene Beads – Embedded in the PermaBase core, these beads help to lighten the board's weight, improve the ease of cutting, and create lower water absorption, preventing the mortar/finish adhesive from drying prematurely.

Our PermaBase[MD] Product Family

1 PermaBase[MD] Cement Board

The original that set the industry standard.

2 PermaBase PLUS[MD] Cement Board

Weighs 25% less than other cement boards on the market.

3 PermaBase UltraBacker[MD] Cement Board

Provides excellent rigidity for special applications with the lowest water-absorption rate.

4 PermaBase Flex[MD] Cement Board

Very flexible yet strong, and ideal for use around archways, columns, stairwells – wherever an evenly curved surface is required.

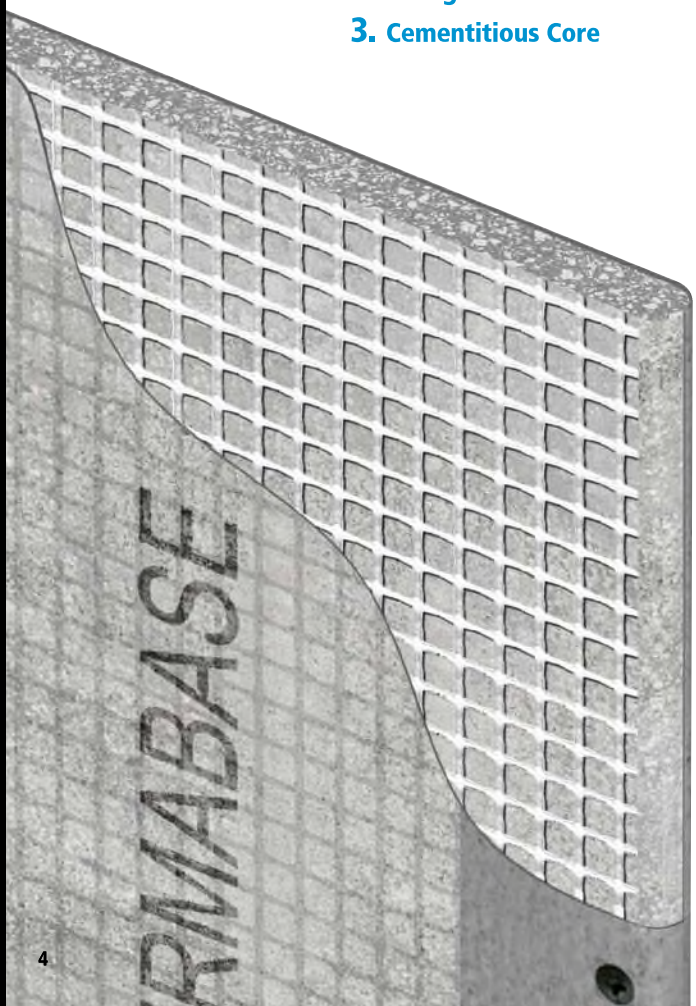
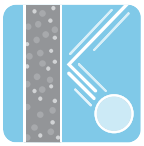
Building In Strength And Quality



Reinforce With The Best Rigid Substrate: PermaBase[MD] BRAND Cement Board

PermaBase[MD] provides a durable surface designed to withstand prolonged exposure to moisture. Made with Portland cement, aggregate and fiberglass mesh, it works well as an underlayment for tub and shower surrounds, countertops, flooring and a variety of other interior and exterior applications. Lightweight and easy to install, our patented EdgeTech[MD] Technology allows a closer nail or screw application.

Quality To The Core



1. **Patented Reinforced Edge**
2. **Fiberglass Mesh**
3. **Cementitious Core**

Resists Moisture Better

- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Achieves the industry's lowest water-absorption rating (ASTM C473) – offering better installation.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong And Lasts Long

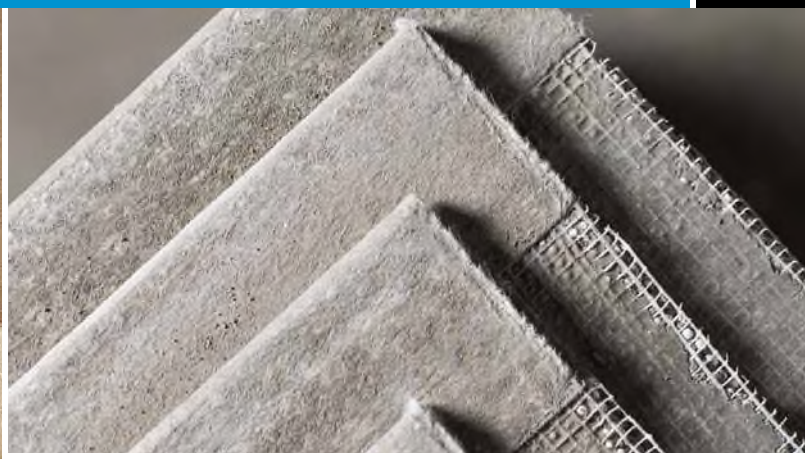
- Resists impact and remains dimensionally stable – extending the life of your project.
- Holds up to the toughest conditions.

Installs Quickly

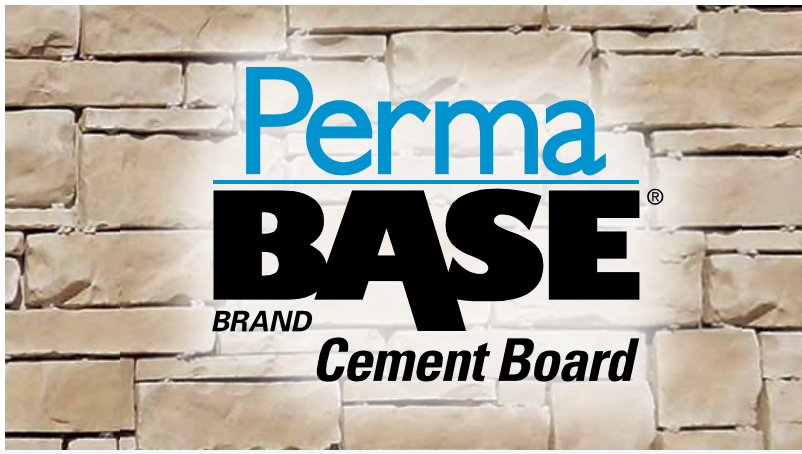
- Lightweight and easy to cut – speeding up installation.
- Reduces jobsite waste – easier, cleaner cut.
- Patented EdgeTech[MD] Technology allows for a closer edge fastening and reduces damage from handling.

Works For Interior And Exterior Projects

– One Panel, Many Applications



- Adhere tile, stone or thin brick directly to PermaBase in exterior applications – saving time and money.
- Durable substrate for direct-applied coating systems.
- Meets UL & ULC classifications for one- and two-hour fire-rated assemblies.
- Building code approved – one substrate that does the job of many.



Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.
- 15-Year Limited Warranty: Exterior applications.

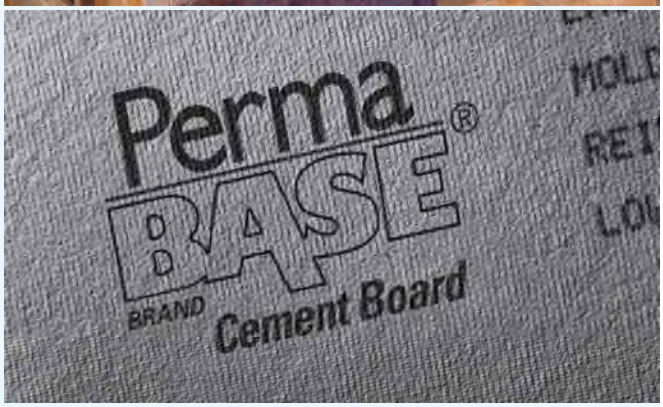
Expanding Your Project Horizon



Dream Up Your Designs – Interior And Exterior

Install Fast, Cut Costs And Improve Quality With PermaBase[MD] BRAND Cement Board

- Stays strong – manufactured from cement and fiberglass reinforcement.
- Provides consistent quality – produced in a factory controlled environment and meets ASTM C1325.
- Remains dimensionally stable.
- Resists moisture and mold.
- Cuts and handles easily – patented EdgeTech[MD] Technology allows fasteners to be installed closer to the board's reinforced edge and reduces damage from handling.
- Absorbs less water – providing greater open time and increased workability of adhering materials.
- Offers performance enhancement options – stronger and lighter alternative to traditional methods.

Interior Applications

PermaBase[MD] is a superior underlayment for many interior applications, including:

- **Kitchens**
  - Countertops
  - Backsplashes
- **Bathrooms**
  - Shower and tub enclosures
  - Garden and whirlpool tubs
  - Steamrooms and saunas
- **Special Additions**
  - Swimming pool and whirlpool decks and enclosures
- **Flooring**
  - For kitchens and bathrooms
  - For entryways and foyers
  - For laundry rooms
- **Walls**
  - For bathrooms
  - For accent walls
  - For fireplaces

Exterior Applications

PermaBase provides an excellent substrate for many in-demand exterior applications, including Cement Board Masonry Veneer Wall System (CBMV), Cement Board Stucco System (CBSS), Continuous Insulation (CI), and Exterior Insulation and Finish System (EIFS). PermaBase allows the combination of exterior finishes on one continuous wall sheathing, providing greater design flexibility.

- Commercial exteriors
- Residential exteriors
- Outdoor kitchens
- Decks

Cement Board Masonry Veneer Wall System (CBMV)

Combine the strength and durability of PermaBase with the popular beauty of stone and thin brick veneers. Use in residential and low-rise commercial applications.

Cement Board Masonry Veneer Wall System is designed to:

- Offer a complete, engineered solution for installation.
- Provide increased performance by utilizing polymer modified adhesive mortars (designed for hanging materials) vs. type S and N mortars (developed for stacking materials).
- Speed up your schedule – faster, easier and cleaner than traditional metal lath/scratch coat method.
- Offer the ability to incorporate an effective water-management system (type and placement of water barrier will vary based on local codes and/or warranties).

Designs you can achieve with this system:

- Use for a variety of building exteriors with manufactured or natural stone and thin brick veneers.

Note: A code-approved Water/Air Resistive Barrier (WRB) must first be installed to protect the cavity. For limitations, please see page 17 (Installation Guide).

Cement Board Stucco Wall System (CBSS)

Combine the strength and durability of PermaBase with the performance and aesthetics of reinforced base coats and textured finishes. Use in residential and low-rise commercial applications.

Cement Board Stucco Wall System is designed to:

- Provide increased impact and weather resistance (appropriate for all climates).
- Resist dirt, fading, cracking and peeling.
- Speed up your schedule – easier, cleaner installation than traditional stucco.
- Provide drainage system to help prevent water from penetrating behind cladding in frame construction.
- Comply with ASTM D226, protecting approved sheathings/structural components and helping to evacuate incidental water.

Designs you can achieve with this system:

- Attachment of special pre-molded shapes.
- Variety of finishes – many texture and color options.

Note: A code-approved Water/Air Resistive Barrier (WRB) must first be installed to protect the cavity. See page 17 (Installation Guide).

More Reasons PermaBase Is Excellent For Exterior Applications

- Allows multiple finishes on one substrate.
- Saves time and labor when compared with field-applied metal lath, brown and scratch coat installations.
- Works rain or shine – less affected by jobsite weather conditions.
- Scores and snaps for quick installation.
- Qualifies for multiple-year system warranties.

PHYSICAL PROPERTIES

Property Method	Test	1/4"	7/16" PLUS	1/2"	5/8"
Water Absorption % By Weight/24 Hours	ASTM C473	<8	10	<8	<8
Flexural Strength (psi)	ASTM C47	>1750	750	750	>1000

Weight (psf)	ASTM C473	1.8	2.1	2.9	3.65
Freeze/Thaw (Cycles) Per ASTM C666 Procedure B	ASTM C666	100	100	100	100
Flame Spread/Smoke Developed	ASTM E84 CAN/ULC-S102	0/0	0/0	0/0	0/0
Compressive Strength (psi) (Indentation)	ASTM D2394	N/A	N/A	1250	1250
Wind Load (psf, Studs 16" o.c.)	ASTM E330	N/A	30	40	40
Thermal "R"/k Value	Property of Material	0.2/2.7	0.28/2.7	0.37/2.7	0.47/.2.7
Bending Radius (ft.)	Property of Material	N/A	5	5	5
Falling Ball Impact (12" Drop)	ASTM D1037	Pass	Pass	Pass	Pass
Linear Variation (Due to change in moisture content)	ASTM D1037	<0.07%	0.05%	0.05%	0.05%
Fungus Resistance	ASTM G21	(No growth)	(No growth)	(No growth)	(No growth)
Mold Growth On Surface	ASTM D3273*	10	10	10	10

*When tested by an independent laboratory per ASTM D3273 ("Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber"), PermaBase achieved a panel score of 10, the highest score possible, indicating no mold growth under the laboratory test conditions. The use of PermaBase in actual installations may not produce the same results as were achieved in controlled laboratory conditions. No material can be considered "mold proof," nor is it certain that any material will resist mold indefinitely.

SIZES AND PACKAGING

Size: Thickness, Width And Length	# Of Pcs Per Unit
PermaBase Cement Board	
1/2" x 32" x 5' (12.7 mm x 813 mm x 1524 mm)	50
1/2" x 32" x 8' (12.7 mm x 813 mm x 2438 mm)	30

PermaBase BRAND PLUS Cement Board

Lighter, Faster And Easier

When You Want The Best Lightweight Rigid Substrate: PermaBase BRAND PLUS Cement Board

This board has the same exceptional qualities built into PermaBase Cement Board but weighs 25% less. When you need to lighten your load, consider PermaBase PLUS for all interior and exterior applications.

Resists Moisture Better

- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Achieves the industry's lowest water-absorption rating (ASTM C473) – offering better installation.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong And Lasts Long

- Resists impact and remains dimensionally stable – extending the life of your project.
- Holds up to the toughest conditions.

Installs Fast And Easy

- Lightweight and easy to cut – speeding up installation.
- Reduces jobsite waste – easier, cleaner cut.
- Patented EdgeTech[MD] Technology allows for a closer edge fastening and reduces damage from handling.

Works For Interior And Exterior Projects

– One Panel, Many Applications

- Great for all interior applications, as well as exterior decks and outdoor kitchens.
- Meets UL & ULC classifications for one- and two-hour fire-rated assemblies.
- Building code approved – one substrate that does the job of many.
- Adhere tile, stone or thin brick directly to PermaBase PLUS in exterior applications – saving time and money.
- Durable substrate for direct-applied coating systems.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.
- 15-Year Limited Warranty: Exterior applications.

PermaBASE BRAND PLUS® Cement Board

SIZES AND PACKAGING

Size: Thickness, Width And Length	# Of Pcs Per Unit
7/16" x 36" x 5' (11.1 mm x 914 mm x 1,524 mm)	60
1/2" x 48" x 8' (12.7 mm x 1,219 mm x 2,438 mm)	40
5/8" x 48" x 8' (15.9 mm x 1,219 mm x 2,438 mm)	32

For installation instructions and accessories, see page 12.

PermaBase BRAND UltraBacker Cement Board

Smoother, Stronger, More Stable

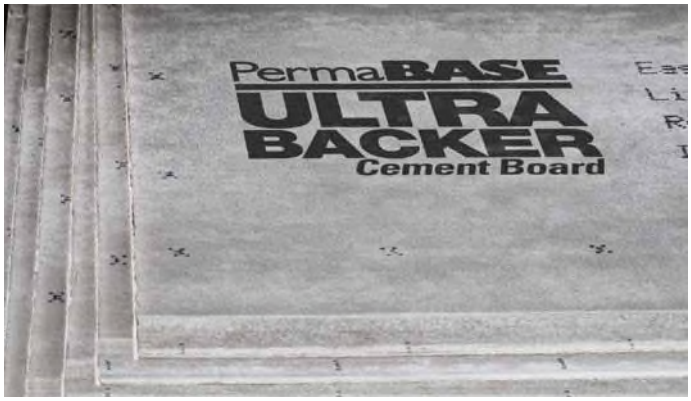
When You Want The Best Rigid 1/4-Inch Underlayment That Buys You More Open Time: PermaBase BRAND UltraBacker Cement Board

UltraBacker features a smooth mesh and mat surface. The 1/4-inch thickness eliminates the need to modify adjacent thresholds when abutting it to carpet, hardwood and other common flooring materials.

Resists Moisture Better Than Any Other Cement Board

- Features the *lowest water-absorption rating of <8%* (ASTM C473) – offering better installation.
- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong And Lasts Long



- Resists impact and remains dimensionally stable – extending the life of your project.
- Holds up to the toughest conditions.
- 30% stronger and four times more rigid than competitive 1/4-inch cement board.

Installs Fast And Easy

- Can be applied over new or existing countertops or as a flooring underlayment – pre-manufactured panels save you time.
- Reduces jobsite waste – easier, cleaner cut.
- Patented EdgeTech[MD] Technology allows for a closer edge fastening and reduces damage from handling.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.

PermaBASE BRAND ULTRA BACKER® Cement Board

SIZES AND PACKAGING

Size: Thickness, Width And Length	# Of Pcs Per Unit
1/4" x 36" x 5' (6.4 mm x 914 mm x 1524 mm)	60

For installation instructions and accessories, see page 12.

PermaBase BRAND Flex Cement Board

Easy To Bend, Yet Stays Strong

When You Want The Best Substrate That Bends Like No Other: PermaBase[MD] BRAND Flex Cement Board

This very flexible PermaBase substrate is ideal to use around archways, columns, beams, or anywhere you need an evenly curved surface. Consider this also for radius shower walls, tub step-ups and stair construction – the possibilities are almost endless.

Resists Moisture Better

- Stays intact when exposed to water: will not rot, disintegrate or swell – built for the long run.
- Achieves the industry's lowest water-absorption rating (ASTM C473) – offering better installation.
- Helps inhibit mold growth with the highest possible score on mold tests (ASTM D3273 and ASTM G21).

Stays Strong Yet Flexes Like No Other Cement Board

- Holds up to the toughest conditions yet bends like no other.
- Resists impact and remains dimensionally stable – extending the life of your project.

Installs Fast And Easy

- Pre-manufactured panels save you time.
- Bends easily – 6" radius at 90°.
- Reduces jobsite waste – easier, cleaner cut.

Offers Best In Class Warranty

- Lifetime Limited Warranty: Interior applications.
- 15-Year Limited Warranty: Exterior applications.

Installation

Installation recommendations for PermaBase Flex are the same as for PermaBase Cement Board with this exception: framing must be spaced a maximum of 8"o.c. (See page 12 for more information.)

Limitations

PermaBase Flex has the same limitations as PermaBase with the following additions:

- For convex surfaces, PermaBase Flex must be applied with the rough surface and tapered edges exposed.
- For concave surfaces, PermaBase Flex must be applied with the smooth surface exposed.
- PermaBase Flex Cement Board should not be used for fire-rated assemblies.
- Maximum framing spacing should not exceed 8"o.c.
- Maximum fastener spacing should not exceed 8"o.c. for wall and 6"o.c. for ceiling applications.

PermaBASE BRAND FLEX® Cement Board

SIZES AND PACKAGING

Size: Thickness, Width and Length	# Of Pcs Per Unit
1/2" x 36" x 6' (12.7 mm x 914 mm x 1829 mm)	25
1/2" x 48" x 8' (12.7 mm x 1219 mm x 2438 mm)*	30

* Special Order

For installation instructions and accessories, see page 12.

Installation Guide

Interior Applications

An ideal substrate for interior applications, such as:

- Shower and tub enclosures
- Garden/whirlpool tubs
- Countertops
- Backsplashes
- Steamrooms and saunas
- Swimming pool and whirlpool decks and enclosures
- Floor underlayment
  - Entryways
  - Kitchens
  - Bathrooms
  - Foyers
  - Laundry rooms

Installation

General: All framing should comply with local building code requirements and be designed to provide support with a maximum allowable deflection of L/360 under all intended loads. Framing members should be spaced a maximum of 16" o.c.

Cut or score PermaBase on printed side of panel. Use a straightedge and pencil to mark line. Use utility knife to score/cut the glass mesh. Snap the board and cut through the now visible glass mesh on the other side. Install tile and tile setting materials in accordance with current ANSI specifications and Tile Council of North America (TCNA) guidelines.

Control Joints: For interior installations, allow a maximum of 30 lineal feet between control joints. A control joint must be installed but not limited to the

following locations: where expansion joints occur in the framing or building (discontinue all cross furring members located behind joint); when boards abut dissimilar materials; where framing material changes; at changes of building shape or structural system; at each story separation. Place control joints at corners of window and door openings, or follow specifications of architect. Control joint cavity shall not be filled with coating or other materials.

Walls And Ceilings

Wall Framing: Edges of PermaBase parallel to framing should be continuously supported. Provide additional blocking when necessary to permit proper PermaBase attachment.

Do not install PermaBase directly over protrusions from stud plane, such as heavy brackets and fastener heads. Studs above a shower floor should either be notched or

Installation Accessories

For a seamless installation, we recommend PermaBase[MD] Tape and PermaBase[MD] Screws.

Fasteners

PermaBase corrosion resistant screws or equivalent, 1-1/4" or 2" long, for use with wood framing. Type S-12 screws or equivalent, 1-1/4" or 1-5/8" long, for use with 20 gauge or heavier steel framing.

Galvanized roofing nails, 1-1/2" long with hot dipped galvanized coating for use with wood framing. Nails should meet Federal Specification #FF-N105B/type 2 style 20.

Joint Reinforcement

PermaBase mesh tape must be used on all edges and cuts made to size. Use 2" wide polymer-coated (alkali resistant) mesh tape for interior applications and 3" wide polymer-coated (alkali resistant) mesh tape for exterior applications.

Bonding Materials

Treat joint and set facing material, preferably with latex-Portland cement mortar or with dry-set (thin-set) mortar. All mortars should comply with ANSI A118.1, A118.4 or A118.15 standards. Type 1 organic adhesive meeting ANSI A-136.1 may be utilized for interior use only.

furred to accommodate the thickness of the waterproof membrane or pan. The surround opening for a tub or precast shower receptor should not be more than 1/4" longer than unit to be installed.

Ceiling Framing: The deflection of the complete ceiling assembly due to dead load (including insulation, PermaBase, bonding material and facing material) should not exceed L/360. The dead load applied to the ceiling frame should not exceed 10 psf. Ceiling joist or furring channel should not exceed 16" o.c. (Edges of PermaBase parallel to framing should be continuously supported.) Provide additional blocking when necessary to permit proper PermaBase attachment.

PermaBase Cement Board: Apply PermaBase with ends and edges closely butted but not forced together. Stagger ends joints in successive courses. Drive fasteners into field of cement board first, working toward ends and edges. Space fasteners maximum 8" o.c. for walls, 6" o.c. for ceilings with perimeter fasteners at least 3/8" and less than 5/8" from ends and edges. Ensure PermaBase is tight to framing.

Fasteners must be installed into framing members. Select proper fastener type and length for the application.

Joint Reinforcement: Trowel bonding material to completely fill the tapered recessed board joints and gaps between each panel. On non-tapered joints apply a 6" wide, approx. 1/16" thick coat of bonding material over entire joint. For all joints, immediately embed 2" alkali resistant fiberglass mesh tape fully into applied bonding material and allow it to cure. For outside corners, 3" wide mesh tape is recommended. Same bonding material should be applied to corners, control joints, trims and other accessories. Feather bonding material over fasteners to fully conceal.

Divider Wall Installation

1. **PermaBase Cement Board**
2. **Membrane**
3. **Latex-Portland Cement Mortar**
4. **Alkali-Resistant Mesh Tape**

Shower Installation

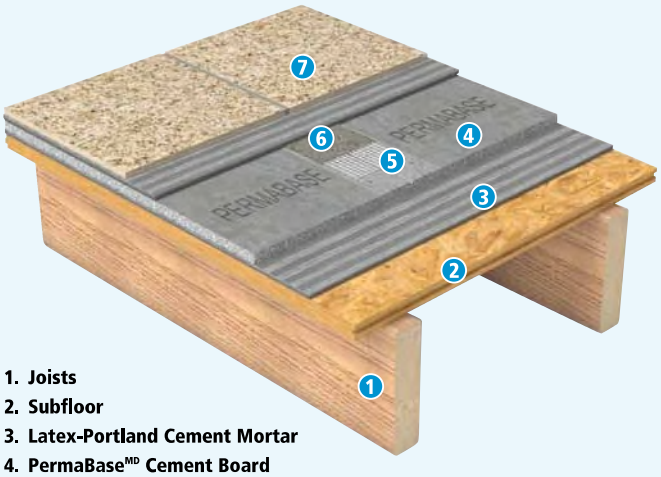
1. **Support Framing 1/4" / 12" slope toward drain**
2. **Plywood, Min. 1/2"**
3. **PermaBase^{MD} Cement Board**
4. **Membrane**
5. **Latex-Portland Cement Mortar**
6. **Alkali-Resistant Mesh Tape**
7. **Sealant**
8. **Tile and Grout**

Floors And Counters

Subfloor Or Base: For flooring applications with 16" o.c. floor joists, 5/8" tongue and groove exterior grade plywood or 3/4" tongue and groove exterior grade OSB may be used. For 19.2" o.c. and 24" o.c. floor joists, 3/4" tongue and groove exterior grade plywood or OSB must be used. Tile size for floors with 24" o.c. floor joists must be 12" x 12" or larger. The joist and subfloor assembly must meet L/360 as well as the appropriate code tables for live and dead loads.

Underlayment: Using a 1/4" square-notched trowel, apply a setting bed of polymer-modified mortar (or thin-set mortar) to the subfloor or counter base. Immediately laminate PermaBase to subfloor or base leaving a 1/8" space between boards at all joints and corners. Leave a 1/4" gap along walls. Stagger all joints so that they do not line up with underlying substrate joints. Fasten PermaBase every 8" o.c. throughout board field and around all edges while setting bed mortar is still workable. Around perimeter of each board, locate fasteners 2" from corners and not less than 3/8" from the edges. Fill all joints solid with bonding material. On non-tapered joints such as butt ends, apply a 6" wide, 1/16" thick coat over the entire joint. For all joints, immediately embed 2" fiberglass mesh tape fully into applied bonding material; ensure that tape is centered over joint. Apply bonding material over fasteners to fully conceal. Remove all excess bonding material and allow to cure.

Limitations



- Joints should be treated with alkali resistant fiberglass mesh tape set in a polymer modified mortar.
- Conventional paper drywall tape, joint compound and drywall nails or screws should not be used.
- Maximum wall framing spacing should not exceed 16" o.c. and must be designed to limit deflection to L/360 under all live and dead loads.
- Steel framing must be 20 gauge (galvanized) or heavier – 16" o.c.
- 1/4" PermaBase and 1/4" UltraBacker should not be used on walls or ceilings.
- PermaBase is not a water barrier. Consult local building code for moisture barrier requirements.
- Not recommended for use with vinyl flooring or carpets.
- For exterior and interior finishes applied directly to PermaBase, reinforcing mesh must be embedded in basecoat. Consult finish manufacturer for additional requirements.
- PermaBase should not be exposed to temperatures over 220°F (105°C).
- PermaBase is not a nailing base for other finishes.

Countertop Installation

1. **Plywood**
2. **Latex-Portland Cement Mortar**
3. **PermaBase^{MD} Cement Board**
4. **Fiberglass Mesh Tape (Alkali-Resistant) Embedded in Mortar**
5. **Latex-Portland Cement Mortar**
6. **Tile and Grout**

Floor Underlayment

1. **Joists**
2. **Subfloor**
3. **Latex-Portland Cement Mortar**
4. **PermaBase^{MD} Cement Board**
5. **Fiberglass Mesh Tape (Alkali-Resistant)**
6. **Latex-Portland Cement Mortar**
7. **Tile**

Exterior Applications

An ideal substrate for exterior applications such as:

- Tile applications
- Stucco applications
- Cement board stucco
- Thin brick
- Adhered stone veneer
- Thin porcelain tile
- Ventilated rainscreen facade
- EIFS
- Soffit panels
- Sheathing panels
- Outdoor kitchens/grills

Installation

General: All framing should comply with local building code requirements and be designed to provide support with a maximum allowable deflection of L/360 under all intended live including wind) and dead loads.

Some applications may require stricter deflection requirements. Consult finish manufacturer for recommendations.

Note: Cut or score PermaBase on rough side of panel.

Control Joints: For exterior installations, allow a maximum of 16 lineal feet between control joints. Consult finish manufacturer for other requirements. For exterior tile applications, control joints should be spaced a maximum of every 12'. A control joint must be installed but not limited to the following locations: where expansion joints occur in the framing or building (discontinue all cross furring members located behind joint); when boards abut dissimilar materials; where framing material changes; at changes of building shape or structural system; at each story separation. Place control joints at corners of window and door openings, or follow specifications of architect. Control joint cavity shall not be filled with coating or other materials.

Walls And Ceilings

Wall Framing: Studs should be spaced a maximum of 16" o.c. Edges/ends of PermaBase parallel to framing should be continuously supported. Provide additional blocking when necessary to permit proper PermaBase attachment. Do not install PermaBase directly over protrusions from stud plane such as heavy brackets or fastener heads.

Ceiling Framing: The deflection of the complete ceiling assembly due to dead load (including insulation, PermaBase, bonding material and facing material) should not exceed L/360. The dead load applied to the ceiling frame should not exceed 10 psf. Ceiling joist or furring channel should not exceed 16" o.c. (Edges of PermaBase parallel to framing should be continuously supported.) Provide additional blocking when necessary to permit proper PermaBase attachment.

Water Barrier: While PermaBase is unaffected by moisture, a Water/Air Resistive Barrier (WRB) must be installed to protect the cavity. The type and specific placement or location of the water barrier will vary based on local building codes and/or manufacturers warranties. Consult the WRB manufacturer's recommendations for specific installation guidelines.

PermaBase Cement Board: Apply PermaBase with ends and edges closely butted but not forced together. Stagger end joints in successive courses. Drive fasteners into field of cement board first, working toward ends and edges. Space fasteners maximum 8" o.c. for walls, 6" o.c. for ceilings with perimeter fasteners at least 3/8" and less than 5/8" from ends and edges.

Joint Reinforcement: Trowel bonding material to completely fill the tapered recessed board joints and gaps between each panel. On non-tapered joints apply a 6" wide, approximately 1/16" thick coat of bonding material over entire joint. For all joints, immediately embed 3" alkali resistant fiberglass mesh tape fully into applied bonding material and allow to cure. Same bonding material should be applied to corners, control joints, trims or other accessories. Feather bonding material over fasteners to fully conceal.

Decks

Subfloor: Plywood should be securely glued and fastened to floor joists spaced a maximum of 16"o.c. Subfloor should be sloped at a minimum pitch of 1/4" per foot. The floor surface should be true to plane within 1/8" in 10'.

Underlayment: Using a 1/4" square-notched trowel, apply a setting bed of Latex-Portland cement mortar to the subfloor. Immediately laminate PermaBase to subfloor leaving a 1/8" space between boards at all joints and corners. Leave a 1/4" gap along walls. Stagger joints so they do not line up with underlying substrate joints. Fasten PermaBase every 8" o.c. throughout board field and around all edges while setting bed mortar is still workable. Around perimeter of each board, locate fasteners 2" from the corners and not less than 3/8" from the edges. Fill all joints solid with bonding material. On non-tapered joints such as butt ends, apply a 6" wide, 1/16" thick coat over the entire joint. For all joints, embed alkali-resistant fiberglass mesh tape fully into applied bonding material; ensure that tape is centered over joint. Apply bonding material over fasteners to fully conceal. Remove all excess bonding material and allow it to cure.

Waterproof Membrane: Trowel apply waterproof membrane to the entire surface of the cement board, following membrane manufacturer's installation instructions in detail.

Water-Managed, High-Impact Resistant Wall System

Cement Board Ventilated Rainscreen Façade System

Description

The Cement Board Ventilated Rainscreen Facade System is a water managed exterior cladding wall system designed to provide increased high impact and weather resistance and improved dimensional stability.

The Cement Board Ventilated Rainscreen Facade System combines the strength and durability of PermaBase Cement Board with the performance and beauty of reinforced base coats and textured finishes. It includes specific components such as wood or metal furring, latex-modified Portland cement base coat, glass fiber mesh, trims, primer and acrylic textured finish coat. It provides unequaled protection against water penetration and weathering.

The Cement Board Ventilated Rainscreen Facade System allows you to enclose and finish a project in as little as two days, speeding occupancy. It has already been satisfactorily used for over 25 years on thousands and thousands of square meters of exterior walls.

Uses

For all your exterior walls needing high-impact and weather resistance in commercial, institutional and residential applications.

Advantages

Durability/Strength: PermaBase Cement Board provides an exceptionally hard, durable surface that is able to withstand prolonged exposure to moisture and has a proven durability in cold climates.

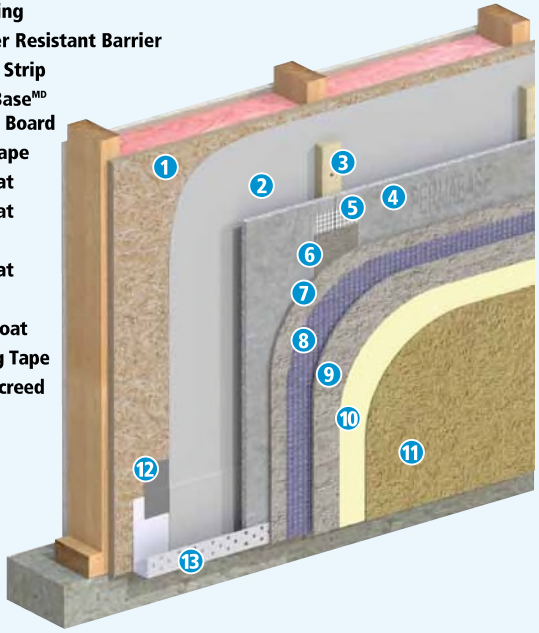
PermaBase offers a competitive advantage over similar products on the market with its patented EdgeTech[MD] technology. The tapered, reinforced edge design allows for closer nail or screw application to the edge.

Weather Resistance: Acrylic finishes repel weather at the system's surface.

Water-Managed Design: The water-managed design of the system provides positive drainage directly behind the cladding, enabling the escape of incidental water that might enter around or through window or door openings and penetrate behind the cladding in frame construction. It also provides air pressure equilibrium, minimizing the chances of water being driven into the wall cavity by incidental building envelope pressure differential.

Design Options: Cement Board Stucco provides the popular stucco look, including the attachment of special pre-molded shapes and a wide variety of finish texture and color options in standard colors and custom colors.

Contact exterior coatings manufacturer for color and installation instructions.



Some exterior wall assemblies including the PermaBase boards were tested according to CAN/ULC-S101. Consult ULC's online directories for details.

Limitations

- Boards shall never be fastened directly on studs.
- Thin veneer construction will tend to reveal planar irregularities in the frame construction.
- Minor cracking at joints might become visible in the finished exterior surface.
- For exterior finishes applied direct to PermaBase, reinforcing mesh must be embedded in basecoat. Consult Unifix's website to get the latest exterior cladding system complete architectural specifications and for detailed installation instructions.
- The cavity between the PermaBase Cement Board and the intermediate sheathing or the insulation board must allow for venting to the exterior, at the bottom and at the top of the wall, in order to provide efficient water drainage and humidity management.

Cement Board Masonry Veneer Wall System (CBMV)

PermaBase as a component of CBMV Systems

The use of adhered manufactured stone and thin brick masonry veneers is increasing in popularity. Cement Board Masonry Veneer Wall Systems (CBMV) have been designed to offer complete, engineered solutions for the installation of manufactured and natural stone masonry veneer, as well as thin brick veneers.

These systems have been developed and are marketed by various manufacturers of the adhering materials used to install them as well as the veneer manufacturers themselves. CBMV Systems offer increased performance by utilizing polymer modified adhesive mortars which have been designed for hanging materials versus type S and N mortars that were primarily designed for stacking materials. In some cases these systems offer warranties.

Several of these systems call for the use of an ASTM C1325 cement board. In addition to meeting this requirement, the features and benefits of PermaBase Cement Board make it an ideal component for use in these systems.

Advantages

Durability/Strength: PermaBase Cement Board provides an exceptionally hard, durable surface that is able to withstand prolonged exposure to moisture and has a proven durability in cold climates.

Consistency: PermaBase is produced in a factory controlled environment which provides for a consistent product produced within tighter tolerances than can be achieved with field fabricated substrates.

Cutting and Handling: PermaBase is produced with its patented EdgeTech technology. The tapered, reinforced edge design allows for fastening of nails or screws closer to the edge without crumbling or spinout. The homogeneous core provides a very clean score and snap using a standard drywall knife.

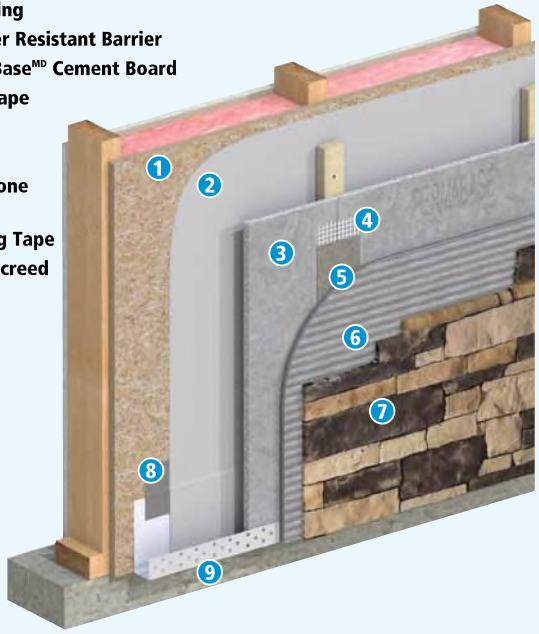
Low Water Absorption: PermaBase has the lowest water absorption of any cement board which provides greater open time and increased workability of the adhering materials used in the application of veneer products.

Limitations

The system shall be engineered to withstand all applicable loads, including live, dead, seismic, positive and negative, etc. CBMV Systems utilize a primary sheathing beneath the PermaBase Cement Board to provide required structural performance. The selection and installation of this sheathing varies according to the type of wall construction.

In the case of exterior walls only, the CBMV Wall System shall not exceed 3 meters (9.8') in height above the foundation walls. Do not use the CBMV System to make soffits or use underground or in frequently submerged areas. Make sure to follow the latest national, provincial or local building code regulations.

Consult Unifix's website to get the latest exterior cladding system complete architectural specifications and for detailed installation instructions.



The details provided give a general sense of representative CBMV Systems only.

Water Resistant Barriers (WRB)

While PermaBase is unaffected by moisture, a water resistant barrier (WRB) must be installed to protect the cavity. One of the advantages of CBMV Systems is the ability to incorporate an effective, accountable water management system. The type and specific placement of the water barrier will vary based on local building codes and/or manufacturers warranties.

This section of the PermaBase Construction Guide provides information on how to utilize PermaBase within both a CBMV System and a Ventilated Rainscreen Facade System. While some typical examples are shown (right) for reference purposes, the specifications and details on how to design and construct individual systems should be obtained from the design professional, or the adhering material or veneer manufacturer of the materials that are being used to complete the system.

For more information go to: **unifixinc.com/applications**

Heat Shield Applications

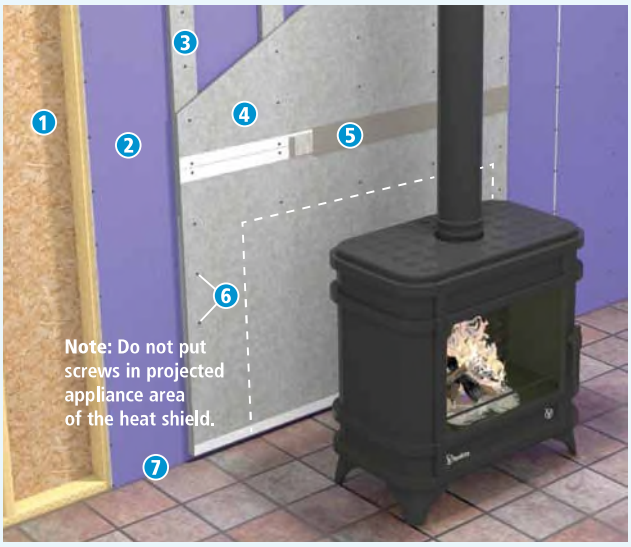
Features/Benefits

- Protects walls and floors.
- Reduces clearance in back up to 40%.
- Lightweight and easy to install.
- CAN/ULC- S632 & UL1618 tested.

Limitations: Do not apply combustible finishes, such as wallpaper, on the panel surface.

Installation

The heat shield made with PermaBase boards can reduce the required clearance between a heat producing appliance and the wall by up to 40%, except where the clearance includes provision for access or ventilation.



Furring is made by cutting a full PermaBase panel into 4" (100 mm) wide strips. Attach a double layer of these furring strips to the wall studs using cement board screws which provide a minimum penetration of 3/4" (19 mm) into the framing. When installing the panels, leave a minimum 2" (50 mm) gap at the ceiling and a 1"- 2" (25-50 mm) gap at the floor.

Fasten the PermaBase panels to the studs with galvanized roofing nail or cement board screws spaced 8" (200 mm) o.c. Be sure your cement board screws are long enough to go through the furring and into the studs at least 3/4" (19 mm). Do not put any nails or screws into the wall area directly behind the proposed location of the appliance.

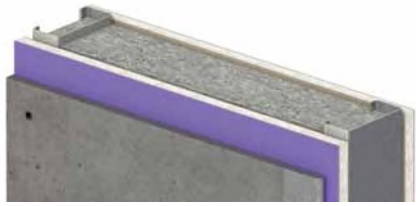
Finish the joints with polymer modified Portland cement mortar and alkali resistant fiberglass tape. Cover fasteners with the same mortar. The mortar should be dry before applying any decorative coating.

Heat build-up is reduced by allowing air to enter and exit the cavity between the wall and the heat shield. This air space is required for the good functioning of the heat shield. Do not close or block these openings.

Heat Shield Installation

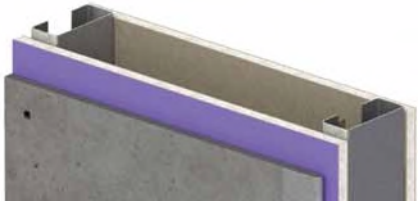
1. **Studs Spaced 16 in. o.c.**
2. **Existing Gypsum Board**
3. **Two Layers 4 in. wide Furring Strips**
4. **PermaBase[MD] Heat Shield**
5. **Joint Treatment**
6. **Fasteners Spaced 8 in. o.c. Maximum**
7. **1-2 in. Minimum Clearance from the Floor**

PermaBase[MD] heat shielding permits clearance reduction up to 40 percent of the manufacturer's suggested clearance.



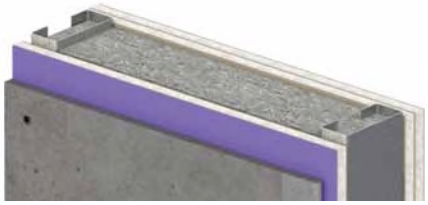
UL Listed PermaBase[MD] Cement Board Partitions – Steel Framing

1-hour Fire Rating
V452 UL Design



7/16" PermaBase PLUS or 1/2" PermaBase applied vertically or horizontally to one side of 3-5/8" steel studs 16" o.c. 5/8" Fire-Shield Gypsum Board applied vertically to opposite side. 3" mineral wool insulation in stud cavities.

1-hour Fire Rating
U425 UL Design



7/16" PermaBase PLUS or 1/2" PermaBase applied vertically or horizontally over 5/8" Fire-Shield Gypsum Board applied vertically to each side of 3-1/2", 20-gauge steel studs 16" o.c. PermaBase secured to studs with cement board screws of adequate length to penetrate studs 3/8" spaced 8" o.c.

1-hour Fire Rating
V438 UL Design

7/16" PermaBase PLUS or 1/2" PermaBase applied vertically or horizontally over 5/8" Fire-Shield Gypsum Board applied vertically to each side of 3-5/8" steel studs 16" o.c. PermaBase secured to studs with cement board screws of adequate length to penetrate studs 3/8" spaced 8" o.c.

2-hour Fire Rating
V452 UL Design

7/16" PermaBase PLUS or 1/2" PermaBase applied vertically over 1/2" Fire-Shield C or 5/8" Fire-Shield Gypsum Board, applied vertically to one side of 3-5/8" steel studs 16" o.c. 2 layers 1/2" Fire-Shield C or 5/8" Fire-Shield Gypsum Board applied vertically to opposite side. 3" mineral wool insulation in stud cavities.

PermaBase Over Foundation Walls

Installation

The 1/2" PermaBase boards can be installed below ground level over extruded polystyrene boards that are themselves installed over a foundation wall, under the following conditions.

1. That the PermaBase boards be fully supported, over their entire surface, by the polystyrene boards.

2. That the PermaBase boards be installed using our specially designed PermaBase screws, every 8" o.c. (200 mm), over furring channels (wood or galvanized metal 20 gauge or thicker) that comply with the following requirements:

a. That the furring strips be spaced at a maximum of 24" (610 mm) o.c.

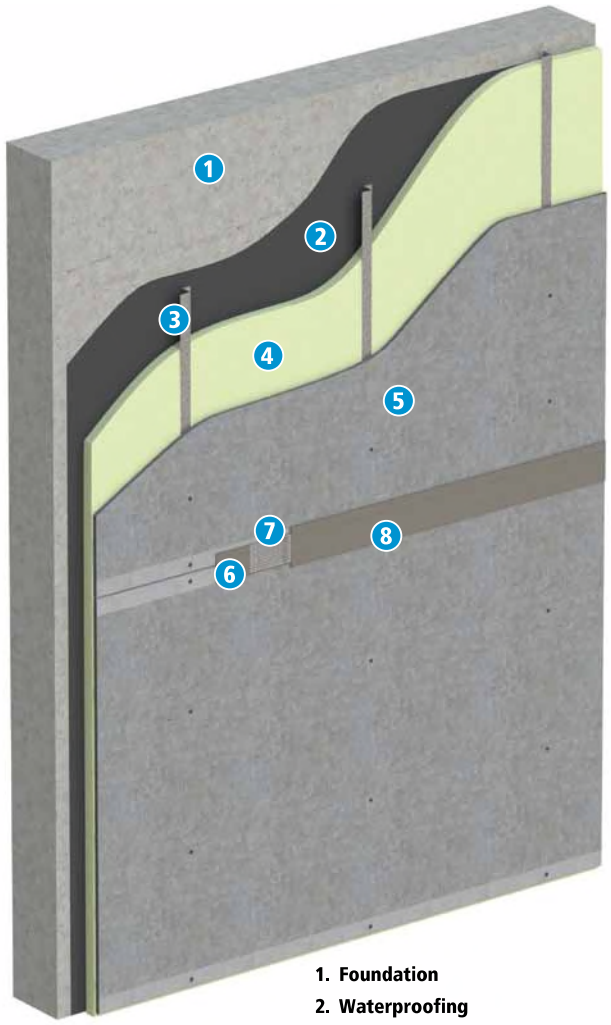
b. That the furring strips have the same thickness (or depth) as the polystyrene board.

c. That the furring strips be in full contact with the foundation wall.

d. That the furring strip be affixed to the foundation wall with the proper fasteners and in sufficient number to provide an adequate support for the board, its finish and other building loads.

e. That the furring strips be corrosion or rot proof.

3. That the extruded polystyrene boards be approved for exterior use, below ground and that they have a compressive strength of 20 psi (140 kPa) or higher when tested according to ASTM D1621.



4. That the PermaBase boards are installed below ground at a maximum depth of 10' (3 m).

5. That the water table level be at all times be below the base of the foundation wall.

6. That the base of the foundation wall be properly drained in order to avoid any accumulation of water and consequently an added pressure on the wall.

7. That the wall design be in conformance with the applicable and most up to date local, provincial, and federal building codes where the project is located.

Limitations: The PermaBase boards are resistant to water but are not water impermeable or waterproof and cannot be considered a vapor barrier. Where a wall or cavity must be kept dry, use proper water resistant membranes, in conformance with the applicable and most up to date local, provincial, and federal building codes where the project is located. Some waterproofing compounds, sealants, or adhesives may contain solvents or petroleum distillates. These may damage the polystyrene. Please contact the manufacturers of these products to verify their compatibility with polystyrene and concrete. The PermaBase boards are not structural boards.

LIMITED WARRANTY AND REMEDIES

Products manufactured and sold by National Gypsum Company are warranted by National Gypsum Company to its customers to be free from defects in materials and workmanship at the time of shipment. THIS EXPRESS WARRANTY IS THE ONLY WARRANTY APPLICABLE TO SUCH PRODUCTS, AND IS IN LIEU OF AND EXCLUDES ALL OTHER EXPRESS ORAL OR WRITTEN WARRANTIES AND ALL IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

National Gypsum Company will not be liable for any incidental, indirect or consequential losses, damages or expenses. The customer's exclusive remedy for any type of claim or action for defective products will be limited to the replacement of the products (in the form originally shipped) or, at National Gypsum's option, to a payment or credit not greater than the original purchase price of the products.

National Gypsum Company will not be liable for products claimed to be defective where the defect resulted from causes not within National Gypsum's control, or which arose or occurred after shipment, including but not limited to accidents, misuse, mishandling, improper installation, contamination or adulteration by other materials or goods, or abnormal conditions of temperature, moisture, dirt or corrosive matter.

Any claim that products sold by National Gypsum Company were defective or otherwise did not conform to the contract of sale is waived unless the customer submits it in writing to National Gypsum within thirty (30) days from the date the customer discovered or should have discovered the defect or nonconformance. No legal action or proceeding complaining of goods sold by National Gypsum may be brought by the customer more than one year after the date the customer discovered or should have discovered the defect or problem of which it complains.

Mold And Mildew Resistance

PermaBase was designed to provide extra protection against mold and mildew. When tested by an independent laboratory, PermaBase received the highest possible ratings on ASTM G21 and D3273. The use of PermaBase in actual installations may not produce the same results as were achieved in controlled laboratory conditions. No material can be considered "mold-proof," nor is it certain that any material will resist mold or mildew indefinitely. When used in conjunction with good design, handling and construction practices, PermaBase can provide increased mold resistance. As with any building material, avoiding water exposure during handling, storage and installation, and after installation is complete, is the best way to avoid the formation of mold or mildew.

Section 1: Product and Company Identification

Product Name
PermaBase® BRAND Cement Board Products

Product Identifiers

PermaBase	***PermaBase UltraBacker***	***PermaBase DEK***
PermaBase Flex	***PermaBase Plus***	

Other means of identification
Tile Backer Board, Cementitous Backer Board (CBU)

Recommended Use
Underlayment for ceramic tile on floors, countertops, EIFS systems. Use per manufacturer's recommendations.

Restrictions on Use
Use in well-ventilated area and avoid breathing dust.
Avoid skin contact.

Section 2: Hazards Identification

United States (US)
According to OSHA 29CFR 1910.1200 (HCS)

GHS Classification of the substance or mixture
Carcinogenicity - Category 1A - (H-350)
Specific target organ toxicity, repeated exposure – Category 1 (H-372)
Acute toxicity, inhalation - Category 4 (H-332)
Skin corrosion/irritation Category 2 (H315)
Serious eye irritation – Category 2A (H-319)

GHS Label Elements
Pictogram

Signal Word **Danger**

Hazard Statements

H-350	May cause cancer.
H-332, 372	Harmful if inhaled. Causes damage to organs (lungs) through prolonged or repeated exposure.
H-315, 319	Causes skin irritation and serious eye irritation

Precautionary Statements
Prevention
Obtain special instructions before use.
Do not handle until all safety precautions have been read and understood.
Do not breathe dust.
Use personal protective equipment as required. (See Section 8)
Use engineering controls and wet methods to minimize dust.

Section 2: Hazards Identification (Continued)

Response
If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing.
If on skin, wash with plenty of soap and water. If skin irritation occurs, get medical attention.
If in eyes, rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
Get medical attention if exposed or concerned.

Storage
Store material in a cool, dry, ventilated area, away from excessive heat or sunlight.

Disposal
Dispose of material in accordance with federal, state, and local regulations.

Section 3: Composition/Information on Ingredients

Chemical Name	Common name/ Synonym	Identifiers CAS Number	% (weight)	Impurities
Silicon Dioxide (SiO_2)	Sand, quartz	14808-60-7	<50	
In CANADA- Calcium Carbonate	Limestone, industrial sand	1317-65-3	<50	Crystalline silica (CAS # 14808-60-7)
Mixture-calcium and aluminum silicates	Portland Cement	65997-15-1	<25	Crystalline silica (CAS # 14808-60-7)
Mixture-silicates, aluminates	Pozzolan, fly ash	68131-74-8	<25	Crystalline silica (CAS # 14808-60-7)
Mixture-calcium aluminates	High Alumina Cement	65997-16-2	<6	Crystalline silica (CAS # 14808-60-7)
Mixture-calcium, aluminum silicates, amorphous silica	Fiberglass scrim or fiberglass mat laminate	65997-17-3	<5	
Calcium Hydroxide	Hydrated lime	1305-62-0	<2	Crystalline silica (CAS # 14808-60-7)

Section 4: First-Aid Measures

Inhalation Remove exposed individual to fresh air immediately. If breathing difficulty persists, seek medical attention.

Eye contact Do not rub or scratch eyes. Immediately flush eyes with water for 15 minutes.
Remove contact lenses (if applicable). Seek medical attention if irritation persists.

Skin contact Flush and wash skin with soap and water. Utilize lotions to alleviate dryness if present. Seek medical attention if irritation persists.

Ingestion This product is not expected to be hazardous and no harmful effects are expected upon ingestion of small amounts. Larger amounts may cause abdominal discomfort or possible obstruction of the digestive tract. Seek medical attention if problems persist.

Medical Conditions aggravated by exposure
Pre-existing upper respiratory and lung diseases such as, but not limited to, bronchitis, emphysema and asthma. Pre-existing skin diseases such as, but not limited to, rashes and dermatitis.

Most important symptoms/effects, acute and delayed: See Section 11. (Toxicological Information)

Section 5: Fire-Fighting Measures

Extinguishing Media
Dry chemical, foam, water, or extinguishing media appropriate for surrounding fire.

Unusual Fire and Explosion Hazards
Mixture poses no fire-related hazard.

Special hazards arising from the mixture
None known

Special Protective Equipment and Precautions for Firefighters
A SCBA is recommended to limit exposures to combustion products when fighting any fire.

Section 6: Accidental Release Measures

Personal precautions, protective equipment and emergency procedures
Product is an article composite.
General recommendations:
Wear appropriate Personal Protective Equipment. (See Section 8)
Maintain proper ventilation.

Environmental precautions
This product could be toxic to fish due to its high alkalinity from the Portland Cement.
Dispose of in accordance with applicable federal, state, and local regulations.

Methods and materials for containment and cleaning up
Pick-up larger pieces to avoid a tripping hazard.
Sweep or vacuum remaining material into a waste container for disposal.
Use a light water spray to minimize dust generation.

Section 7: Handling and Storage

Precautions for safe handling
Avoid breathing dust.
Minimize generation of dust.
Provide appropriate exhaust ventilation at places where dust is formed.
Avoid contact with eyes, skin and clothing.
Wear recommended personal protective equipment when handling. (See Section 8)

Conditions for safe storage, including any incompatibilities
Store material in a cool, dry, ventilated area, away from excessive heat or sunlight.
Store panels flat to minimize damage.
Do not stack panels too high when storing to minimize the risk of falling.
Avoid contact with strong acids.

Section 8: Exposure Controls/Personal Protection

Control Parameters

	Exposure Limits	
Component	**OSHA PEL (mg/m3)**	**ACGIH TLV (mg/m3)**
Portland Cement	15 (T) 5 (R)	10 (T)
High Alumina Cement	15 (T) 5 (R)	10 (T)
Pozzolan	15 (T) 5 (R)	10 (T)
Sand	[(10) / (%SiO2+2)] (R); [(30) / (%SiO2+2)] (T)	0.025 (R)
Crystalline Silica (Quartz)[1]	[(10) / (%SiO2+2)] (R); [(30) / (%SiO2+2)] (T)	0.025 (R)
Fiberglass Scrim	15 (T) 5 (R)	1 f/cc (R)
Calcium Hydroxide (Hydrated Lime)	15 (T) 5 (R)	5 (R)
Calcium Carbonate	15 (T) 5 (R)	10 (T)

1 – Present as an impurity in raw materials
T- Total Dust
R- Respirable Dust

Exposure Controls

Appropriate Engineering Controls

Work/Hygiene Practices: Utilize methods to minimize dust production. Utilize wet methods, when appropriate, to reduce generation of dust.

Ventilation: Provide local and general exhaust ventilation sufficient to maintain a dust level below the PEL/TLV.

Personal Protective Equipment

Respiratory Protection

A NIOSH approved particulate respirator is recommended in poorly ventilated areas or if the PEL/TLV is exceeded. OSHA's 29 CFR 1910.134 (Respiratory Protection Standard) must be followed whenever work conditions require respirator use.

Eye Protection

Safety glasses or goggles.

Skin

Gloves, protective clothing and/or barrier creams may be utilized if conditions warrant.

Section 9: Physical and Chemical Properties

(a) Appearance: Gray solid
(b) Odor: Slight organic odor upon opening that dissipates quickly.
(c) Odor threshold: Not available
(d) pH : ~12
(e) Melting point/freezing point: Not Available
(f) Initial boiling point and boiling range: Not Available
(g) Flash point: Not available
(h) Evaporation rate: Not available
(i) Flammability (solid, gas): Not flammable
(j) Upper/lower flammability or explosive limits: Not available
(k) Vapor pressure: Not available
(l) Vapor density: Not available
(m) Relative density: ~1.2
(n) Solubility(ies): Slightly soluble in water
(o) Partition coefficient: n-octanol/water: Not available
(p) Auto-ignition temperature: Not available
(q) Decomposition temperature: Unknown
(r) Viscosity: Not available
(s) VOC (Volatile Organic Compound): N/A

Section 10: Stability and Reactivity

(a) Reactivity: No data available
(b) Chemical stability: Stable in dry environments
(c) Possibility of hazardous reactions: None known
(d) Conditions to avoid (e.g., static discharge, shock, or vibration): Contact with strong acids.
(e) Incompatible materials: Strong acids
(f) Hazardous decomposition products: None known.

Section 11: Toxicological Information

Information on Toxicological effects

Information on likely routes of exposure

Ingestion	May cause gastrointestinal irritation.
Inhalation	Dust may irritate respiratory system. Chronic exposure may result in lung disease. (See below)
Skin contact	May cause irritation, itching or dermatitis. (See below)
Eye contact	Contact with dust may cause mechanical irritation.

Symptoms related to the physical, chemical and toxicological characteristics
Acute exposure to airborne dust concentrations in excess of the PEL/TLV may result in coughing, dyspnea, wheezing, and a burning irritation of the nose, throat, and upper respiratory tract, along with possible impaired pulmonary function. Chronic exposures may result in lung disease. (Silicosis and/or lung cancer)
Contact with wet Portland Cement may cause severe irritation, redness, and possible burns. Continued and prolonged contact may result in drying of the skin. Contact with dust or glass fibers may produce itching, rash and/or redness. Repeated or prolonged exposure may result in dermatitis.

Toxicological data
No toxicological data is available for this product. Toxicological information for components of this product listed below.

Acute toxicity	Not available
Skin corrosion/irritation	Not available
Serious eye damage/eye irritation	Not available
Skin sensitization	Not available
Respiratory sensitization	Not available
Sensitization	Not available
Mutagenicity	Not available
Carcinogenicity	Not available

This product contains crystalline silica. (quartz) The International Agency for Research on Cancer (IARC) classifies crystalline silica inhaled in the form of quartz or cristobalite from occupational sources as carcinogenic to humans, Group 1. The National Toxicology Program (NTP) classifies respirable crystalline silica as a substance which may be reasonably anticipated to be a carcinogen. OSHA does not regulate crystalline silica as a human carcinogen.

Reproductive effects	Not available
Specific target organ toxicity – single exposure	Not available
Aspiration toxicity	Not available

Section 12: Ecological Information

(a) Ecotoxicity (aquatic and terrestrial, where available): This product could be toxic to fish due to its high alkalinity from the Portland Cement. No studies are available.
(b) Persistence and degradability: Unknown
(c) Bioaccumulative potential: Unknown.
(d) Mobility in soil: Unknown
(e) Other adverse effects (such as hazardous to the ozone layer): None known

Section 13: Disposal Considerations

This material is not considered a hazardous waste. Dispose of according to Local, State, Federal, and Provincial Environmental Regulations.

Section 14: Transport Information

This product is not a DOT hazardous material
Shipping Name: Same as product name
ICAO/IATA/IMO: Not applicable

Section 15: Regulatory Information

All ingredients are included on the TSCA inventory.
Federal Regulations
SARA Title III: Not listed under Sections 302, 304, and 313
CERCLA: Not listed
RCRA: Not listed
OSHA: Dust and potential respirable crystalline silica generated during product use may be hazardous.

State Regulations
California Prop 65: Respirable crystalline silica is known to the state of California to cause cancer.
Canada WHMIS
All components of this product are included in the Canadian Domestic Substances List (DSL).
Crystalline silica: WHMIS Classification D2A

- Aucun temps d'induction nécessaire

Application :

- Mélanger la Partie A et Partie B indépendamment avant de les mélanger ensemble.
- Combiner les 2 parties ensemble en ratio 3 :1 (vendu en kits) en mélangeant mécaniquement à basse révolution pendant au moins 2 minutes jusqu'à ce que le mélange ait une consistance uniforme
- Utiliser un mesh 100 pour le filtre
- S'assurer que le taux d'humidité ambiante est en dessous de 80%.
- Appliquer sur le primer en système « wet-on-wet » après 1 heure seulement, et dans un maximum de 6 heures sinon il y aura délamination entre les 2 produits.
- Le produit sera prêt à manipuler après 1 à 3 heures dépendant de la chaleur ambiante.

ÉPAISSEURS :
Appliquer entre <u>4 et 5 mils humide</u>
Vous obtiendrez entre 2.6 et 3.2 mils sec (DFT)

MÉTHODE DE PRISE DE MESURE D'ÉPAISSEUR DE PEINTURE

SELON SSPC-PA2

STANDARD DE BASE

- 3 relevés dans un rayon de 4cm à 5 endroits différents pour chaque surface de 100pi2
- Les relevés doivent être mesurés à maximum de 1po d'un rebord
- Total de 15 relevés individuels pour établir 1 mesure
- Un minimum de 5 relevés doit être dans le spectre de DFT requis par la spécification
- Aucun relevé peut représenter une valeur de :
    - Moins de 80% du DFT requis par la spécification
    - Plus de 120% du DFT requis par la spécification
- Si la moyenne des relevés indique une mesure acceptée par la spécification, passer à une autre pièce
- Si la moyenne des relevés indique une mesure hors spécification, la pièce ne doit pas être acceptée par le chargé de projet.

STANDARD SELON GRANDEUR DES SURFACES

- Pour les surfaces de moins de 1000pi2, sélectionner au hasard 3 endroits de 100pi2 et effectuer les prises de mesures conformément au standard de base mentionné ci-haut (45 relevés)
- Pour les surfaces de plus de 1000pi2, mesurer le premier 100pi2 conformément au standard de base mentionné ci-haut (45 relevés), et effectuer par la suite 1 seule mesure (15 relevés) pour chaque section de 100pi2 suivante.
- Lorsqu'une anomalie est détectée, reculer de section (100pi2) et prendre des relevés conformément au standard de base pour les surfaces de moins de 1000pi2 (5 spots de 3 relevés à 3 endroits différents = 45 relevés) jusqu'à ce que les sections respectent la spécification.
- Refaire les pièces défectueuses et recommencer.

LEXIQUE :

Relevé : Prise de mesure individuelle avec la jauge électronique à un endroit précis
Mesure : C'est la mesure du DFT utilisé pour le résultat final. Il est calculé en faisant moyenne des relevés.
DFT : Épaisseur de peinture sèche (dry film thickness)

TECHNICAL DATA
EF75122

Description

EF75122 is a grey, high solids, 2.8 VOC, epoxy primer. It is designed to fill blast profiles in a single coat. No induction time is required.

Mixed Coating Properties

Mix Ratio	4 Parts base to 1 Part epoxy part 2
VOC	
EF75060P2	3.00 lbs / gal or 360 grams / litre
EF75061P2	2.80 lbs / gal or 336 grams / litre
Volume Solids	
EF75060P2	57.61%
EF75061P2	60.64%
Sag	
Airless	12 - 15 mils
Air Assist Airless	12 - 15 mils
Air Spray	12 - 15 mils
HVLP	12 - 15 mils
Viscosity @ 70°F (21°C)	25 - 30 Seconds Zahn#2 / 300 cps
Pot Life @ 77°F (25°C)	
EF75060P2	5.00 hours
EF75061P2	4.00 hours
Salt Spray (B1000)	3000 hours @ 4 mils DFT
Theoretical Coverage	
EF75060P2	924 ft^2 / gal (22.6 m^2 / litre) @ 1 mil DFT
EF75061P2	972 ft^2 / gal (23.8 m^2 / litre) @ 1 mil DFT

DFT = Dry Film Thickness

Product Weight - *Container weight not included*

EF75122P1 base	13.82 lbs / gallon or 1.656 kg / litre
EF75060P2 standard cure	7.58 lbs / gallon or 0.909 kg / litre
EF75061P2 fast cure	7.76 lbs / gallon or 0.930 kg / litre

Shelf Life

Shelf Life is applicable only for material stored in unopened and undamaged original factory filled containers at 4°to 38°C (39°to 100°F).

EF75122P1	1 year	EF75060P2	2 years
		EF75061P2	2 years

Subject to reinspection. Store unused material in tightly closed containers. Contents of partially filled containers may show surface skinning after storage. If skinning forms, remove by straining before use.

BENEFITS

- excellent edge coverage
- exceptional corrosion resistance
- excellent adhesion
- excellent sprayability
- humidity resistance

USES

- power transmission & distribution equipment
- containment tanks
- OEM - chemical tankers & trailers
- OEM - oil patch applications
- OEM - fleet applications

TECHNICAL DATA
EF75122

Surface Preparation

SSPC – SP6 Commercial Blast minimum recommended or a minimum of 3-stage to 7-stage phosphate cleaning system.

Mixing Instructions

1) Pre-Mix EF75122P1 Base for 2 minutes with an air-operated Jiffy Mixer®, or equivalent, to produce a uniform consistency within its container

2) Properly ratio material at 4:1 (by volume):

4 Parts EF75122P1 Base to
1 Part EF75060P2 Standard Cure Epoxy Part 2 or
1 Part EF75061P2 Fast Cure Epoxy Part 2

3) Mix material for 3 minutes with an air-operated Jiffy Mixer®, or equivalent, to a uniform consistency before use

4) No induction time required

5) No Thinning required

6) Filter through 100 mesh in line filter

Application Instructions

Application Temperature

Minimum	55℉ (10℃)
Maximum	100℉ (38℃)

Equipment Settings

Air Spray:	pot pressure:	10 – 20 psi
	atomizing air:	45 – 65 psi
	nozzle set:	1.4 – 1.8
Airless Spray:	fluid pressure:	2000 - 2500 psi
	tip size:	.013 - .019
Air Assist Airless:	fluid pressure:	700 - 1500 psi
	atomizing air:	20 – 60 psi
	tip size:	.013 - .019

- Precision plural component equipment is recommended. All spray equipment including lines and filters must be kept clean at all times to avoid nozzle plugging. When hand mixing follow /Mixing Instructions' procedures.
- Apply in wet coats making even parallel passes. Overlap each pass 50% to minimize holidays, bare areas and pinholes.
- Excess wet film will cause sags and runs.

Recommended dry film thickness is 3 mils above profile.

If thinners are required: *Please contact your Guertin Representative for recommendations.*

Note: Successful application requires following the recommended temperature, humidity conditions and film thickness ranges.

Recoat Window for best D.O.I.

Substrate Temp	70℉ (21℃)
Over Itself	up to 3 days
With Urethane Topcoat	4 hours up to 24 hours
With Super-Shield® Topcoat	1 hour to 4 hours

Flash times:
Allow a minimum of 4.0 hours flash off time before applying a two-component urethane topcoat. Higher film builds (>4mils) and/or cooler temperatures will require longer flash times.

The epoxy primer can be recoated with itself up to 3 days. After 3 days the epoxy primer must be scuff sanded.

It can be topcoated with 2K urethane and Super-Shield® topcoats up to 24 hours. After 24 hours the epoxy primer must be scuff sanded.

It is recommended to apply at ambient air and surface temperatures between 55°- 100℉ (10°- 38℃). App ly at a relative humidity level below 80%.

Surface temperature must be at least 5℉ (3℃) abov e the dew point to ensure that moisture condensation does not occur during application and the drying period.

Higher/lower temperatures & humidity, film thickness, improper activator range and poor air movement will affect the dry time and recoat window.

Equipment Cleanup

Clean application equipment with Guertin's SP02859T0 or SP05127T0.

Safety Precautions

FOR INDUSTRIAL USE ONLY. To be used by professionally trained personnel using proper safety equipment. Use only with adequate ventilation. Warning: this product is flammable, keep away from heat, sparks and open flame. Please refer to material safety data sheets.

Warranty

Guertin Coatings warrants its product to be free from defects in materials and workmanship and will REPLACE ANY PRODUCT PROVED TO BE DEFECTIVE, OR REFUND OF THE ORIGINAL PURCHASE PRICE OF THE QUANTITY PROVED TO BE DEFECTIVE. Requests for refund or replacement of product must be made in writing within one year from the original date of purchase. This Warranty does not apply to defects due, directly or indirectly, to misuse, abuse, negligent application, or acts of God.

GUERTIN COATINGS WILL NOT BE LIABLE FOR DEATH, INJURIES TO PERSONS OR PROPERTY, OR FOR INCIDENTAL, CONTINGENT, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OF OUR PRODUCT, INCLUDING DOWNTIME OR LOSS OF USE OF PRODUCT.

All data, statements, and recommendations made herein are based upon information we believe to be reliable, but are made without any representation, guarantee or warranty of accuracy. Our products are sold on the condition that the user himself will evaluate them, as well as our recommendations, to determine their suitability for his own purpose before adoption. Also, statements regarding the use of our products or processes are not to be construed as recommendations for their use in violation of any patent rights or in violation of any applicable laws or regulations.

SECTION IV - RISQUES D'INCENDIE OU D'EXPLOSION

POINT D'ECLAIR: -6 C (TAGLIABUE C. C.)
CLASS 3, DIV. 1

LEL: 1.0%
UEL: 13.8%

MOYENS D'EXTINCTION: CHIMIQUES SECS CO2 LA MOUSSE BROUILLARD DE L'EAU

RISQUE PARTICULIERE DE LUTTE CONTRE L'INCENDIE: LIQUIDE COMBUSTIBLE (POINT ECLAIR EST INFERIEUR A 100 F/38 C). PEUT FORMER DES MELANGES INFLAMMABLES. LES VAPEURS PEUVENT ETRE EXPLOSIVE DANS L'AIR. ELIMINER TOUTE SOURCE D'IGNITION. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE. GARDER LE RECIPIENT FERME.

PROCEDURE D'EXTINCTION: LES POMPIERS DOIVENT PORTER UN APPAREIL RESPIRATOIRE AUTONOME ET DES VETEMENTS DE PROTECTION COMPLETS. UTILISER DE L'EAU PULVERIZEE POUR REFROIDER LES STRUCTURES ET LES CONTENANTS EXPOSES AU FEU.

SECTION V - DANGERS POUR LA SANTE

EFFETS DE LA SUREXPOSITION: *** INHALATION: LES VAPEURS PEUVENT IRRITER. L'EXPOSITION A DES VAPEURS TRES CONCENTREES PEUVENT CAUSER DES MAUX DE TETES, DES ETOURDISSEMENTS, DES NAUSEES, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. L'EXPOSITION PROLONGEE A DES VAPEURS TRES CONCENTREES PEUT CAUSER L'EVANOUISSEMENT OU LA MORT. *** INGESTION: MODEREMENT TOXIQUE. LE PRODUIT EST NOCIF LORSQU'IL EST INGERE. L'INGESTION DE GRANDES QUANTITES PEUT CAUSER DES MAUX DE TETES, DES NAUSEES, DES VOMISSEMENTS, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. UNE PETITE QUANTITE DE CE LIQUIDE ASPIREE DANS LES POUMONS SOIT PAR INGESTION OU PAR VOMISSEMENT, RISQUE D'AVOIR DE GRAVE EFFETS NOCIF POUR LA SANTE (P.EX., PROVOQUER UN OEDEMENT PULMONAIRE). *** PEAU: PEUT CAUSER DE L'IRRITATION MODEREE. PEUT CAUSER LE DEGRAISSMENT ET LA DERMATITE. UNE EXPOSITION PROLONGEE PEUT RESULTER A UNE SENSIBILITE DANS LA PEAU. PEUT PROVOQUER DES BRULURES CHIMIQUES. PEUT ETRE ABSORVER PAR LA PEAU ET PROVOQUER UN RISQUE POUR LA SANTE. *** YEUX: LES VAPEURS PEUVENT IRRITER. LE LIQUIDE ET LES BRUINES IRRITENT LES YEUX ET PEUVENT CAUSER DES BRULURES. *** EFFETS DE LA SUREXPOSITION: CONTIENT SILICE. LA SUREXPOSTION A LONG TERME AU SILICE CAUSE LA SILICOSE ET LA DETERIATION CARDIOPULMONAIRE. LA SUREXPOSITION A LONG TERME AU NOIR DE CARBONE PEUT ENTRAINER DES LESIONS CUMULATIVES AU COEUR ET AUX POUMONS. L'EXPOSITION PROLONGEES OU REPETEES PEUT CAUSER UNE SENSIBILITE DE LA PEAU ET/OU UNE SENSIBILITE RESPIRATOIRE. L'EXPOSITION PROLONGEES OU REPETEES PEUT CAUSER UN MAUVAIS FONCTIONNEMENT DU FOIE, DES REINS, ET/OU DU SYSTEME NERVEUX. L'EXPOSITION PROLONGEES OU REPETEES PEUVENT CAUSER A LA LONGUE DES DOMMAGES AUX SYSTEME SANGUIN, GASTRO-INTESTINAL, NERVEUX, ET/OU REPRODUCTEUR. LES EXPOSITIONS PROLONGEES ET REPETEES PEUVENT PROVOQUER DES EFFETS TOXIQUE. L'EXPOSITION A CE PRODUIT NE DEVRAIT CAUSER AUCUN PROBLEME LORSQUE MANIFULER AVEC SOINS. LE CIRC A CLASSÉ L'ÉTHYLBENZENE PARMI LES SUBSTANCES DU GROUPE 2B EN SE FONDANT SUR DES DONNÉES SUFFISANTES DÉMONTRANT SA CANCÉROGÉNÉCITÉ POUR LES ANIMAUX DE LABORATOIRE, MAIS DE DONNÉES INSUFFISANTES SELON LES RÉSULTATS DE CERTAINES ÉTUDES MENÉES SUR DES ANIMAUX, DE TRES GRANDES EXPOSITIONS AUX XYLENES ON ENTRAINÉ DES EFFETS NÉFASTES SURE LE DÉVELOPPEMENT DES EMBRYONS/FOTUS. CES EFFETS SONT SOUVENT APPARUS A DES NIVEAUX D'EXPOSITION TOXIQUES POUR LA MERE. LA PORTÉE DE CES RÉSULTATS POUR LES HUMAINS N'A PAS ÉTÉ ÉTABLIE. LES EXPOSITIONS EXCESSIVES LONG TERME PEUT CAUSER TALCOSE, FIBROSE PULMONAIRE, QUI A SON TOUR MON ENTRAINER DES DOMMAGES GRAVES ET PERMANENTS AUX POUMONS. UNE ÉTUDE PORTANT SUR L'INHALATION DURANT TOUTE UNE VIE FAIT RESSORTIR QU'UNE EXPOSITION A DE LA POUSSIERE DE DIOXYDE DE TITANE A UNE CONCENTRATION DE 250 MG/M3 A ENTRAINÉ L'APPARITION DE TUMEURS AUX POUMONS CHEZ DES RATS. CES TUMEURS NE SONT APPARUES QU'A DES CONCENTRATIONS DE POUSSIERES QUI DÉPASSENT LA CAPACITÉ DES MÉCANISMES DE CLAIRANCE PULMONAIRE DES ANIMAUX ET SONT DIFFÉRENTES DES TUMEURS PULMONAIRES COMMUNES CHEZ L'ETRE HUMAIN TANT DANS LE TYPE QUE DANS

CONDITIONS MEDICALES GENERALEMENT AGGRAVEES PAR L'EXPOSITION: LES PROBLEMES CUTANES. LES PROBLEMES OCCULAIRES. LES PROBLEMES RESPIRATOIRE CHRONIQUES. EN 1995 CIRC A CONCLUDE EXISTE DES PREUVES SUFFISANTES CHEZ LES ANIMAUX EXPERIMENTAUX DE LA CANCEROGENICITE DU NOIR DE CARBONE CLASSEMENT BLACK PROBABLEMENT CANCEROGENE AUX HUMAINS.

VOIES PRIMAIRES DE PENETRATION: CONTACT DERMIQUE INHALATION INGESTION

MESURES DE PREMIERS SOINS: *** INHALATION: TRANSPORTER A L'AIR FRAIS. AIDER LA RESPIRATION SI NECESSAIRE. GARDER LA VICTIME AU CHAUD ET CALME. CONSULTER UN MEDECIN. *** INGESTION: NE PAS FAIRE VOMIR OU BOIRE. FAIRE REPOSER. CONSULTER SANS DELAI UN MEDECIN. SI LE VOMISSEMENT SE PRODUIT, GARDER LA TETE DE LA VICTIME BAISSEE AU-DESSOUS DE SES HANCHES POUR EVITER L'ASPIRATION DANS LES POUMONS. *** PEAU: LAVER LA PEAU CONTAMINEE AVEC DE L'EAU. CONSULTER SANS DELAI UN MEDECIN. *** YEUX: RINCER DE L'EAU CLAIRE PENDANT AU MOINS 15 MINUTES ET FAIRE IMMEDIATEMENT APPEL A UN MEDECIN.

SECTION VI - DONNEES SUR LA REACTIVITE

STABILITE: CE PRODUIT EST STABLE DANS DES CONDITIONS NORMALES D'ENTREPOSAGE.

POLYMERISATION DANGERUSE: NE SE PRODUIRA PAS DANS DES CONDITIONS NORMALES.

PRODUITS DE DECOMPOSITION DANGEREUX: OXYDES DE CARBONE. VAPEURS TOXIQUES ET FUMEE. FUMEE INFLAMMABLES.

CONDITIONS A EVITER: CHALEUR, ETINCELLES, FLAMMES.

PRODUITS INCOMPATIBLES: AGENTS OXIDABLE. ACIDES. ALCALINS. AMINES. AGENTS REDUCTEURS. AGENTS D'AZOTES. LES SULFURES. HALOGENES. L'EAU. LES COMPOSES CHLORINES.

SENSIBILITE AUX DECHARGES ELECTROSTATIQUES: PRENDRE DES PRECAUTIONS CONTRE LES DECHARGES STATIQUES.

SECTION VII - MESURES POUR FUITE OU DEVERSEMENT

ACTION A PRENDRE EN CAS DE FUITE OU DE DEVERSEMENT: ELIMINER TOUTE SOURCE D'IGNITION. ARRETER LA SOURCE DE FUITE. ASSURER UN VENTILATION EVACUER TOUT PERSONNEL NON-ESSENTIEL. PORTER LES VETEMENTS NECESSAIRE. ENDIGER L'ENDROIT POUR EMPECHER PROPAGATION. ABSORBER LE LIQUIDE AVEC UN PRODUIT ABSORBANT INERTE. TRANSFERER DANS UN CONTENANT A L'EPREUVE D'IGNITION.

METHODES D'ELIMINATION: NE PAS CONTAMINER LES COURS D'EAU POTABLE, LES LACS, LES ETANGS OU LES RUISSEAUX. SELON REGLEMENTS MUNICIPAUX, LES LOIS PROVINCIAL ET FEDERALES APPLICABLE A VOTRE LOCALITE.

SECTION VIII - PRECAUTIONS D'EMPLOI

PROTECTION RESPIRATOIRE: UTILISER UN MASQUE RESPIRATOIRE A HAUT RENDEMENT QUI PROTEGE CONTRE LES VAPEURS ORGANIQUES ET LES POUSSIERES TOXIQUES. POUR DES HAUTES CONCENTRATIONS, UTILISER UN MASQUE RESPIRATOIRE A ALIMENTATION D'

VENTILATION: VENTILATION EFFICACE SUR PLACE POUR EVACUER LA POUSSIERE. EMPLOYER UN APPAREILAGE DE VENTILATION ANTIDEFLATION.

GANTS PROTECTEURS: PORTER DES GANTS/VETEMENTS RESISTANTS AUX PRODUITS CHIMIQUES AFIN DE PROTEGER LA PEAU POTENTIELLEMENT EXPOSEE.

PROTECTION YEUX: EVITER LE CONTACT AVEC LES YEUX. PORTER DES LUNETTES PROTECTRICES CONTRE LES PRODUITS CHIMIQUES ET UN ECRAN FACIAL.

AUTRE EQUIPMENT PROTECTEUR: TABLIER ET BOTTES IMPERMEABLES. DOUCHE OCULAIRE ET DOUCHE D'URGENCE.

AUTRE MESURES DE PROTECTION: EVITER TOUT CONTACT AVEC LES YEUX, LA PEAU ET LES VETEMENTS. EVITER DE RESPIRER. NE PAS INGERER. CONSERVER LOIN DE TOUS ALIMENTS. BIEN LAVER LES MAINS APRES AVOIR MANIPULER LA MATIERE. CHANGER ET LAVER LES VETEMENTS CONTAMINES.

RENSEIGNEMENTS SPECAUX EN MATIERE D'EXPEDITION: PEINTURE. LIQUIDE INFLAMMABLE CLASSE:3 UN# 1263 LE GROUPE D'EMBALLAGE II. CANUTEC 24 HOUR EMERGENCY NUMBER: (613) 996-6666

SECTION IX - PRECAUTIONS SPECIALES

PRECAUTIONS A PRENDRE A LA MANIPULATION ET L'ENTREPOSAGE: ENTREPOSER DANS UN ENDROIT FRAIS, SEC ET BIEN VENTILE, A L'ECART DES MATIERES INCOMPATIBLES. NE PAS LAISSER A PROXIMITE D'UNE SOURCE DE CHALEUR, D'ETINCELLES, OU D'UNE FLAMME. GARDER LE RECIPIENT FERME. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE.

AUTRES PRECAUTIONS: NE PAS COUPER, BROYER, SOUDER OU PERCER SUR OU PRES DE CE CONTENANT.

SECTION X - HMIS INFORMATION

HMIS RATIO: SANTE: 2 FLAMMABILITE: 3 REACTIVITE: 1 PROTECTION PERSONNELLE: K

Cloverdale INDUSTRIAL • INDUSTRIEL

TECHNICAL DATA
EF25000 SUPER-SHIELD® SERIES
3:1 & 4:1 Mix Ratio

Description

The EF25000 Series is a high performance, isocyanate free urethane system that is VOC compliant at ≤2.8 - 3.5 lbs / gal (≤335 - 420 grams/litre). Each of Cloverdale's Super-Shield® coatings are custom formulated to customer specifications; application and cure properties vary to optimize performance.

Mixed Coating Properties

Mix Ratio	3 Parts base to 1 Part catalyst (faster cure, lower spray viscosity, excellent flow out) 4 Parts base to 1 Part catalyst (STD cure, higher sag resistance, longer open time)
VOC	≤2.8 - 3.5 lbs / gal or ≤335 - 420 grams / litre
Volume Solids	50 - 65%
Sag	
Airless	4 – 5 mils
Air Assist Airless	4 – 5 mils
Air Spray	4 – 5 mils
HVLP	4 – 5 mils
Viscosity @ 70℉ (21℃)	30 ± 3 Seconds Zahn#2 (3:1 Mixing) 35 ± 3 Seconds Zahn#2 (4:1 Mixing)
Pot Life @ 77℉ (25℃)	2.00 hours
Gloss	
20°	Matte to ultra gloss (to customer specifications)
60°	Matte to ultra gloss (to customer specifications)
Impacts	160+ in/lbs @ 2 mils DFT
Pencil Hardness	HB – F
Theoretical Coverage @ 1 mil DFT	802 - 1042 ft^2 / gal (19.7 – 25.6 m^2 / litre)

DFT = Dry Film Thickness

Product Weight - *Container weight not included*

EF25000 base	8.76 – 11.26 lbs / gallon or 1.050 – 1.350 kg / litre
SI25002P2 catalyst	6.75 lbs / gallon or 0.810 kg / litre

Shelf Life

Shelf Life is applicable only for material stored in unopened and undamaged original factory filled containers at 39°- 100℉ (4°to 38℃).

EF25000 series base 2 years SI25002P2 6 months

Subject to reinspection. Store unused material in tightly closed containers. Contents of partially filled containers may show surface skinning after storage. If skinning forms, remove by straining before use.

BENEFITS

- ISO Free
- outstanding appearance
- excellent DOI
- excellent color & gloss retention
- low VOC
- ultra low HAP's
- meets Canadian auto refinish single stage VOC requirement
- 4:1 meets AIM VOC spec for 'other industrial maintenance coatings'

USES

- fleet finishing applications
- oil field application
- ACE
- electrical transformers
- recreational vehicles
- plastics

TECHNICAL DATA
EF25000 Series

Surface Preparation
Properly prepared, primed surface following all application procedures and recoat instructions on primer technical data sheet.

Mixing Instructions
Mixing at 3:1 by volume:

3 Parts SI25000 series base to
1 Part SI25002P2 activator

Mixing at 4:1 by volume:

4 Parts SI25000 series base to
1 Part SI25002P2 activator

Mix thoroughly to uniform consistency before use. Filter through 100 mesh in line filter.

Application Instructions
Application Temperature

Minimum	55℉ (10℃)
Maximum	100℉ (38℃)

Equipment Settings

Air Spray:	pot pressure:	10 – 20 psi
	atomizing air:	45 – 65 psi
	nozzle set:	1.0 – 1.8
Airless Spray:	fluid pressure:	2000 - 2500 psi
	tip size:	.011 - .015
Air Assist Airless:	fluid pressure:	700 - 1500 psi
	atomizing air:	20 – 60 psi
	tip size:	.011 - .015

- Precision plural component equipment is recommended. All spray equipment including lines and filters must be kept clean at all times to avoid nozzle plugging. When hand mixing smaller quantities, stir thoroughly to a uniform consistency prior to use.
- Apply in wet coat making even parallel passes. Overlap each pass 50% to minimize holidays, bare areas and pinholes.
- Excess wet film will cause sags and runs.

Recommended dry film thickness is 2 – 3 mils.

Supershield® is only recommended to be a finish coat over two component epoxy primers. Never apply over one component or urethane primers.

If thinners are required: *Please contact your Cloverdale Representative for recommendations.*

Note: Successful application requires following the recommended temperature, humidity conditions and film thickness ranges.

Drying Schedule
To customer specifications

Recoat Window for Best DOI

Substrate Temp	70℉ (21℃)
Over Itself	15 minutes to 1 day
Over Epoxy Primers	1 hour to 3 days

Flash times: Please refer to specific Cloverdale Primer Technical Data Sheet for appropriate flash times and recoat windows for this topcoat.

It is recommended to apply at ambient air and surface temperatures between 55°- 100℉ (10°- 38℃). App ly at a relative humidity level between 33% - 85%.

Surface temperature must be at least 5℉ (3℃) abov e the dew point to ensure that moisture condensation does not occur during application and the drying period.

Higher/lower temperatures & humidity, film thickness, improper activator range and poor air movement will affect the dry time and recoat window.

Equipment Cleanup
Clean application equipment with Cloverdale's SP03078T0.

Safety Precautions
FOR INDUSTRIAL USE ONLY. To be used by professionally trained personnel using proper safety equipment. Use only with adequate ventilation. Warning: this product is flammable, keep away from heat, sparks and open flame. Please refer to material safety data sheets.

Warranty
Cloverdale Paint Inc. warrants its product to be free from defects in materials and workmanship and will REPLACE ANY PRODUCT PROVED TO BE DEFECTIVE, OR REFUND OF THE ORIGINAL PURCHASE PRICE OF THE QUANTITY PROVED TO BE DEFECTIVE. Requests for refund or replacement of product must be made in writing within one year from the original date of purchase. This Warranty does not apply to defects due, directly or indirectly, to misuse, abuse, negligent application, or acts of God.

CLOVERDALE PAINT INC. WILL NOT BE LIABLE FOR DEATH, INJURIES TO PERSONS OR PROPERTY, OR FOR INCIDENTAL, CONTINGENT, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OF OUR PRODUCT, INCLUDING DOWNTIME OR LOSS OF USE OF PRODUCT.

All data, statements, and recommendations made herein are based upon information we believe to be reliable, but are made without any representation, guarantee or warranty of accuracy. Our products are sold on the condition that the user himself will evaluate them, as well as our recommendations, to determine their suitability for his own purpose before adoption. Also, statements regarding the use of our products or processes are not to be construed as recommendations for their use in violation of any patent rights or in violation of any applicable laws or regulations.

SECTION IV - RISQUES D'INCENDIE OU D'EXPLOSION

POINT D'ECLAIR: 15 C
(TAGLIABUE C. C.)
CLASS 3, DIV. 2

LEL: 1.0%
UEL: 12.1%

MOYENS D'EXTINCTION: CO2 CHIMIQUES SECS LA MOUSSE

RISQUE PARTICULIER DE LUTTE CONTRE L'INCENDIE: LIQUIDE COMBUSTIBLE (POINT ECLAIR EST INFERIEUR A 100 F/38 C). PEUT FORMER DES MELANGES INFLAMMABLES. LES VAPEURS PEUVENT ETRE EXPLOSIVE DANS L'AIR. ELIMINER TOUTE SOURCE D'IGNITION. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE. GARDER LE RECIPIENT FERME.

PROCEDURE D'EXTINCTION: LES POMPIERS DOIVENT PORTER UN APPAREIL RESPIRATOIRE AUTONOME ET DES VETEMENTS DE PROTECTION COMPLETS. UTILISER DE L'EAU PULVERIZEE POUR REFROIDIR LES STRUCTURES ET LES CONTENANTS EXPOSES AU FEU.

SECTION V - DANGERS POUR LA SANTE

EFFETS DE LA SUREXPOSITION: *** INHALATION: LES VAPEURS PEUVENT IRRITER. L'EXPOSITION A DES VAPEURS TRES CONCENTREES PEUVENT CAUSER DES MAUX DE TETES, DES ETOURDISSEMENTS, DES NAUSEES, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. L'EXPOSITION PROLONGEE A DES VAPEURS TRES CONCENTREES PEUT CAUSER L'EVANOUISSEMENT OU LA MORT. *** INGESTION: MODEREMENT TOXIQUE. LE PRODUIT EST NOCIF LORSQU'IL EST INGERE. L'INGESTION DE GRANDES QUANTITES PEUT CAUSER DES MAUX DE TETES, DES NAUSEES, DES VOMISSEMENTS, UNE DEPRESSION DU SYSTEME NERVEUX CENTRAL. UNE PETITE QUANTITE DE CE LIQUIDE ASPIREE DANS LES POUMONS SOIT PAR INGESTION OU PAR VOMISSEMENT, RISQUE D'AVOIR DE GRAVE EFFETS NOCIF POUR LA SANTE (P.EX., PROVOQUER UN OEDEM PULMONAIRE). *** PEAU: PEUT CAUSER DE L'IRRITATION MODEREE. PEUT CAUSER LE DEGRAISSMENT ET LA DERMATITE. UNE EXPOSITION PROLONGEE PEUT RESULTER A UNE SENSIBILITE DANS LA PEAU. PEUT PROVOQUER DES BRULURES CHIMIQUES. PEUT ETRE ABSORBER PAR LA PEAU ET PROVOQUER UN RISQUE POUR LA SANTE. *** YEUX: LES VAPEURS PEUVENT IRRITER. LE LIQUIDE ET LES BRUINES IRRITENT LES YEUX ET PEUVENT CAUSER DES BRULURES. *** EFFETS DE LA SUREXPOSITION: L'EXPOSITION PROLONGEES OU REPETEES PEUT CAUSER UNE SENSIBILITE DE LA PEAU ET/OU UNE SENSIBILITE RESPIRATOIRE. L'EXPOSITION PROLONGEES OU REPETEES PEUVENT CAUSER A LA LONGUE DES DOMMAGES AUX SYSTEME SANGUIN, GASTRO-INTESTINAL, NERVEUX, ET/OU REPRODUCTEUR. LE CIRC A CLASSE L'ETHYLBENZENE PARMI LES SUBSTANCES DU GROUPE 2B EN SE FONDANT SUR DES DONNEES SUFFISANTES DEMONTRANT SA CANCEROGENECITE POUR LES ANIMAUX DE LABORATOIRE, MAIS DE DONNEES INSUFFISANTES DEMONTRANT L'APPARITION DE CANCER CHEZ LES HUMAINS. SELON LES RESULTATS DE CERTAINES ETUDES MENEES SUR DES ANIMAUX, DE TRES GRANDES EXPOSITIONS AUX XYLENES ON ENTRAINE DES EFFETS NEFASTES SUR LE DEVELOPPEMENT DES EMBRYONS/FETUS. CES EFFETS SONT SOUVENT APPARUS A DES NIVEAUX D'EXPOSITION TOXIQUES POUR LA MERE. LA PORTEE DE CES RESULTATS POUR LES HUMAINS N'A PAS ETE ETABLIE.

CONDITIONS MEDICALES GENERALEMENT AGGRAVEES PAR L'EXPOSITION: LES PROBLEMES CUTANES. LES PROBLEMES RESPIRATOIRE CHRONIQUES.

VOIES PRIMAIRES DE PENETRATION: INHALATION CONTACT DERMIQUE

MESURES DE PREMIERS SOINS: *** INHALATION: TRANSPORTER A L'AIR FRAIS. AIDER LA RESPIRATION SI NECESSAIRE. GARDER LA VICTIME AU CHAUD ET CALME. CONSULTER UN MEDECIN. *** INGESTION: NE PAS FAIRE VOMIR OU BOIRE. FAIRE REPOSER. CONSULTER SANS DELAI UN MEDECIN. SI LE VOMISSEMENT SE PRODUIT, GARDER LA TETE DE LA VICTIME BAISSEE AU-DESSOUS DE SES HANCHES POUR EVITER L'ASPIRATION DANS LES POUMONS. *** PEAU: LAVER LA PEAU CONTAMINEE AVEC DE L'EAU. CONSULTER SANS DELAI UN MEDECIN. *** YEUX: RINCER DE L'EAU CLAIRE PENDANT AU MOINS 15 MINUTES ET FAIRE IMMEDIATEMENT APPEL A UN MEDECIN.

SECTION VI - DONNEES SUR LA REACTIVITE

STABILITE: CE PRODUIT EST STABLE DANS DES CONDITIONS NORMALES D'ENTREPOSAGE.

POLYMERISATION DANGERUSE: NE SE PRODUIRA PAS DANS DES CONDITIONS NORMALES.

PRODUITS DE DECOMPOSITION DANGEREUX: OXYDES DE CARBONE. OXYDES D'AZOTE. VAPEURS TOXIQUES ET FUMEE.

CONDITIONS A EVITER: CHALEUR, ETINCELLES, FLAMMES.

PRODUITS INCOMPATIBLES: AGENTS OXIDABLE. ACIDES. ALCALINS. AGENTS REDUCTEURS. LES SULFURES. LES METAUX ACTIFS, IONS DE METAUX. LE CUIVRE. HALOGENES. L'EAU.

SENSIBILITE AUX DECHARGES ELECTROSTATIQUES: PRENDRE DES PRECAUTIONS CONTRE LES DECHARGES STATIQUES.

SECTION VII - MESURES POUR FUITE OU DEVERSEMENT

ACTION A PRENDRE EN CAS DE FUITE OU DE DEVERSEMENT: ELIMINER TOUTE SOURCE D'IGNITION. ARRETER LA SOURCE DE FUITE. EVACUER TOUT PERSONNEL NON-ESSENTIEL. PORTER LES VETEMENTS NECESSAIRE. ENDIGER L'ENDROIT POUR EMPECHER PROPAGATION. ABSORBER LE LIQUIDE AVEC UN PRODUIT ABSORBANT INERTE. TRANSFERER DANS UN CONTENANT A L'EPREUVE D'IGNITION.

METHODES D'ELIMINATION: NE PAS CONTAMINER LES COURS D'EAU POTABLE, LES LACS, LES ETANGS OU LES RUISSEAUX. SELON REGLEMENTS MUNICIPAUX, LES LOIS PROVINCIAL ET FEDERALES APPLICABLE A VOTRE LOCALITE.

SECTION VIII - PRECAUTIONS D'EMPLOI

PROTECTION RESPIRATOIRE: UTILISER UN MASQUE RESPIRATOIRE A HAUT RENDEMENT QUI PROTEGE CONTRE LES VAPEURS ORGANIQUES ET LES POUSSIERES TOXIQUES. POUR DES HAUTES CONCENTRATIONS, UTILISER UN MASQUE RESPIRATOIRE A ALIMENTATION D'AIR.

VENTILATION: VENTILATION EFFICACE SUR PLACE POUR EVACUER LA POUSSIERE. EMPLOYER UN APPAREILAGE DE VENTILATION ANTIDEFLATION.

GANTS PROTECTEURS: PORTER DES GANTS/VETEMENTS RESISTANTS AUX PRODUITS CHIMIQUES AFIN DE PROTEGER LA PEAU POTENTIELLEMENT EXPOSEE.

PROTECTION YEUX: EVITER LE CONTACT AVEC LES YEUX. PORTER DES LUNETTES PROTECTRICES CONTRE LES PRODUITS CHIMIQUES ET UN ECRAN FACIAL.

AUTRE EQUIPMENT PROTECTEUR: TABLIER ET BOTTES IMPERMEABLES. DOUCHE OCULAIRE ET DOUCHE D'URGENCE.

AUTRE MESURES DE PROTECTION: EVITER TOUT CONTACT AVEC LES YEUX, LA PEAU ET LES VETEMENTS. EVITER DE RESPIRER. NE PAS INGERER. CONSERVER LOIN DE TOUS ALIMENTS. BIEN LAVER LES MAINS APRES AVOIR MANIPULER LA MATIERE. CHANGER ET LAVER LES VETEMENTS CONTAMINES.

RENSEIGNEMENTS SPECAUX EN MATIERE D'EXPEDITION: PEINTURE. LIQUIDE INFLAMMABLE CLASSE:3 UN# 1263 LE GROUPE D'EMBALLAGE II. CANUTEC 24 HOUR EMERGENCY NUMBER: (613) 996-6666

SECTION IX - PRECAUTIONS SPECIALES

PRECAUTIONS A PRENDRE A LA MANIPULATION ET L'ENTREPOSAGE: ENTREPOSER DANS UN ENDROIT FRAIS, SEC ET BIEN VENTILE, A L'ECART DES MATIERES INCOMPATIBLES. NE PAS LAISSER A PROXIMITE D'UNE SOURCE DE CHALEUR, D'ETINCELLES, OU D'UNE FLAMME. GARDER LE RECIPIENT FERME. TOUT EQUIPMENT DOIT ETRE MIS A LA TERRE.

AUTRES PRECAUTIONS: NE PAS UTILISER DE PRESSION POUR VIDER LE CONTENANT. NE PAS COUPER, BROYER, SOUDER OU PERCER SUR OU PRES DE CE CONTENANT. TOUS LES CONTENANTS CONTIENNENTDES RESIDUS ET DES VAPEURS. MANIPULER LES CONTENANTS VIDES COMME S'ILS ETAIENT PLEINS.

SECTION X - HMIS INFORMATION

83030
DATA SHEET

2.1 VOC ARP Primer

Automotive Primer

Industry Approvals		
Auto Refinish:	✓	Category 1
Env. Canada:		Exempt
MPI:		N/a
AWWA:		N/a

General Properties

A high performance epoxy primer for vehicle refinish applications requiring a primer with less than 250 gr/lt VOC. The 83030 primer has superior corrosion resistance when applied to prepared steel. No induction time required. 83030 has excellent sanding capability, but provides a finish so smooth that sanding is often not required.

Recommended Uses

For use in vehicle refinish applications, truck boxes & bodies, power distribution equipment, tanks, agricultural equipment, and general industrial priming.

Product Information

GENERIC TYPE
Amine Cured Epoxy

PIGMENT TYPE
Anti-corrosive

COLOR
Grey

BASES
N/a

FINISH
Flat

AVERAGE VOLUME SOLIDS
60.2%

AVERAGE WEIGHT SOLIDS
77.0%

RECOMMENDED FILM THICKNESS
Wet: 3.3-5.0 mils (82 - 125 microns)
Dry: 2-3 mils (50 - 75 microns)
See your Cloverdale Representative for project recommendations.

THEORETICAL COVERAGE
965 ft^2/gal @1 mil (25 microns) DFT
23.7 m^2/L @ 1 mil (25 microns) DFT
Actual coverage may vary depending on substrate and application methods.

MIXED RATIO
3 Parts 83030A; 1 Part 83030B

INDUCTION TIME
No induction time required

POT LIFE
7 hours at 25°C (77°F) (less at higher temperatures)

VISCOSITY MIXED
57 - 63 KU

TEMPERATURE RESISTANCE (DRY)
93°C (200°F) Continuous
120°C (250°F) Intermittent

V.O.C. MIXED
250 gm./lit. (2.1 lb./gal.)
**refer to MSD sheet for current VOC values*

THINNER
Use as supplied.

ACCELERATOR
A-65

Methods of Application

AIRLESS SPRAY	1500 - 200 psi with tip sizes .011" - .013" or equivalent
H.V.L.P.	Tip size 1.4 - 1.6 mm. 8 - 10 psi cap pressure
CONVENTIONAL	40 - 50 psi gun pressure
BRUSH / ROLLER	Not recommended

Drying Time - Temperature, Relative Humidity, and Film Thickness will affect dry and re-coat times.

Substrate Temperature	Touch Dry	Hard Dry	Overcoat Interval with Armourshield		
			Minimum	Maximum	Normal
25°C (77°F)	3.5 hours	6 hours	2 hours	3 days	4 hours

Distribution E.S.
104-A, 5e Ave Est
La Sarre (Qc) J9Z 2Y1
T.819.339.2101
admin@distributiones.com

83030

Recommended Topcoats

Most Cloverdale Conventional and High Performance Coatings. Note: Only the 837 and 839 series urethanes should be used for ARP applications.

Surface Preparation

Area to be painted should be thoroughly cleaned with a detergent solution in water followed by a wash using a wax and grease remover. Sand the bare metal areas using 80-180 grit abrasive. Old, existing finishes should be sanded using 320 – 400 grit paper. Sanded areas should be re-cleaned and primed as quickly as possible after drying.

Limitations

Not recommended for immersion service. For best results apply when substrate temperature is above 10°C (50°F), and at a minimum of 3°C (5°F) above the dew point. Do not apply when the relative humidity is above 85%.

Mixing Instructions

Mix 83030 base A component and curing agent 83030 activator B separately with good agitation. Add curing agent to base component and mix thoroughly until homogenous. If thinning is necessary or required proceed only after recommended induction time has passed.

Safety Precautions

This product is for industrial use only. **Refer to Material Safety Data Sheet for proper health and safety information.**

Storage and Handling

FLASH POINT	-20°C (-4°F) TCC
PRODUCT WEIGHT	1.435 kg/lt mixed (container extra)
STORAGE	Cool, dry, secure location. See your Cloverdale Paint Representative.
PACKAGE SIZE	1 gal kit - 3 qts 83030A and 1 qt. 83030B 4 gal kit - 3 gal 83030A and 1 gal 83030B

Some package sizes or colors may be by special order only. Please check with your Cloverdale Representative when ordering.

Warranty Disclaimer

Cloverdale Paint manufactures quality products. In the event that this product is defective or in any way unsuitable for the application for which it is sold, Cloverdale Paint Inc. will replace the product free of charge. The warranty provided by this data sheet is the only warranty or guarantee of quality made in respect of this product by Cloverdale Paint Inc. By purchasing this product the customer accepts this warranty in lieu of all others, and waives all claims to any other remedy arising from any warranty or guarantee of quality, whether such warranty or guarantee of quality was made expressly to the customer or implied by any applicable law.

83030

PERFORMANCE CRITERIA

1. Abrasion Resistance

Method: ASTM D4060 Abrasion Resistance of Organic Coating by Taber Abrader, 1000 gram load, CS-17 Wheel, 1000 Cycles

Coating System: 1 coat 83030

Results: 161 mg.

2. Adhesion

Method: ASTM D4541, method "E"

Coating System: 83030 primer, 839 Armourshield topcoat

Results: >900 psi

3. Chemical Resistance

Method: Covered spot test for 1 week at room temperature

Coating System: 1 coat 83030

Coating was exposed to - 5% Sodium Hydroxide Solution; 5% Sulfuric Acid Solution; 5% Hydrochloric Acid; 5% Mono Basic Sodium Phosphate Solution; 5% Sodium Hypochlorite Solution; Heavy Duty Liquid Detergent

Results: Unaffected **-** slight discoloration permitted

4. Recoating Window

Method: Internal method - Minimum = the time to >80% gloss @ 20 degree angle. Maximum = longest time tested with 5B adhesion of topcoat

Coating System: 83030 primer, 839 Armourshield topcoat

Results: 2 hrs to >72 hrs

5. Salt Spray (Fog)

Method: ASTM B117

Coating System A: 1 coat 83030

Results:>1000 hrs

Coating System B: 1 coat 83030, 1 coat 83904

Results: >1500 hrs

6. Flexibility

Method: ASTM D522 Cylindrical Mandrel Bend

Coating System: 1 coat 83030

Results: Not less than 9% elongation

7. Pencil Hardness

Method: ASTM D3363

Coating System A: 1 coat 83030

Results: pass 2H

admin@distributiones.com

SECTION IV - FIRE AND EXPLOSION DATA

FLASH POINT: -18 C
(TAGLIABUE C. C.)
CLASS 3, DIVISION 1

LEL: 1.0%
UEL: 16.3%

EXTINGUISHING MEDIA: DRY CHEMICAL CARBON DIOXIDE FOAM WATER FOG

UNUSUAL FIRE AND EXPLOSION HAZARDS: FLAMMABLE LIQUID (FLASH POINT LESS THAN 100 F/38 C). MAY FORM FLAMMABLE MIXTURES. VAPORS MAY BE EXPLOSIVE IN AIR. ELIMINATE IGNITION SOURCES. GROUND ALL EQUIPMENT. KEEP CONTAINER CLOSED.

SPECIAL FIREFIGHTING PROCEDURES: FIREFIGHTERS SHOULD WEAR SELF CONTAINED BREATHING APPARATUS AND FULL PROTECTIVE CLOTHING. USE WATER SPRAY TO COOL NEARBY CONTAINERS AND STRUCTURES EXPOSED TO FIRE.

SECTION V - HEALTH HAZARD DATA

EFFECTS OF OVER EXPOSURE: *** INHALATION: VAPORS MAY BE IRRITATING. EXPOSURE TO HIGH VAPOR CONCENTRATIONS MAY CAUSE HEADACHES, DIZZINESS, NAUSEA, AND CENTRAL NERVOUS SYSTEM DEPRESSION. PROLONGED EXPOSURE TO HIGH VAPOR CONCENTRATIONS MAY CAUSE UNCONSCIOUSNESS OR DEATH. *** INGESTION: MODERATELY TOXIC. HARMFUL IF SWALLOWED. SWALLOWING LARGE QUANTITIES CAUSES HEADACHES, NAUSEA, VOMITING, AND CENTRAL NERVOUS SYSTEM DEPRESSION. MAY CAUSE LIVER AND/OR KIDNEY DAMAGE. SMALL AMOUNTS OF LIQUID DRAWN INTO THE LUNGS FROM SWALLOWING OR VOMITING MAY CAUSE SEVERE HEALTH AFFECTS (E.G.PULMONARY EDEMA). *** SKIN: CAN CAUSE MODERATE IRRITATION. CAN CAUSE DEFATTING AND DERMATITIS. PROLONGED EXPOSURE MAY CAUSE SKIN SENSITIZATION. CAN CAUSE CHEMICAL BURNS. CAN BE ABSORBED THROUGH THE SKIN CAUSING A HEALTH HAZARD. *** EYES: VAPORS MAY IRRITATE. LIQUID AND MISTS WILL IRRITATE AND MAY BURN THE EYES. *** CHRONIC AFFECTS OF OVEREXPOSURE: CONTAINS SILICA. LONG TERM EXPOSURE TO SILICA DUST MAY CAUSE SILICOSIS AND CARDIOPULMONARY IMPAIRMENT. REPEATED OR PROLONGED EXPOSURES MAY CAUSE SKIN AND/OR RESPIRATORY SENSITIZATION. REPEATED OR PROLONGED EXPOSURES MAY CAUSE LIVER, KIDNEY, AND/OR NEURAL DYSFUNCTION. REPEATED OR PROLONGED EXPOSURES MAY CAUSE DELAYED EFFECTS INVOLVING BLOOD, GASTRO-INTESTINAL, NERVOUS AND/OR REPRODUCTIVE SYSTEMS. LONG TERM EXPOSURE TO DUSTS CAN LEAD TO RESPIRATORY IMPAIRMENT. HIGH EXPOSURES TO XYLENES IN SOME ANIMAL STUDIES HAVE BEEN REPORTED TO CAUSE HEALTH EFFECTS ON THE DEVELOPING EMBRYO/FETUS. THESE EFFECTS WERE OFTEN AT LEVELS TOXIC TO THE MOTHER. THE SIGNIFICANCE OF THESE FINDINGS TO HUMANS HAS NOT BEEN DETERMINED. LONG-TERM EXCESSIVE EXPOSURES MAY CAUSE TALCOSIS, PULMONARY FIBROSIS, WHICH IN TURN MAY LEAD TO SEVERE AND PERMANENT DAMAGE TO THE LUNGS. IN A LIFETIME INHALATION STUDY, EXPOSURE TO 250 MG/M3 TITANIUM DIOXIDE DUST RESULTED IN THE DEVELOPMENT OF LUNG TUMOURS IN RATS. THESE TUMOURS OCCURRED ONLY AT DUST LEVELS THAT OVERWHELMED THE ANIMALS' LUNG CLEARANCE MECHANISMS AND WERE DIFFERENT FROM COMMON HUMAN LUNG TUMOURS IN BOTH TYPE AND LOCATION. THE RELEVANCE OF THESE FINDINGS TO HUMANS IS UNKNOWN. THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER (IARC) HAS CLASSIFIED TITANTIUM DIOXIDE AS POSSIBLY CARCINOGENIC TO HUMANS (GROUP 2B) BASED ON INADEQUATE EVIDENCE OF CARCINOGENICITY IN HUMANS AND SUFFICIENT EVIDENCE OF CARCINOGENICITY IN EXPERIMENTAL ANIMALS. ACCORDING TO THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER (IARC), METHYL ISOBUTYL KETONE IS POSSIBLY CARCINOGENIC TO HUMANS (GROUP 2B)

MEDICAL CONDITIONS PRONE TO AGGRAVATION BY EXPOSURE: SKIN DISORDERS. EYE DISORDERS. CHRONIC RESPIRATORY DISORDERS.

PRIMARY ROUTE(S) OF ENTRY: DERMAL INHALATION INGESTION

EMERGENCY AND FIRST AID PROCEDURES: *** INHALATION: REMOVE TO FRESH AIR. ASSIST

SECTION V - HEALTH HAZARD DATA

BREATHING IF NECESSARY. KEEP VICTIM WARM AND QUIET. SEEK MEDICAL ATTENTION. *** INGESTION: DO NOT INDUCE VOMITING OR GIVE FLUIDS. KEEP AT REST. GET PROMPT MEDICAL ATTENTION. IF VOMITING OCCURS, KEEP VICTIM'S HEAD BELOW HIPS TO PREVENT ASPIRATION INTO THE LUNGS. *** SKIN: FLUSH CONTAMINATED SKIN WITH WATER. GET PROMPT MEDICAL ATTENTION. *** EYES: FLUSH WITH CLEAN WATER FOR AT LEAST 15 MINUTES AND IMMEDIATELY GET MEDICAL ATTENTION.

SECTION VI - REACTIVITY DATA

STABILITY: THIS PRODUCT IS STABLE UNDER NORMAL STORAGE CONDITIONS.

HAZARDOUS POLYMERIZATION: COULD OCCUR UNDER NORMAL CONDITIONS. CARE MUST BE EXERCISED.

HAZARDOUS DECOMPOSITION PRODUCTS: OXIDES OF CARBON. TOXIC FUMES AND SMOKE. FLAMMABLE FUMES.

CONDITIONS TO AVOID: HEAT, SPARKS OR FLAME.

INCOMPATABILITY: OXIDIZING AGENTS. ACIDS. ALKALIES. AMINES. SULFIDES. ALDEHYDES. HALOGENS. CHLORINATED COMPOUNDS.

SENSITIVITY TO STATIC DISCHARGE: TAKE PRECAUTIONARY MEASURES AGAINST STATIC DISCHARGES.

SECTION VII - SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: ELIMINATE IGNITION SOURCES. STOP SOURCE OF SPILL. VENTILATE AREA. EVACUATE ALL NON ESSENTIAL PERSONNEL. WEAR APPROPRIATE PROTECTIVE EQUIPMENT. DIKE SPILL TO KEEP FROM SPREADING. COVER WITH INERT ABSORBENT. REMOVE TO DISPOSAL CONTAINER.

WASTE DISPOSAL METHOD: DO NOT CONTAMINATE ANY LAKES, PONDS, STREAMS, OR UNDERGROUND WATER SUPPLIES. DISPOSE OF IN ACCORDANCE WITH LOCAL, PROVINCIAL AND FEDERAL REGULATIONS IN YOUR AREA.

SECTION VIII - SAFE HANDLING AND USE INFORMATION

RESPIRATORY PROTECTION: USE A COMBINATION ORGANIC VAPOR/TOXIC PARTICULATE HIGH EFFICIENCY FILTER RESPIRATOR. FOR HIGH CONCENTRATIONS, USE AIR SUPPLIED RESPIRATOR.

VENTILATION: EFFICIENT LOCAL EXHAUST VENTILATION IS REQUIRED. USE EXPLOSION PROOF VENTILATION EQUIPMENT.

PROTECTIVE GLOVES: WEAR APPROPRIATE CHEMICAL RESISTANT GLOVES/CLOTHING TO PREVENT SKIN CONTACT.

EYE PROTECTION: DO NOT GET IN EYES. WEAR SAFETY GLASSES/GOGGLES OR A FACE SHIELD.

OTHER PROTECTIVE EQUIPMENT: IMPERMEABLE APRON AND BOOTS. EYE BATH AND SAFETY

SECTION VIII - SAFE HANDLING AND USE INFORMATION

SHOWER.

HYGENIC PRACTICES: DO NOT GET IN EYES, SKIN OR CLOTHING. AVOID INHALING. DO NOT SWALLOW. KEEP AWAY FROM FOOD PRODUCTS. WASH HANDS THOROUGHLY AFTER HANDLING. CHANGE AND WASH CONTAMINATED CLOTHING.

SPECIAL SHIPPING INFORMATION: PAINT. FLAMMABLE LIQUID CLASS:3 UN#1263 PACKING GROUP II. CANUTEC 24 HOUR EMERGENCY NUMBER: (613) 996-6666

SECTION IX - SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE: STORE IN A COOL, DRY, WELL VENTILATED AREA, AWAY FROM ALL INCOMPATIBLE MATERIALS. KEEP AWAY FROM HEAT, SPARKS AND FLAME. KEEP CONTAINER CLOSED. GROUND ALL EQUIPMENT.

OTHER PRECAUTIONS: DO NOT USE PRESSURE TO EMPTY CONTAINERS. DO NOT CUT, GRIND, WELD OR DRILL ON OR NEAR THIS CONTAINER. CONTAINERS WILL RETAIN PRODUCT RESIDUES AND VAPORS. HANDLE EMPTY CONTAINERS AS IF THEY WERE FULL. DO NOT PUNCTURE, INCINERATE, BURN OR STORE ABOVE 45 C. SOME OR ALL OF THE LISTED COMPONENTS OF THIS PRODUCT MAY PRESENT A HEALTH THREAT IN THE FORM OF DUSTS.

SECTION IV - FIRE AND EXPLOSION DATA

FLASH POINT: -18 C
(TAGLIABUE C. C.)
CLASS 3, DIVISION 1

LEL: 1.0%
UEL: 12.8%

EXTINGUISHING MEDIA: DRY CHEMICAL CARBON DIOXIDE FOAM WATER FOG

UNUSUAL FIRE AND EXPLOSION HAZARDS: FLAMMABLE LIQUID (FLASH POINT LESS THAN 100 F/38 C). MAY FORM FLAMMABLE MIXTURES. VAPORS MAY BE EXPLOSIVE IN AIR. ELIMINATE IGNITION SOURCES. GROUND ALL EQUIPMENT. KEEP CONTAINER CLOSED.

SPECIAL FIREFIGHTING PROCEDURES: FIREFIGHTERS SHOULD WEAR SELF CONTAINED BREATHING APPARATUS AND FULL PROTECTIVE CLOTHING. USE WATER SPRAY TO COOL NEARBY CONTAINERS AND STRUCTURES EXPOSED TO FIRE.

SECTION V - HEALTH HAZARD DATA

EFFECTS OF OVER EXPOSURE: *** INHALATION: VAPORS AND MISTS ARE EXTREMELY CORROSIVE. BRONCHITIS, PULMONARY EDEMA, AND CHEMICAL PNEUMONITIS MAY OCCUR. *** INGESTION: HIGHLY TOXIC. MAY BE FATAL. SWALLOWING LARGE QUANTITIES CAUSES HEADACHES, NAUSEA, VOMITING, AND CENTRAL NERVOUS SYSTEM DEPRESSION. MAY CAUSE LIVER AND/OR KIDNEY DAMAGE. VAPORS, MISTS, AND LIQUID ARE CORROSIVE. SWALLOWING CAN CAUSE DEATH. SMALL AMOUNTS OF LIQUID DRAWN INTO THE LUNGS FROM SWALLOWING OR VOMITING MAY CAUSE SEVERE HEALTH AFFECTS (E.G.PULMONARY EDEMA). *** SKIN: VAPORS, MISTS AND LIQUID ARE EXTREMELY CORROSIVE. CAN CAUSE DEFATTING AND DERMATITIS. PROLONGED EXPOSURE MAY CAUSE SKIN SENSITIZATION. CAN CAUSE CHEMICAL BURNS. CAN BE ABSORBED THROUGH THE SKIN CAUSING A HEALTH HAZARD. *** EYES: VAPORS, LIQUID AND MISTS ARE EXTERMELY CORROSIVE. BRIEF CONTACT WILL BE SEVERELY IRRITATING AND MAY DAMAGE THE EYES AND CAUSE PEMANENT INJURY OR BLINDNESS. *** CHRONIC AFFECTS OF OVEREXPOSURE: REPEATED OR PROLONGED EXPOSURES MAY CAUSE SKIN AND/OR RESPIRATORY SENSITIZATION. REPEATED OR PROLONGED EXPOSURES MAY CAUSE LIVER, KIDNEY, AND/OR NEURAL DYSFUNCTION. REPEATED OR PROLONGED EXPOSURES MAY CAUSE DELAYED EFFECTS INVOLVING BLOOD, GASTRO-INTESTINAL, NERVOUS AND/OR REPRODUCTIVE SYSTEMS. ETHYL BENZENE HAS BEEN CLASSIFIED BY THE IARC AS A GROUP 2B SUBSTANCE ON THE BASIS OF SUFFICIENT EVIDENCE FOR CARCINOGENICITY IN LABORATORY ANIMALS BUT INADEQUATE EVIDENCE FOR CANCER IN HUMANS. HIGH EXPOSURES TO XYLENES IN SOME ANIMAL STUDIES HAVE BEEN REPORTED TO CAUSE HEALTH EFFECTS ON THE DEVELOPING EMBRYO/FETUS. THESE EFFECTS WERE OFTEN AT LEVELS TOXIC TO THE MOTHER. THE SIGNIFICANCE OF THESE FINDINGS TO HUMANS HAS NOT BEEN DETERMINED. CARCINOGENICITY IN EXPERIMENTAL ANIMALS. ACCORDING TO THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER (IARC), METHYL ISOBUTYL KETONE IS POSSIBLY CARCINOGENIC TO HUMANS (GROUP 2B) 2-BUTOXYETHANOL MAY CAUSE REPRODUCTIVE EFFECTS BASED ON STUDIES IN LABORATORY ANIMALS AT HIGH GENERALLY TOXIC DOSES. 2-BUTOXYETHANOL MAY CAUSE TERATOGENIC/EMBRYTOXIC EFFECTS BASED ON IN STUDIES IN LABORATORY ANIMALS

MEDICAL CONDITIONS PRONE TO AGGRAVATION BY EXPOSURE: ALLERGIES. SKIN DISORDERS. EYE DISORDERS. CENTRAL NERVOUS SYSTEM DISORDERS. CHRONIC RESPIRATORY DISORDERS.

PRIMARY ROUTE(S) OF ENTRY: INHALATION DERMAL INGESTION

EMERGENCY AND FIRST AID PROCEDURES: *** INHALATION: REMOVE TO FRESH AIR. ASSIST BREATHING IF NECESSARY. KEEP VICTIM WARM AND QUIET. Polyisocyanurate Foam Sheathing Continuous Insulation

AP™ FOIL-FACED

PRODUCT DATA SHEET

DESCRIPTION

Johns Manville AP™ Foil-Faced Foam Sheathing board consists of a uniform closed-cell polyisocyanurate foam core bonded on each side to a foil facer. One side has a reflective foil facer and the other side has a white non-reflective foil facer to suit your building needs.

Polyiso provides one of the highest R-values per inch of any rigid insulation (R-6.0 at 1 inch). Furthermore, when properly installed, AP Foil-Faced Foam Sheathing functions as a water-resistive barrier, vapor barrier and air barrier, eliminating the need to install additional components.

AP Foil-Faced Foam Sheathing is produced with an EPA-compliant hydrocarbon-based blowing agent that has zero Ozone Depletion Potential (ODP) and virtually no Global Warming Potential (GWP); it also meets both CFC- and HCFC-free specification requirements. Polyiso is one of North America's most widely used insulation products and has been cited by the EPA for its responsible impact on the environment.

AP Foil-Faced Foam Sheathing provides exceptional heat, moisture and air control to protect your building's exterior wall assembly.

INSTALLATION

AP Foil-Faced Foam Sheathing is lightweight and can be easily cut with a utility knife or saw. Use maximum board lengths to minimize the number of joints. Vertical joints should be staggered. Butt joints should be centered over framing. To create a water-resistive barrier or an air barrier, treat seams and penetrations as instructed in the installation guide and in accordance with manufacturer's guidelines. Once installed, AP Foil-Faced Foam Sheathing may be left exposed for up to 60 days. Consult your local building department for code requirements.

COMPLIANCES

- ASTM C1289 Type 1, Class 1
- CAN/ULC S704, Type 1, Class 1
- ICC-ES Evaluation Report ESR-3398
- Canadian Construction Materials Centre 13104-L
- Air Barrier Association of America Evaluated Air Barrier Material, Assembly & Water Resistive Barrier
- International Building Code
- International Residential Code
- International Energy Conservation Code
- ENERGY STAR
- ASHRAE 90.1
- California State Insulation Quality Standards

PERFORMANCE STANDARDS

- ASTM C1289, Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
- CAN/ULC-S704, Standard for Thermal Insulation, Polyurethane and Polyisocyanurate, Boards, Faced
- ASTM E84, Test for Surface Burning Characteristics of Building Materials
- CAN/ULC S102, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies
- NFPA 259, Standard Test Method for Potential Heat of Building Materials
- NFPA 285, Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components
- AC 71, Acceptance Criteria for Foam Plastic Sheathing Panels Used as Water-Resistive Barriers
- ASTM E331, Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference
- AATCC Test Method 127, Water Resistance: Hydro Static Pressure Test
- ASTM E1233, Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights, and Curtain Walls by Cyclic Air Pressure Differential
- ASTM E2178, Standard Test Method for Air Permeance of Building Materials
- ASTM E2357, Standard Test Method for Determining Air Leakage of Air Barrier Assemblies

AVAILABILITY

AP Foil-Faced Foam Sheathing is available in the sizes shown in Table 1 (see reverse). For additional information or special size inquiries, please consult a sales representative at 800-654-3103.

PERFORMANCE ADVANTAGES

Thermal Insulation: inch for inch, polyiso has one of the highest energy efficiencies. R-values for AP Foil-Faced Foam Sheathing are shown in Table 1, and physical properties are shown in Table 2 (see reverse). R means resistance to heat flow. The higher the R-value, the greater the insulating power.

Water-Resistive Barrier: when properly installed as part of a Johns Manville Wall System, AP Foil-Faced Foam Sheathing meets the ICC-ES AC71 acceptance criteria for foam plastic sheathing used as a water-resistive barrier. Please see the installation guide for qualifying assemblies and detailed instructions.

Vapor Barrier: at a minimum thickness of one inch, AP Foil-Faced Foam Sheathing has a vapor permeance of 0.05 perms and qualifies as a Class I vapor retarder.

Air Barrier: when properly installed as part of a Johns Manville Wall System, AP Foil-Faced Foam Sheathing meets the Air Barrier Association of America boardstock criteria for materials and assemblies. Please see installation guide for qualifying assemblies and detailed instructions.

Noncorrosive: does not accelerate corrosion of pipes, wiring or metal studs.

Lightweight: easy to handle, can be cut with a utility knife or saw.

ENERGY, QUALITY & ENVIRONMENT

Polyisocyanurate Foam Sheathing Continuous Insulation

PRODUCT DATA SHEET **AP™ FOIL-FACED**

STORAGE
Store AP Foil-Faced Foam Sheathing elevated above the floor or ground and standing water. If stored outdoors, keep dry by covering completely with a waterproof tarpaulin.

LIMITATIONS
AP Foil-Faced Foam Sheathing is nonstructural. The walls must be braced in accordance with the requirements of the applicable code.

WARRANTY
All Johns Manville products are sold subject to Johns Manville's Limited Warranty and Limitation of Remedy. For a copy of these documents, call 800-654-3103.

WARNING
AP Foil-Faced Foam Sheathing is combustible and shall only be used as specified by the local building code with respect to flame spread classification and to the use of a suitable thermal barrier when required.

TECHNICAL SERVICES
Johns Manville can provide technical information to assist in addressing questions regarding AP Foil-Faced Foam Sheathing. Please call 800-654-3103 for technical assistance.

PERFORMANCE DATA

THERE ARE 2 LAYERS OF 2" THICK INSULATING PANELS, FOR A TOTAL OF 4" ALL AROUND. APPLIED ON WALLS, CEILING AND FLOOR.

Entrance®

GLACE-GUARD
Cold Storage Doors

ISO 9001 2008 CERTIFIED

The high performance entrance door!

The Glace-Guard™ Entrance door combines insulation performance and durability, while being attractive and virtually maintenance free. This entrance door, available in 3" or 4" thickness, is made of high quality metal skins. Its panels are insulated with a rigid polyurethane foam core, providing the highest insulation value. Its hardware is engineered to withstand an intensive usage, while providing safety and smoothness of operation.

The Glace-Guard™ Entrance door is operated by industrial cam-lift hinges, heavy duty pull handle and heavy gauge steel automatic door closer, ensuring trouble-free operation and effortless firm closing.

The Glace-Guard™ Entrance door is suitable for coolers and freezers, for both interior and exterior applications. It is your best door investment when performance, durability and low maintenance costs are criteria of selection.

The Glace-Guard™ Entrance door is ideal for applications such as:

- Supermarkets
- Restaurants
- Cold storage distribution warehouses
- Grocery distribution warehouses
- Food processing plants

Cold storage entrance door
Model Glace-Guard™ Entrance ET-300

Entrance®/ Glace-Guard™

ET-300, ET-400 Series

Section 08326

Well insulated:

The Glace-Guard™ Entrance ET-300 (3" thick) and ET-400 (4" thick) doors are insulated with a rigid polyurethane foam core.

Designed for energy savings:

Full perimeter magnetic vinyl gasket and bottom double U-shaped rubber gasket to ensure airtight joints.

Built to last with superior quality materials:

Proven experience and expertise achieve a perfect adherence of the polyurethane foam to the metal skins, ensuring panel strength, rigidity and preservation of insulation value over time. The high quality 26 gauge galvanized steel with superior 25-micron polyester top coat, ensures durability and resistance to corrosion.

Heavy duty hardware for long lasting use and smooth operation:

Industrial cam-lift hinges, heavy duty pull handle and heavy gauge steel door closer, combined with a variety of accessories, provide trouble-free operation, safety and durability.

THERMOSTOP

Technical specifications

Section 08326

Reference product:
Glace-Guard™ Entrance ET-300 or Glace-Guard™ Entrance ET-400, as manufactured by Thermostop Inc., www.thermostop.com

Temperature range:
-20ºF to +120ºF (-29ºC to +49ºC)

Standard dimensions:
- 36" x 84" (914mm x 2134mm)
- 60" x 84" (1524mm x 2134mm)

Other dimensions available upon request.

Thickness:
- Glace-Guard™ Entrance ET-300: 3" (75mm) thick
- Glace-Guard™ Entrance ET-400: 4" (100mm) thick

Panels:
Insulated with rigid polyurethane, foamed in place under high pressure between two metal skins. Standard 26ga. steel skins, white stucco finish. For other skin options, please consult ***Metal skins options.*** Panel frame is made with heavy duty aluminum extrusions.

Door frame and thermal barrier:
Door frame is made of shock-proof 5/32" (4mm) thick exterior and interior extruded aluminum angles. The exterior aluminum angle has an incorporated resin thermal break.

Hinges:
- For doors with width under 60" (1524mm): Self-closing and reversible high pressure die-cast zinc hinges with self-lubricating nylon cams. Brushed chrome finish.

- For doors with width of 60" (1524mm) and greater: Heavy duty self-closing and reversible high pressure die-cast zinc flanges, 3/16" (5mm) thick steel strap. Gray finish.

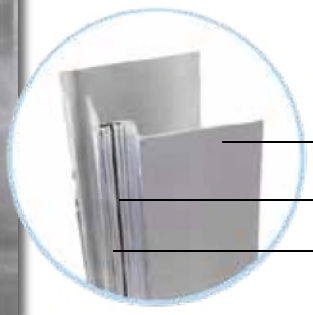
Pull handle:
High pressure die-cast zinc cylinder locking handle, complete with emergency inside release system. Brushed chrome finish.

Door closer:
Heavy gauge steel mechanical door closer, complete with extra-wide hook. Chrome finish.

Perimeter magnetic gasket:
A full perimeter magnetic vinyl gasket insures that the door is airtight and vapour-proof on the perimeter joint.

Bottom door gasket:
Extruded aluminum retainer with two U-shaped rubber gaskets to insure airtight joints.

Heat trace (optional):
For freezer applications, the door is equipped with a heat trace on four (4) sides of the door, preventing ice or frost accumulation and eliminating the need to have a heated threshold.



Kick plate (optional):
36" (914mm) high steel kick plate, on full door width, to protect the door bottom against forklift impacts.
- 16ga. galvanized steel, smooth finish
- 18ga. stainless steel, #304 finish

Metal skins options:

Steel	Finish
26ga. (0.41mm)	stucco, white
20ga. (0.86mm)	smooth, white
16ga. (1.42mm)	smooth, painted

Aluminum	Finish
24ga. (0.60mm)	stucco, white or grey RAL-9006

DETAIL A

SECTION

Specifications:

☒ ET–400: 4"(100mm)
☒ Cooler application (36°F and above)

Standard Features:

*Polyurethane insulated panels
*20ga galvanized steel, white, smooth finish with ribs
*Heavy–duty mirror frame 5/32" (4mm) in two extruded angles. Aluminium mill finished.
*Magnetic seals on door frame perimeter.
*Bottom double blade seal on door panel.
* 3 (three) 10" cam–lift hinges.
* 1 (one) LATCH handle with padlock provision (padlock by others) & inside MUSHROOM release

Latch handle is chrome finished steel. Hinges are brush chrome finished steel

Other Features:

* Exterior chain with S hook and eye bolt
* Interior storm door chain with spring

ITEM # 1825

STANDARD LOUVER

SQUARE LOUVER

US Patent No. 6,176,776

1825 NARROW JAMB HEATED VENT

- Exclusive, patented Kason ventilator seals tight and opens at lowest pressure of any competitive vent.
- Lightweight, springless valves provide greater air flow at lower pressure than spring-loaded valves.
- Lower pressure allows doors to open and close with ease and reduces stress on walk-in enclosure joints, reducing chance of leaks.
- Computer-designed heater eliminates valve freezing.
- Narrow profile unit mounts in door jamb.
- Port installs through 2 1/2" (63.5mm) diameter hole with minimal wiring.
- Poppet valves close tightly to prevent air leakage.
- Engineered to optimize the self-closing potential of Kason Walk-in hinges, latches and door closers.

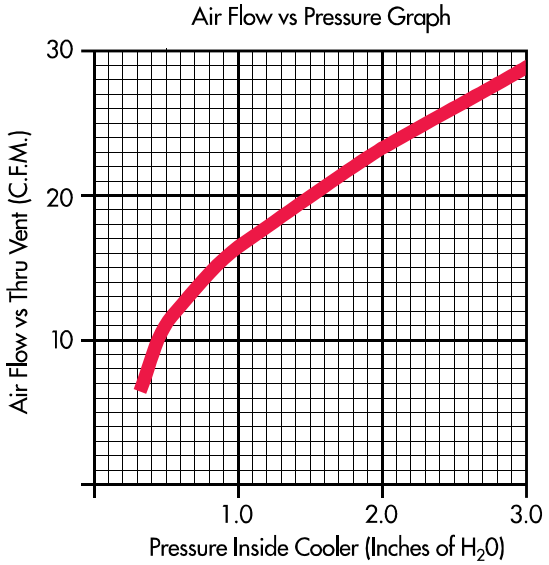
PERFORMANCE TESTED

Comprehensive performance tests show that Kason 1825 pressure relief ports provide better air flow at lower pressure and greater frost resistance than competitive ventilators.

SPECIFICATIONS

MATERIAL:
Gray ABS plastic valve body and louvers, PVC tube, internal aluminum and stainless steel parts.

POWER:
.04 amp @ 120 VAC; 4W heater.
.02 amp @ 230 VAC; 4W heater.



UL LISTING:
File No. E57306

SELECTION:
See Quantity Selector Chart, page B-59.

MOUNTING:
No. 1825 only mounts horizontally. Drilled for No. 10 (5.0mm) screws. Requires 2-1/2" (63.5mm) diameter hole.

Model No.	Item	Qty/Carton	Wgt./Carton

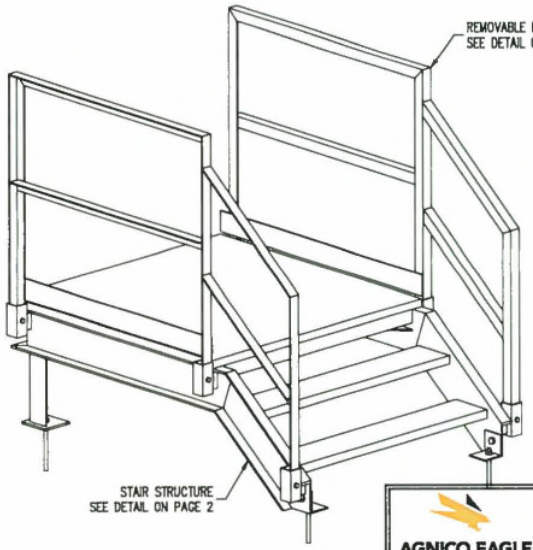
Walkways and Stairways Check List

ITR Number : AEM-ME-ITR-004
Contract no. : C22466T

SYSTEM: FUEL TANKS FARM	TAG NO. N/A	
LOCATION: INDUSTRIAL SITE	AREA: ALL	UNIT:



Check when satisfactory. If not satisfactory, include nonconformance report, control and re-inspect when correct

DESCRIPTION	STATUS	REMARKS
1. Installed in accordance with drawings and specifications		
2. Stairs and ladders are securely anchored		
3. Bolts are correct type and length		
4. Bolts tightened (indicated by the burnishing or preening of the corners by the impact wrench)		
5. Ladders and stairs are free of obstructions and are the correct width		
6. The first and last rung of stair riser is the correct height from grade or a platform		
7. Safety chains or bars are installed at ladder openings		
8. Hand grip surfaces on hand rails and ladders are ground smooth		
9. Toe plate is rigid and installed at all required locations		
10. Handrails & toe plates terminating at structural members are welded at structural joint		
11. Penetrations of pipe, ducts and conduit through platforms are located properly, correct size and banded with toe plates		
12. All grating secured to support steel with removable saddle clip anchors		
13. All paint and galvanized damaged areas have been touched up		
14. Ensure all valve operators, chain operators and access to valve handles		
15. Verify proper installation of fall arrest anchor points

WSP SHOP DRAWING DATA SHEET

Affixing this stamp confirms that an administrative approval and/or a verification of compliance with shop drawings or specifications was made, but does not entail the liability of the author of the work or its owner with regards to this shop drawing or data sheet, for which the contractor is the sole responsible.

☑ Reviewed ☐ Reviewed as noted
☐ Rejected ☐ Filed for records

The contractor, supplier and/or sub-contractor is responsible for: comfirming and coordinating all quantities and dimensions; selecting fabrication processes and techniques of construction; coordinating his or her work with that of all other trades and performing all work in a safe and satisfactory manner.

Bar-Rust[MC] 235

Revêtement époxy à usages multiples

Numéro de catalogue 235-K-XXXX

DESCRIPTION

Revêtements intérieurs de réservoirs et canalisations
- Réservoirs d'eau potable
- Pompes submergées, cavités humides et tuyaux de drainage

Structures d'acier, équipement et maçonnerie
- Usines de pâtes et papiers
- Usines de produits chimiques et de fabrication d'engrais
  Usine d'épuration et de traitement des eaux usées
- Réservoirs et canalisations
- Ponts

Maçonnerie et béton
- Entrepôts
- Usines de traitement des aliments
- Usines de fabrication de boissons

Fabrication et nouvelle construction
- Accélère la production, même à de basses températures
- Revêtement à usages multiples convenant à de nombreuses surfaces

CARACTÉRISTIQUES

Protection exceptionnelle contre la corrosion
- Résistance à l'immersion en eau douce
- Conseillé dans les endroits où l'on trouve des produits chimiques corrosifs

Réduit le coût de préparation des surfaces
- Convient à de nombreuses surfaces
- Adhère très bien à la rouille tenace
- Adhère bien aux surfaces humides

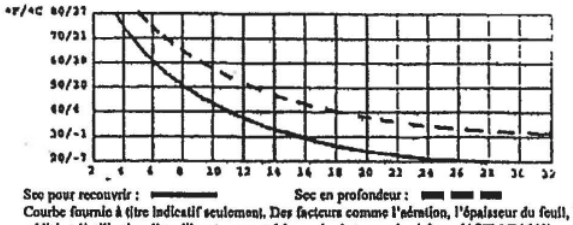
Durcit à de basses températures
- Durcit à 0 °F (-18 °C)
- Séchage rapide pour recouvrir

Application
- Auto-apprêtant

Approbations
- EPA (Environmental Protection Agency - États-Unis) - eau potable (blanc cassé et chamois seulement)
- Cargo de grain - North England Ind. Health Ser.
- MIL-P-23236B(SH), types 1 et IV, classe 2
- Santé et bien-être social Canada - aliments séchés, cales à poisson (blanc cassé et chamois seulement)
- Approbation de l'USDA pour contact occasionnel avec la nourriture
- MIL-P-24647 et chapitre 631, tableau 631-8-10, quille, rail et superstructure

DONNÉES TECHNIQUES

Type de revêtement	Époxy catalysé
Couleurs	**Numéro de catalogue**
Voir la carte des couleurs	235-K-XXXX
Emballage	5 gal (18,5 l) et 1 gal (3,7 l) Ensemble de deux constituants
Rapport volumique des constituants	4 à 1
Lustre	Semi-lustré
Point éclair	100 °F (38 °C) Setaflash
Diluant	
Pour extérieur et nettoyage	Devoe T-10
Pour intérieur	Devoe T-4
Pour eau potable	Devoe T-5
Sur d'anciens revêt. alkydes	Devoe T-5
Durée de vie en pot	4,5 heures à 77 °F (25 °C)
Stabilité en stockage	Plus de 2 ans
Densité	11 lb/gal (1,3 kg/l)
Temps d'incorporation	15 minutes à 77 °F (25 °C)
COV - EPA 24	2,4 lb/gal (292 g/l)
Résistance à la température	250 °F (121 °C) sec



Pourcentage de solides/volume
68 % ASTM D2697 (7 jours)

Rendement superficiel volumique
1091 pi²/gal à un millième de po
26,9 m²/l à 25 microns

Épaisseur du feuil recommandée
5,9 - 11,8 millièmes de po humide pour obtenir
4,0 - 8,0 millièmes de po une fois sec

Application Pulvérisateur, pinceau ou rouleau

Courbe de temps de séchage
Heures à 5 millièmes de po (125 microns) E.F.S.

Sec pour recouvrir : ——— Sec en profondeur : — — —

Courbe fournie à titre indicatif seulement. Des facteurs comme l'aération, l'épaisseur du feuil, l'humidité et l'utilisation d'un diluant peuvent faire varier le temps de séchage (ASTM D1640).

GUIDE D'APPLICATION

Préparation de la surface

Tous les revêtements appliqués directement sur le métal offrent un rendement maximal lorsque la surface est décapée jusqu'à ce que le métal soit presque blanc. Cependant, le décapage au jet d'abrasif n'est pas toujours possible pour des raisons de coût ou autres. Les revêtements Bar-Rust ont été conçus pour être appliqué sur des surfaces qui n'ont pas reçu la meilleure préparation.La préparation recommandée pour une application de revêtement Bar-Rust 235 comprend l'enlèvement de l'eau, de la saleté, de l'huile, des débris et des écailles de rouille. Pour obtenir de meilleurs résultats, nettoyer la surface avec le nettoyeur Devprep 88 et laver ensuite avec de l'eau à haute pression. La norme minimale à respecter pour les applications sur des surfaces non immergées est la norme SSPC-SP2 du *Steel Structures Painting Council* ou la norme *Swedish Standard DSt2*. Pour les applications sur des surfaces immergées, la norme minimale est la norme SSPC-SP3 ou la norme *Swedish Standard DSt3*. Dans les deux cas, on peut aussi appliquer une couche de l'apprêt Pre-Prime 167 sous une couche de Bar-Rust 235. La plupart des époxy ont un pouvoir de repeinturage limité. S'adresser à un représentant Devoe pour obtenir plus de renseignements à ce sujet.

Mélange et dilution

Le revêtement Bar-Rust 235 est offert en ensemble de deux constituants de 5 gallons (18,5 litres) ou de 1 gallon (3,7 litres) qui contiennent chacun la quantité appropriée d'ingrédients. Les constituants doivent être bien mélangés ensemble. Brasser au mélangeur la base jusqu'à l'obtention d'une préparation lisse et homogène. Ajouter graduellement le convertisseur tout en mélangeant. Une fois tout le convertisseur ajouté, continuer à mélanger lentement. Allouer 15 minutes pour l'incorporation à 77 °F (25 °C). En général, il n'est ni nécessaire ni souhaitable de diluer la préparation. Toutefois, dans des conditions climatiques extrêmes, une petite quantité (10 % ou moins par volume) de l'un des diluants décrits au recto peut être ajoutée conformément aux règlements locaux relatifs à la teneur en composé organique volatil (COV) et à la qualité de l'air. Utiliser le diluant Devoe T-5 pour les applications de Bar-Rust 235 sur des réservoirs d'eau potable ou sur d'anciens revêtements alkydes. N'ajouter le diluant qu'après avoir bien mélangé les deux constituants. La durée de vie en pot de la préparation est de 5 heures à 77 °F (25 °C). Si elle est additionnée d'un diluant, sa durée de vie est de 4,5 heures à 70 °F (21 °C). Après cette période, la préparation peut sembler liquide, mais l'épaisseur du feuil risque de ne pas être adéquate et la pulvérisation moins bonne. À des températures plus élevées, la durée de vie en pot de la préparation diminue tandis qu'à des températures plus basses, elle augmente.

Application

Le revêtement Bar-Rust 235 peut être appliqué avec un pulvérisateur conventionnel ou sans air. On recommande, pour les applications avec un pulvérisateur conventionnel, un pistolet Graco n^{o} 800 muni d'une buse de 0,070 po ou d'une buse plus large et une tête d'air à bon pouvoir de dispersion. La pression du liquide doit rester basse, à environ 15 psi (1,0 bar) et la pression de l'air doit être juste assez élevée pour obtenir une bonne dispersion du revêtement. Une pression d'air trop élevée peut causer une surpulvérisation.Pour les applications avec un pulvérisateur sans air, on recommande une pompe Bulldog Graco 30:1, une pompe Senator 35:1 ou une pompe plus puissante. Une buse de 0,021 à 0,025 po permettra d'obtenir une bonne forme de jet. Pour obtenir un résultat optimal, les tuyaux à liquide devraient avoir un d.i. d'au moins 3/8 de po et ne devraient pas avoir plus de 50 pi de longueur. Si on utilise un tuyau plus long ou que l'on fait l'application par temps froid, une pompe plus puissante ou l'ajout d'un diluant est recommandé. S'assurer d'obtenir un feuil d'épaisseur appropriée si on applique le revêtement Bar-Rust 235 au pinceau ou au rouleau. Appliquer une peinture anti-salissure sur le revêtement Bar-Rust 235 lorsque celui-ci n'est plus collant mais encore sensible à la pression du doigt. Les revêtements époxy peuvent changer de couleur et peuvent farîner lorsqu'ils sont exposés directement au soleil.

Systèmes de peintures pour revêtements de réservoirs : Deux couches de Bar-Rust 235 de 4 à 8 millièmes de po (100 à 200 microns) par couche, plus deux couches au pinceau sur les arêtes vives et les joints de soudure. Utiliser des couleurs différentes pour chaque couche, y compris les couches appliquées au pinceau.

Aération

Une bonne aération est essentielle pour obtenir un bon rendement du revêtement Bar-Rust 235 et pour la personne qui effectue le travail. S'assurer d'alimenter la pièce où le peinturage est effectué en air sec et frais afin que le solvant s'évapore. Comme les vapeurs de solvant sont plus lourdes que l'air, faire en sorte que les bouches d'aération atteignent les parties inférieures de la pièce. L'aération pendant le durcissement permet aux solvants contenus dans le revêtement de s'évaporer. Allouer une période d'aération de 7 jours pour le durcissement des réservoirs.

Précautions

Consulter la fiche technique sur la sécurité des substances et l'étiquette du produit pour connaître les mesures de sécurité et les précautions à prendre.

DEVOE HIGH PERFORMANCE COATINGS

DEVTHANE® 359

Mastic à l'uréthane aliphatique brillant à pouvoir garnissant élevé pour application directe sur métal (DTM)
N° de réf. 359KXXXX

DESCRIPTION DU PRODUIT

Générique : uréthane aliphatique acrylique

Description générale : peinture émail brillante à l'uréthane aliphatique, à deux constituants, durcissement chimique, au pouvoir couvrant et au rendement élevés, conçue pour des surfaces nécessitant une stabilité maximale de brillance et de couleur.

Usages courants : utiliser sur des surfaces d'acier adéquatement préparées, planchers d'acier ou de béton, maçonnerie, cloisons sèches, plâtre, métal, blocs de béton, métal galvanisé, aluminium, béton coulé et brique émaillée. Idéal pour une utilisation, à l'intérieur et à l'extérieur, sur l'acier structural, la tuyauterie, les revêtements métalliques, le mobilier de cabines de contrôle, les convoyeurs, les pompes, les réservoirs de stockage, les tours éoliennes, les moteurs, la machinerie et les véhicules de transport. Peut aussi être utilisé dans les aires de service intense des usines de transformation des aliments, des laiteries, des écoles, des restaurants, des hôpitaux, des établissements correctionnels, des manufactures, des stades, des arénas et des parcs d'amusement.

CARACTÉRISTIQUES

Avantages :

- excellente stabilité de brillant et de couleur
- excellente résistance à l'abrasion et aux produits chimiques
- faible teneur en COV
- application facile avec un pinceau, un rouleau ou un pulvérisateur
- grand choix de couleurs, incluant les couleurs de sécurité
- excellente résistance aux maculations, au piquage et aux égratignures
- pouvoir couvrant élevé
- excellentes propriétés d'application
- applicable directement sur le métal

Restrictions : la couleur pourrait changer lorsque la température approche la limite de 250°F (121°C), mais le feuil demeurera intact.

DONNÉES TECHNIQUES

Couleur : disponible en blanc, noir et une gamme complète de couleurs sur commande
Fini : brillant élevé
Solvant de réduction : diluant T-9 (pulvérisateur), T-17 (pinceau ou rouleau)
Solvant de nettoyage : diluant T-9
Poids/gallon : 10,3 lb/gal (1,23 kg/l) – varie selon la couleur
COV (EPA 24) : 2, 8 lb/gal (340 g/l) – varie selon la couleur
Solides par volume (ASTM D-2697-7 jours) : 60 %
Rendement théorique à 1, 0 mil (25 microns) sec: 962 pi²/gal (23,7 m²/l)
Épaisseur de feuil recommandée : 4,0-6,0 mils (100-150 microns) sec – 8,7-10,0 mils (168-250 microns) humide. L'application directe sur le métal requiert une épaisseur de feuil sec de 5,0-6,0 mils (125-250 microns).
Systèmes : Veuillez consulter le guide du système approprié, les spécifications propres au travail ou votre représentant(e) d'ICI Peintures pour les systèmes indiqués pour ce produit. Choisir les systèmes en tenant compte de l'environnement particulier où ils seront appliqués.
Température de service maximale : 250° (121°C) sec
Temps de séchage minimum (ASTM D-1640) : à 4 mils (200 microns) sec

Température du subjectile	40°F (4°C)	60°F (16°C)	80°F (27°C)
Prêt à recouvrir - minimum	8 heures	5 heures	3 heures
Sec en profondeur	14 heures	9 heures	5 heures
Prêt à recouvrir - maximum			
par le même produit	2 semaines	2 semaines	2 semaines

Le temps de séchage peut être influencé par la ventilation, l'épaisseur du feuil, le taux d'humidité, le diluant et d'autres facteurs.
Avertissement : Les données qui précèdent sont uniquement des directives générales. Consultez toujours votre représentant(e) d'ICI Peintures pour les délais de recouvrement appropriés, étant donné que le délai de recouvrement maximum de ce produit peut diminuer ou augmenter de façon importante en raison de conditions variées incluant, mais sans s'y limiter, l'humidité, la température de la surface et l'utilisation d'additifs ou de diluants. L'utilisation d'accélérateurs ou de durcissement forcé peut diminuer le délai de recouvrement de couches individuelles. Les délais de recouvrement qui précèdent pourraient ne pas s'appliquer si un produit de recouvrement autre qu'un de ceux énumérés ci-dessus est utilisé. Si le délai de recouvrement maximum est dépassé, veuillez consulter votre représentant(e) d'ICI Peintures pour obtenir les recommandations appropriées afin d'améliorer l'adhérence. Le défaut de se conformer à ces précautions peut entraîner une délamination entre les couches.
Stabilité en stockage : plus de 12 mois à 77°F (25°C) non ouvert
Dureté : (ASTM D-3363, séchage pendant 7 jours à 77°F (25°C) : 5H
Proportions de mélange : 4 (base) : 1(convertisseur) – voir les instructions de mélangeage
Induction : aucune
Durée de vie en pot : 8 heures à 77°F (25°C) et 50% HR.

DONNÉES DE RENDEMENT

Adhérence : (ASTM D-4541) – Excellente
Résistance au brouillard salin : (ASTM B-117) – Excellente
Résistance à l'abrasion : (ASTM D-4060) – Excellente
Résistance à l'humidité : (ASTM D-2247) – Excellente
Exposition à l'extérieur : 45° sud de la Floride – Excellente

Résistance aux produits chimiques : (ASTM D-1308 – contact de 24 h) – excellente. Résiste aux éclaboussures et au déversement d'alcalis, sels, eau, graisses, produits alimentaires et détergents.
Résistance aux taches : (ASTM D-1308 – contact pendant une semaine) – excellente. Résiste, entre autres, aux taches de crayon, rouge à lèvres, café, terreau, poli à chaussures, jus de raisin, encre, marqueur et peinture pulvérisée.

DANGER! INFLAMMABLE. NOCIF OU MORTEL EN CAS D'INGESTION. Lire l'étiquette et la fiche signalétique avant d'utiliser.
Voir d'autres mises en garde sur la page suivante.

PRÉPARATION GÉNÉRALE DE LA SURFACE

Toutes les surfaces doivent être saines, sèches, propres et exemptes d'huile, de graisse, de moisissures, d'agents de démoulage, de produits de cure, de laitance ou autres substances étrangères. Pour assurer une apparence optimale, l'apprêt ou la couche de fond devra être lisse et exempte de tout défaut de surface tel que coulure, pulvérisation sèche et peau d'orange importante.

Nouvelles surfaces : Acier – Pour une application directe sur l'acier, décaper au jet d'abrasif jusqu'à ce que le métal soit presque blanc conformément aux normes SSPC-SP10 ou SSI-Sa2½. Le profil de l'acier, après le décapage, devrait être de 1,5-2,5 mils (38-63 microns) de profondeur et dentelé plutôt que bosselé (à la suite d'un grenaillage), ou nettoyer et apprêter avec l'époxy DEVRAN® 224HS, BAR-RUST® 235 ou BAR-RUST® 233H. Bloc de béton. – obturer avec l'époxy DEVRAN® 224HS, BAR-RUST® 235 ou BAR-RUST® 233H. Fibre de verre – essuyer avec le solvant, poncer légèrement et essuyer de nouveau avec le solvant. Apprêter avec le DEVRAN® 201. Planchers de béton, béton coulé – durcir au moins 30 jours.

Décaper à l'acide ou au jet d'abrasif le béton lisse, émaillé ou taché de laitance. Apprêter avec l'époxy DEVRAN® 224HS, BAR-RUST® 235 ou BAR-RUST® 233H dilué à 25% avec le diluant recommandé, ou utiliser l'enduit pénétrant PRE-PRIME® 167. Cloisons sèches – apprêter avec un apprêt vaporifuge au latex acrylique. Acier galvanisé et aluminium – enlever la saleté et les huiles avec un solvant ou avec le nettoyeur DEVPREP® 88, puis rincer à grande eau. Apprêter avec l'apprêt époxy DEVRAN® 201 ou 205. Pour une application directe sur le métal, décaper légèrement conformément à la norme SSPC-SP-7 pour créer un profil en surface.

Surfaces déjà peinturées : enlever la peinture cloquée et écaillée. Poncer légèrement les surfaces brillantes. Vérifier si il y a décollement ou saignement des anciens revêtements. Si oui, les enlever. Apprêter les surfaces nues avec l'apprêt spécifié à l'article Surfaces neuves.

MODE D'EMPLOI

Coloration : colorer la base appropriée avec les colorants CHROMA-CHEM 844. (Ne pas utiliser de colorants à base d'eau). Ajouter les colorants seulement à la portion base. Mélanger à fond avant d'ajouter la portion convertisseur. Lorsque le DEVTHANE® 359 est appliqué directement sur le métal, on obtient de meilleurs résultats en utilisant des couleurs prémélangées.

Dilution : normalement, la dilution n'est ni nécessaire ni souhaitable. Toutefois, dépendant des règlements locaux relatifs aux COV et à la qualité de l'air, une petite quantité (5% ou moins par volume) de solvants indiqués au recto peuvent être ajoutées. Une petite quantité (5% ou moins par volume) de diluant T-17 améliorera l'application au rouleau ou au pinceau. Si les règlements locaux relatifs au COV et à la qualité de l'air ne posent pas problème, et selon l'assemblage individuel de l'équipement de pulvérisation, une dilution additionnelle sera tolérée pour obtenir le fini individuel souhaité.

Mélangeage : la peinture-émail DEVTHANE® 359 est un produit à deux constituants fourni en ensembles de 5 gallons (18,925 l) et 1 gallon (3,785 l) qui contiennent la proportion adéquate d'ingrédients. Tout le contenu d'un contenant doit être mélangé avec l'autre. Il est important que les pièces d'équipement soient exemptes d'humidité et que celle-ci ne contamine pas le revêtement. Mélanger d'abord la portion base au malaxeur mécanique pour obtenir un mélange lisse et homogène. Puis ajouter le convertisseur lentement en agitant constamment. Quand tout le convertisseur a été ajouté, continuer de mélanger lentement. La durée d'utilisation du mélange est de 8 heures à 77°F (25°C). Des températures plus élevées et une humidité excessive réduiront le temps d'utilisation du revêtement, alors que des températures plus basses l'augmenteront.

Application : appliquer avec un pulvérisateur conventionnel ou sans air, un rouleau ou un pinceau. Pour la pulvérisation sans air, utiliser tout pulvérisateur sans air pneumatique, électrique ou à gaz ayant une capacité de 3000 psi (207 bars) et compatible avec des buses de 0,015 à 0,019" (0,375-0,475 mm). Des pistolets multiples et des longs tuyaux de liquide exigent des pompes ayant une capacité adéquate. Pour une pulvérisation à l'air, utiliser un pistolet DeVilbiss MBC-510, une buse « E » ou « D » et un chapeau d'air 704 ou l'équivalent. Ajuster la pression du liquide et de l'air pour obtenir une bonne forme de jet. L'application au pinceau et au rouleau peut nécessiter plusieurs couches pour obtenir l'épaisseur de feuil et/ou l'opacité requise.

Note : S'assurer que tout l'équipement de pulvérisation et les tuyaux de liquide sont propres et exempts d'eau ou de solvants non compatibles. Pour une application au pinceau, utiliser des pinceaux secs, propres et de bonne qualité. Pour une application au rouleau, utiliser des rouleaux neufs à poils courts. Ne pas appliquer sur des surfaces mouillées ou par temps très humide alors qu'une condensation ou un brouillard pourrait se déposer sur le revêtement pendant le durcissement.

Rendement superficiel spécifique : couvre 160-241 pi²/gal (3,9-5,9 m²/l) dépendant de la texture de la surface et de la porosité. Prévoir des pertes dues à la surpulvérisation ou aux aspérités des surfaces.

Temps de séchage : à 70°F (21°C) et 50% HR, prêt à recouvrir en 5 heures et sec en profondeur en 7 heures.

Nettoyage : utiliser le diluant T-9

Accélération du durcissement : on peut utiliser le catalyseur uréthane 070A0000 pour accélérer le durcissement si la température est à 40°F (5°C) ou moins. L'ajout de 1 (29,6 ml) ou 2 oz (59.12 ml) par gallon (3,785 l) réduira le temps de séchage en profondeur d'environ un tiers ou de moitié respectivement à 40°F (5°C). La durée de vie en pot sera réduite de moitié ou des trois quarts.

PRÉCAUTIONS

DANGER! LIQUIDE ET VAPEUR INFLAMMABLES. CAUSE DES BRÛLURES AUX YEUX ET À LA PEAU. NOCIF OU MORTEL EN CAS D'INGESTION. RISQUE D'ASPIRATION – PEUT PÉNÉTRER DANS LES POUMONS ET CAUSER DES DOMMAGES. NOCIF EN CAS D'INHALATION. PEUT AVOIR DES EFFETS SUR LE SYSTÈME NERVEUX CENTRAL, CAUSANT NOTAMMENT DES ÉTOURDISSEMENTS, MAUX DE TÊTE OU NAUSÉES. CAUSE L'IRRITATION DES VOIES RESPIRATOIRES. PEUT CAUSER DES RÉACTIONS ALLERGIQUES CUTANÉES ET PULMONAIRES. DANGEREUX SI ABSORBÉ PAR LA PEAU. UNE SUREXPOSITION PEUT CAUSER DES DOMMAGES AU SANG, AU FOIE ET AUX REINS. UTILISER UNIQUEMENT AVEC UNE VENTILATION ADÉQUATE. GARDER HORS DE LA PORTÉE DES ENFANTS. AVIS : les produits de cette série contiennent des solvants. Des rapports ont établi un lien entre une surexposition professionnelle répétée et prolongée aux solvants, et des dommages permanents au cerveau et au système nerveux. Un usage abusif intentionnel, en concentrant et en inhalant volontairement le contenu, peut être dangereux ou mortel. Pour toute information urgente, composer le 1 800 545-2643. Pour plus d'informations relatives à la sécurité, consulter la fiche signalétique de ce produit. Garder loin de la chaleur, des étincelles et des flammes. Ne pas fumer. Les vapeurs pourraient s'enflammer. Éteindre toutes les flammes, brûleurs, poêles, appareils de chauffage et becs brûleur et débrancher tous les moteurs et appareils électriques avant d'utiliser et jusqu'à ce que les vapeurs aient disparu. En cas de ponçage, porter un masque antipoussière pour éviter de respirer la poussière de ponçage. Ne pas respirer les vapeurs ou brumes de pulvérisation. Si vous éprouvez des larmoiements, des maux de tête ou des étourdissements, quittez l'endroit. Un respirateur bien utilisé peut offrir une protection additionnelle. Demander l'avis d'un professionnel avant son utilisation. Refermer le contenant après chaque usage. PREMIERS SOINS : en cas de contact avec la peau, bien laver rapidement à l'eau et au savon, et enlever les vêtements contaminés. En cas de contact avec les yeux, rincer immédiatement à grande eau, pendant au moins 15 minutes. Consulter un médecin de toute urgence. En cas d'ingestion, consulter immédiatement un médecin. Si l'inhalation entraîne un malaise, aller dans un endroit où l'air est frais. Si le malaise persiste ou que la respiration devient difficile, consulter un médecin. Note : ces mises en garde s'appliquent à l'ensemble des produits de cette série. Avant d'utiliser, lire et suivre les recommandations sur la FS et sur l'étiquette.

EXPÉDITION

Classification : peinture, 3 PG III, UN1263 (liquide inflammable)
Point d'éclair : 80°F (27°C)
Emballage : ensemble d'un gallon (3,785 l) — 0,8 gallon (3,04 l) de base — 0,2 gallon (0,76 l) de convertisseur
ensemble de 5 gallons (18,925 l) — 4 gallons (15,14 l) de base — 1 gallon (3,785 l) de convertisseur

Poids à l'expédition :
ensemble de 4 – 1 gallon (15,14) – 60 lbs (27,2 kg)
ensemble de 5 gallons (18,925) – 66 lbs (29,9 kg)

359KXXXX (08/01)
Formulaire n° 68656B

Work Order Check List

Client: CONSTRUCTION PROMEC Quote: 4048 Work Order: 80049

Part Description: (11) CONTAINER CATWALK

N/A	YES	
☐	☑	Validate Material & Preparation
☐	☑	Visual Inspection complete. (Sharp edges, spatter, welding as per drawing...)
☐	☑	Dimensional Report.
☐	☑	Weld Map.
☐	☑	NDT (LPI, MPI, UT, X-Ray and Visual) refer to ITP & quality assurance program.
☐	☑	All parts fit as an assembly if required by production manager. (Revise packing list?)
☐	☑	Shop bolts required? If yes tightened. (How?)
☐	☑	Sandblasting & Coating Report.
☐	☑	Pictures.
☐	☑	All items on W.O. accounted for. (Work order screening)
☐	☑	Components packaged for shipping. (Includes ship loose items, belts, seals, motors....)
☑	☐	Are all extra materials and consumables entered on W.O.?
☑	☐	Are all error reports filled and attached?
☑	☐	Are all non conformance documented?

Note: Once complete and signed, returned to Project Manager.

Remark: Des fer angles ont été ajoutés sous les marches pour pouvoir les fixer dans les lumons

NORMEX

Work Order Check List

Client: CONSTRUCTION PROMEC Quote: 4048 Work Order: 80066

Part Description: PIPE CATWALK HANDRAILS (5L + 5R)

N/A	YES	
☐	☑	Validate Material & Preparation
☐	☑	Visual inspection complete. (Sharp edges, spatter, welding as per drawing...)
☐	☑	Dimensional Report.
☐	☑	Weld Map.
☐	☑	NDT (LPI, MPI, UT, X-Ray and Visual) refer to ITP & quality assurance program.
☐	☑	All parts fit as an assembly if required by production manager. (Revise packing list?)
☑	☐	Shop bolts required? If yes tightened. (How?)
☐	☑	Sandblasting & Coating Report.
☐	☑	Pictures.
☐	☑	All items on W.O. accounted for. (Work order screening)
☐	☑	Components packaged for shipping. (Includes ship loose items, belts, seals, motors....)
☑	☐	Are all extra materials and consumables entered on W.O.?
☑	☐	Are all error reports filled and attached?
☑	☐	Are all non conformance documented?

Note: Once complete and signed, returned to Project Manager.

Remark: Les gardes-corps ont été faluignés dans un gabarit afin d'en assurer l'exactitude et la similitude.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum particles may slip during handling or transportation.

PRODUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. Steel containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE CARE.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.

Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait affecter en cas d'irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.

Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. Si chauffé, de l'oxyde de cuivre, de zinc, de nickel, d'étain, de cadmium et/ou des vapeurs de plomb pourraient s'échapper. Les produits d'aluminium peuvent glisser lors de leur manipulation ou transportation.

TOUS LES PRODUITS DOIVENT ÊTRE ATTACHÉS SOLIDEMENT LORS DU TRANSPORT ET DE LA MANIPULATION.

Lors de la coupe, les courroies d'acier peuvent rebondir et causer des blessures. MANIPULEZ AVEC PRÉCAUTION.

En cas d'une surexposition aux émanations, reculez-vous et respirez de l'air frais. S'il y a contact avec la peau lavez la région affectée avec de l'eau et du savon. Si les symptômes persistent consultez votre médecin.

POUR PLUS D'INFORMATION, CONSULTEZ LA FEUILLE DE DONNÉES DE SÉCURITÉ.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

...e above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.
...olonged overexposure to dust or fumes during welding, burning, grinding or machining may result in ...spiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL ...OTECTIVE EQUIPMENT.
...r Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, ...pper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum ...oducts may slip during handling or transportation.
...UCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. ...t containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE ...
...posure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. ...btain medical attention if symptoms persist.
...EE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.
Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.
Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. Si chauffé, de l'oxyde de cuivre, de zinc, de nickel, d'étain, de cadmium et/ou des vapeurs de plomb pourraient s'échapper. Les produits d'aluminium peuvent glisser lors de leur manipulation ou transportation.
TOUS LES PRODUITS DOIVENT ÊTRE ATTACHÉS SOLIDEMENT LORS DU TRANSPORT ET DE LA MANIPULATION.
Lors de la coupe, les courroies d'acier peuvent rebondir et causer des blessures. MANIPULEZ AVEC PRÉCAUTION.
En cas d'une surexposition aux émanations, retirez-vous et respirez de l'air frais. S'il y a contact avec la peau lavez la région affectée avec de l'eau et du savon. Si les symptômes persistent consultez votre médecin.
POUR PLUS D'INFORMATION, CONSULTEZ LA FEUILLE DE DONNÉES DE SÉCURITÉ.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum products may slip during handling or transportation.

PRODUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. Material containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE CARE.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.
Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QUUN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.
Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum products may slip during handling or transportation.

PRODUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. Cut containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE CAUTION.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.

Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.

Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. Si chauffé, de l'oxyde de cuivre, de zinc, de nickel, d'étain, de cadmium et/ou des vapeurs de plomb pourraient s'échapper. Les produits d'aluminium peuvent glisser lors de leur manipulation ou transportation.

TOUS LES PRODUITS DOIVENT ÊTRE ATTACHÉS SOLIDEMENT LORS DU TRANSPORT ET DE LA MANIPULATION.

Lors de la coupe, les courroies d'acier peuvent rebondir et causer des blessures. MANIPULEZ AVEC PRÉCAUTION.

En cas d'une surexposition aux émanations, retirez-vous et respirez de l'air frais. S'il y a contact avec la peau lavez la région affectée avec de l'eau et du savon. Si les symptômes persistent consultez votre médecin.

POUR PLUS D'INFORMATION, CONSULTEZ LA FEUILLE DE DONNÉES DE SÉCURITÉ.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum products may slip during handling or transportation.

PRODUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. Steel containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE CAUTION.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.
Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.
Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. Si chauffé, de l'oxyde de cuivre, de zinc, de nickel, d'étain, de cadmium et/ou des vapeurs de plomb pourraient s'échapper. Les produits d'aluminium peuvent glisser lors de leur manipulation ou transportation.
TOUS LES PRODUITS DOIVENT ÊTRE ATTACHÉS SOLIDEMENT LORS DU TRANSPORT ET DE LA MANIPULATION.
Lors de la coupe, les courroies d'acier peuvent rebondir et causer des blessures. MANIPULEZ AVEC PRÉCAUTION.
En cas d'une surexposition aux émanations, retirez-vous et respirez de l'air frais. S'il y a contact avec la peau lavez la région affectée avec de l'eau et du savon. Si les symptômes persistent consultez votre médecin.
POUR PLUS D'INFORMATION, CONSULTEZ LA FEUILLE DE DONNÉES DE SÉCURITÉ.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.
Une surexposition aux poussières ou aux émanations durant la soudure, la coupe ou chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.
Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. Si chauffé, de l'oxyde de cuivre, de zinc, de nickel, d'étain, de cadmium et/ou des vapeurs de plomb pourraient s'échapper. Les produits d'aluminium peuvent glisser lors de leur manipulation ou transportation.
TOUS LES PRODUITS DOIVENT ÊTRE ATTACHÉS SOUDEMENT LORS DU TRANSPORT ET DE LA MANIPULATION.
Lors de la coupe, les courroies d'acier peuvent rebondir et causer des blessures. MANIPULEZ AVEC PRÉCAUTION.
En cas d'une surexposition aux émanations, retirez-vous et respirez de l'air frais. S'il y a contact avec la peau lavez la région affectée avec de l'eau et du savon. Si les symptômes persistent consultez votre médecin.
POUR PLUS D'INFORMATION, CONSULTEZ LA FEUILLE DE DONNÉES DE SÉCURITÉ.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum [illegible] may slip during handling or transportation.

PRODUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. [illegible] containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE CAUTION.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.
Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.
Pour ce qui est des alliages de cuivre et de laiton, un contact avec certains acides pourrait dégager des gaz hydrogène explosifs et inflammables. Si chauffé, de l'oxyde de cuivre, de zinc, de nickel, d'étain, de cadmium ɑ/ou des vapeurs de plomb pourraient s'échapper. Les produits d'aluminium peuvent glisser lors de leur manipulation ou transportation.
TOUS LES PRODUITS DOIVENT ÊTRE ATTACHÉS SOLIDEMENT LORS DU TRANSPORT ET DE LA MANIPULATION.
Lors de la coupe, les coupons d'acier peuvent rebondir et causer des blessures. MANIPULEZ AVEC PRÉCAUTION.
En cas d'une surexposition aux émanations, retirez-vous et respirez de l'air frais. S'il y a contact avec la peau lavez la région affectée avec de l'eau et du savon. Si les symptômes persistent consultez votre médecin.
POUR PLUS D'INFORMATION, CONSULTEZ LA FEUILLE DE DONNÉES DE SÉCURITÉ.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with solids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum ...ts may slip during handling or transportation.

...DUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. ...steel containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE ...ON.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

ACIER, ACIER INOXYDABLE, ALUMINIUM, LAITON, CUIVRE, NICKEL ET ACIER SPÉCIALISÉ

Les produits mentionnés ci-haut, à l'état brut, ne causent aucun danger au contact, en cas d'inhalation ou d'ingestion.
Une surexposition aux poussières ou aux émanations durant la soudure, la coupe au chalumeau, le meulage ou l'usinage pourrait résulter en une irritation des voies respiratoires ou de la peau ou autres maladies. UNE VENTILATION ADÉQUATE EST DE MISE AINSI QU'UN ÉQUIPEMENT PROTECTEUR APPROPRIÉ.

REPORT N. / Rapporto N.	TC-018189-16-0001	Issued on / Revised on	02/09/2016	Customer / Cliente	ALLIED FITTING CANADA	Job n. / Com. n.	18189
Revision / Revisione	0	According to / In accordo a	EN 10204:2004 / UNI EN 10204:2005	Type / Tipo	3.1	Page n./ Pagina n.	25 of 25
					172 TURBO DRIVE SHERWOOD PARK, ALBERTA T8H 2J6 - CANADA	Purchase order and project/Ordine e progetto	62216AMG

We hereby certify that all items supplied for the above purchase orders meet all the requirements of the applicable specification of manufacture, the purchase item descriptions, purchase specifications and purchase order requirements. Visual, dimensional and marking check of items supplied has been carried out by our internal inspectors with satisfactory results.

The chemical and mechanical values shown on the EN 10204 certificate are true copy of the mill test certificate issued by the steel mill, or by the laboratory that determined it. All material is certified to be mercury free and free from radioactivity contamination. No weld repair was performed. Marking was performed by low stress stamps in accordance with MSS SP25.
Manufacturing standards:
- 45° and 90° elbows, tees, crosses, full and half couplings, caps, square, hexagonal and round plugs, hexagonal and flush bushings are manufactured in accordance with ASMEB.16.11; threads in accordance with ANSI/ASME B1.20.1.
- Outlet branches are manufactured in accordance with: ASME B.31.1, B.31.3 and MSS-SP-97
- Seamless swage nipples are manufactured in accordance with: BS3799-74 or MSS SP95-86
- Seamless pipe nipples are manufactured in accordance with: B36.10-95 or B36.19-85
- Flanged outlet branches are manufactured in accordance with: ASME B.31.1, B.31.3 and B.16.5
- Unions are manufactured in accordance with: BS 3799 or MSS SP-83

When the length of flanged nipolet is not specified in the description, it is 150 mm.
The material is according to ASTM and ASME Boiler and Pressure Vessel Code Section II.
When the Edition/Revision of the listed standards is not mentioned, it is assumed to be the latest.

Yield strength detected by 0.2% off-set method
Austenitic and duplex stainless steels have been pickled and passivated. Machined surfaces do not require pickling and passivation.

M.E.G.A. is approved with certificate 75/2002/MUC by T.U.V. (certification Body N.0036) to issue certificate of specific product control in accordance with the Pressure Equipment Directive 97/23/EC (PED) Annex 1, Paragraph 4.3.
Testing equipment used:
- Tensile test machine Galdabini Quasar 250 serial No. VAOG – Procedure MAC-03 Rev. 1
- Impact test Cermac JB-W500 serial No. 04031 – Procedure MAC-04 Rev. 1
- Brinell Hardness test Wolpert Dia Testor 2RC serial No. 8900298/0001 – Procedure MAC-05 Rev. 1
- Rockwell Hardness test EMCO Test DJ10 Serial No. 255 - Procedure MAC-06 Rev. 1
- Chemical analysis spectrometer Baird DV4 serial No. P017 (ASTM E415 and E1086) – Procedure QC-07 Rev. 0

The product are manufactured in Italy.

1: MATERIAL ACCORDING TO NACE MR0175/ISO 15156-1-2-3 Ed.2009. MATERIAL ACCORDING TO NACE MR0103 Ed.2012

2: MATERIAL ACCORDING TO ASME Sect. II Part. A 2015 Edition.

A: CE = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 | B: PREN = Cr + 3.3Mo + 16N

C: X factor = (10P + 5Sb+4Sn+As)/100 - elements expressed in ppm

D: J factor = ((Mn + Si)(P + Sn)) x 10E4

Additional elements:

Purchase order and project/Ordine e progetto: 91015AMG

We hereby certify that all items supplied for the above purchase orders meet all the requirements of the applicable specification of manufacture, the purchase item descriptions, purchase specifications and purchase order requirements. Visual, dimensional and marking check of items supplied has been carried out by our internal inspectors with satisfactory results.

The chemical and mechanical values shown on the EN 10204 certificate are true copy of the mill test certificate issued by the steel mill, or by the laboratory that determined it. All material is certified to be mercury free. No weld repair was performed. Marking was performed by low stress stamps in accordance with MSS SP25.
Manufacturing standards:
- 45° and 90° elbows, tees, crosses, full and half couplings, caps, square, hexagonal and round plugs, hexagonal and flush bushings are manufactured in accordance with ASME B.16.11; threads in accordance with ANSI/ASME B1.20.1.
- Outlet branches are manufactured in accordance with: ASME B.31.1, B.31.3 and MSS-SP-97
- Seamless swage nipples are manufactured in accordance with: BS3799-74 or MSS SP95-85
- Seamless pipe nipples are manufactured in accordance with: B36.10-95 or B36.19-85
- Flanged outlet branches are manufactured in accordance with: ASME B.31.1, B.31.3 and B.16.5
- Unions are manufactured in accordance with: BS 3799 or MSS SP-83

When the length of flanged nipolet is not specified in the description, it is 150 mm.
The material is according to ASTM and ASME Boiler and Pressure Vessel Code Section II.
When the Edition/Revision of the listed standards is not mentioned, it is assumed to be the latest.

Yield strength detected by 0.2% off-set method
Austenitic and duplex stainless steels have been pickled and passivated. Machined surfaces do not require pickling and passivation.

M.E.G.A. is approved with certificate 75/2002/MUC by T.U.V. (certification Body N.0036) to issue certificate of specific product control in accordance with the Pressure Equipment Directive 97/23/EC (PED) Annex 1, Paragraph 4.3.
Testing equipment used:
- Tensile test machine Galdabini Quasar 250 serial No. VAOG – Procedure MAC-03 Rev. 1
- Impact test Cermac JB-W500 serial No. 04031 – Procedure MAC-04 Rev. 1
- Brinell Hardness test Wolpert Dia Testor 2RC serial No. 8900298/0001 – Procedure MAC-05 Rev. 1
- Rockwell Hardness test EMCO Test DJ10 Serial No. 255 - Procedure MAC-06 Rev. 1
- Chemical analysis spectrometer Baird DV4 serial No. P017 (ASTM E415 and E1085) – Procedure QC-07 Rev. 0

The product are manufactured in Italy.
