Hello Karen,

As per Part F Item 9 of WL 2AM-MEL1631,

“The Licensee shall submit to the Board for approval in writing an Operation and Maintenance Manual(s) for the Wastewater Treatment Plant(s), including the Sewage Treatment Plant, at least ninety (90) days prior to the construction/installation of facilities, prepared in accordance with the “Guidelines for the Preparation of an Operation and Maintenance Manual for Sewage and Solid Waste Disposal Facilities in the Northwest Territories; 1996”. The Manual(s) shall include sludge management and disposal information and contingency measures in the event of plant malfunction.”

Definition of wastewater: means the water generated by site activities or originates on-site that requires treatment or any other water management activity

Questions:

- We were planning on preparing a manual for the Final Effluent Treatment Plant (for Effluent being discharged from CP1 into Meliadine Lake). Is that your expectation too?
- Water collected within the perimeter of the permanent landfarm will be treated using an oil separator before being discharged into CP1. The system will be fairly simple and thus we were wondering if we should submit an OMM for this too?

Many thanks,

**Manon Turmel**
