**Re: Design Report for CP8, CP8 Thermal Berm, Channel13, Channel14, B7North Thermal Berm, and B7West Thermal Berm, Meliadine Gold Mine, Nunavut**

Dear Mr. Shaikh,

Agnico Eagle Mines Limited is writing to request approval from the Nunavut Water Board for Design Report for CP8, CP8 Thermal Berm, Channel13, Channel14, B7North Thermal Berm, and B7West Thermal Berm.

The amended Water Licence, approved in November 2024, permits Agnico Eagle to expand the existing Tailings Storage Facility (TSF) and construct additional Water Management Infrastructure (WMI) to manage runoff.

The purpose of Channel13 and Channel14 is to collect and divert the runoff water from the proposed TSF Expansion catchment area to CP3 and CP8, respectively. CP8 will collect and store runoff water from the TSF Expansion and temporarily store water during operation. A water pumping system will be installed in CP8 to transfer the water from CP8 to CP1, the main water attenuation pond at the Meliadine Mine.

Please do not hesitate to contact us should you require additional information or clarification.

Kind regards,

**Jade Robitaille** | Compliance Counselor
